1. Brief description of Event (50-100 words):

The 16th edition of the International Conference on Communication in Healthcare (ICCH) that brings together teachers, researchers, practitioners and policy makers within the field of healthcare communication.

2. What were the benefits of attending and what did you gain from the experience in terms of transferable skills and knowledge.

I had the opportunity to facilitate a pre-conference workshop on visual design in healthcare communication research, together with a Service Designer from the Mayo Clinic. I learned that we managed to strike the right balance between practical tips and theoretical background, and the session has increased my confidence in facilitating interactive sessions. I also got to know an international group of professionals who are interested in using visual communication in their research.

3. What actions will you be taking as a result of attending or by making new networking contacts.

Continue to fine-tune the workshop, host it again in different settings, and explore new ways to collaborate with the co-facilitator and participants of the workshop.

4. Can you share any additional resources produced in connection with the event (e.g. feedback from participants, training resources, website links, and additional materials).

Participant feedback:
5. Tips/experience learned from the event

As you can see from the suggestions, there are areas within the topic of visual design in health communication research that can be explored in more depth. There is also a need for a list of resources of visual tools and references.

6. Any additional comments or information regarding the event
