School of Mathematics & Statistics

Head of School
Professor A W Hood

Degree Programmes
Graduate Diploma: Mathematics
Statistics

M.Sc.: Mathematics
Statistics

Programme Requirements

Mathematics
Graduate Diploma: A total of 120 credits from MT modules at 3000 level and above, including at least 60 credits at 5000 level, the course of study to be approved by the Head of School.

M.Sc.: 120 credits as for Graduate Diploma together with a dissertation (MT5099) comprising three months’ full-time study, which will carry 60 credits.

Statistics
Graduate Diploma: A total of 120 credits from MT modules at 3000 level and above, including at least 60 credits at 5000 level, the course of study to be approved by the Head of School.

M.Sc.: 120 credits as for Graduate Diploma together with a dissertation (MT5099) comprising three months’ full-time study, which will carry 60 credits.

Modules
The anti-requisite for each module is the corresponding 4000 level module.
The prerequisites for each module may be replaced by equivalent material from other institutions.

MT5099 Dissertation for M.Sc. Programme/s
Credits: 60.0
Prerequisite: An average grade of at least 14 in course work. Candidates whose average grade falls in the range 12-13 may be allowed to proceed at the discretion of the Head of School.
Programme(s): Compulsory module for Mathematics and Statistics M.Sc. Postgraduate Programmes
Description: Student dissertations will be supervised by members of the teaching staff who will advise on the choice of subject and provide guidance throughout the progress of the dissertation. The completed dissertation of not more than 15,000 words must be submitted by the end of August.
Class Hour: At times to be arranged with the supervisor
Teaching: Individual Supervision
Assessment: Dissertation = 100%
Mathematics & Statistics – 5000 Level Modules

MT5611 Advanced Symbolic Computation
Credits: 20.0  Semester: 2
Prerequisite: at least one MT4000 level module
Anti-requisite: MT4111
Programme(s): Optional module for Mathematics and Statistics Postgraduate Taught Programmes. The course of study must be approved by the Head of School.
Description: This module aims to enable students to use Maple as a tool in their other modules and to turn naturally to such a package when solving mathematical problems. The module aims to illustrate the following points: a symbolic computation package allows one to conduct mathematical experiments; a symbolic computation package allows one to collect data about a problem being studied. This is similar to the way other scientists work. It is easier to try several different approaches to a problem and see which works. The machine is stupid. Intelligence comes from the user. The user thinks, the user interprets, the computer calculates. Students will undertake a more substantial project than that required for MT4111.
Class Hour: 9.00 am.
Teaching: Two lectures, one tutorial
Assessment: Project = 45%, 2 Hour Examination = 55%

MT5613 Advanced History of Mathematics
Credits: 20.0  Semester: 1
Prerequisites: one of MT4003, MT4004, MT4005 (or MT4603 – MT4605)
Anti-requisite: MT4501
Programme(s): Optional module for Mathematics and Statistics Postgraduate Taught Programmes. The course of study must be approved by the Head of School.
Description: The overall aim of the module is to give students an insight into the historical development of mathematics and an opportunity to research into one particular topic in some depth. This module is taught in parallel with MT4501.
Class Hour: 12.00 noon.
Teaching: Two lectures and one tutorial.
Assessment: Project = 25%, 2 Hour Examination = 75%

MT5705 Advanced Multivariate Analysis
Credits: 20.0  Semester: 2
Prerequisites: MT3606 and any MT4000 level module
Anti-requisite: MT4609
Programme(s): Optional module for Mathematics and Statistics Postgraduate Taught Programmes. The course of study must be approved by the Head of School.
Description: This module consists of MT4609 with the addition of directed reading on more advanced aspects of the subject and the requirement for students to analyse a data set. The syllabus includes: properties of the multivariate normal distribution; checking multivariate normality; hypothesis testing; the likelihood ratio and union-intersection principles; one-sample and two-sample Hotelling T^2 tests; tests on covariance matrices; tests of independence; discriminant analysis; principal components analysis; canonical correlation; analysis of data using a computer package.
Class Hour: 11.00 am.
Teaching: Two lectures and one tutorial.
Assessment: Project = 25%, 2 Hour Examination = 75%

MT5752  Modelling Ecological Dynamics
Credits: 20.0  Semester: 2 (4 weeks)
Prerequisites: at least one MT4000 level module
Programme(s): Compulsory module for M.Res. Environmental Biology and M.Res. in Environmental Biology Conversion for Mathematical, Physical and Molecular Sciences Postgraduate Taught Programmes.
Description: This module is designed to provide practical training in the construction and use of mathematical models of ecological dynamic systems. The module will start by covering basic dynamical concepts and mathematical tools, and will then cover modelling of individuals, single species populations, interacting populations and ecosystems. At all stages students will be expected to build and analyse models, with a combination of pencil and paper and computer software.
Class Hour: To be arranged.
Teaching: 4 lectures, one tutorial and 3 practicals each week for 4 weeks.
Assessment: Continuous Assessment = 33%, 2 Hour Examination = 67%

MT5753  Statistical Modelling
Credits: 20.0  Semester: 1 (4 weeks)
Prerequisites: at least one MT4000 level module
Programme(s): Compulsory module for M.Res. Environmental Biology and M.Res. in Environmental Biology Conversion for Mathematical, Physical and Molecular Sciences Postgraduate Taught Programmes.
Description: This course will introduce the main ideas of linear and generalised linear statistical modelling and will provide training in applied statistical modelling. The course structure is as follows: what statistical models are and what they are for; distributions, point and interval estimation and hypothesis testing; simple linear regression models for normal data; multiple regression; multiple regression with qualitative explanatory variables; less linear models for non-normal data; generalized linear models. Lectures will be built around the book “An Introduction to Statistical Modelling” (Krzanowski, 1998), which closely matches what we believe to be an ideal course structure.
Class Hour: To be arranged.
Teaching: 4 lectures, one tutorial and 3 practicals each week for 4 weeks.
Assessment: Continuous Assessment = 33%, 2 Hour Examination = 67%

MT5802  Advanced Analytical Techniques
Credits: 20.0  Semester: 2
Prerequisite: MT4508 or MT4511 or MT4005 (or MT4605)
Programme(s): Optional module for Mathematics and Statistics Postgraduate Taught Programmes. The course of study must be approved by the Head of School.
Description: This module introduces students to some further important applied analytic techniques such as Variational Calculus, Integral equations and transforms, and the theory of Steepest Descent.
Class Hour: 12.00 noon.
Teaching: Two lectures and one tutorial.
Assessment: Two-and-a-half Hour Examination = 100%
MT5804 Advanced - The Sun
Credit: 20.0  Semester: 1
Prerequisite: MT2003, MT3601 or MT4601, final year students only
Anti-requisite: MT4504, MT4510, MT5810
Programme(s): Optional module for Mathematics and Statistics Postgraduate Taught Programmes. The course of study must be approved by the Head of School.
Description: This module consists of MT4504 with the addition of directed reading on more advanced aspects of the subject and a requirement for students to carry out a detailed analytical investigation of a particular system or a detailed literature survey of a specific area. The syllabus includes: observations of the Sun and its magnetic phenomena; the equations of magnetohydrodynamics, their properties and application to solar magnetism; convection and diffusion of magnetic field; magnetic equilibria, force-free fields, magnetic flux tubes; MHD waves; waves in magnetic flux tubes, intense tubes, sunspots, coronal loops; coronal heating; prominences; Solar wind; helioseismology.
Class Hour: 12.00 noon
Teaching: Two lectures and one tutorial.
Assessment: Two-and-a-half Hour Examination = 100%

MT5806 Advanced Computational Techniques
Credit: 20.0  Semester: 2
Prerequisite: MT3802 (or MT4502) and one of either (MT4111 or MT5611) or (MT4112 or MT5612)
Anti-requisite: MT4506
Programme(s): Optional module for Mathematics and Statistics Postgraduate Taught Programmes. The course of study must be approved by the Head of School.
Description: This module introduces students to some of the ideas, techniques and constraints that underpin modern approaches to the numerical modelling of physical processes that may be described by partial differential equations. Students will gain expertise in implementing standard methods and will submit a short dissertation together with a portfolio of computational work.
Class Hour: 12.00 noon.
Teaching: Two lectures and one tutorial.
Assessment: Project = 25%, 2 Hour Examination = 75%

MT5809 Advanced Fluid Dynamics
Credit: 20.0  Semester: 1
Prerequisite: MT4509
Programme(s): Optional module for Mathematics and Statistics Postgraduate Taught Programmes. The course of study must be approved by the Head of School.
Description: This module will examine current research in fluid dynamics, with a particular focus on meteorology and oceanography. The large-scale atmosphere and oceans behave quite unlike a ‘classical’ fluid owing to the presence of stable density stratification and rotation. As a result, the fluid motion is dominated by slow, ‘vortical’ or eddying motions (like cyclones) which generally spin slower than the Earth. Superimposed on this slow motion are relatively fast wave-like motions analogous to surface waves on a pond. These lectures describe the mathematical basis of these fundamentally different types of motion, and furthermore illustrate the increasingly important role of computer modelling in this research.
Class Hour: 11.00 am.
Teaching: Two lectures and one tutorial.
Assessment: Two-and-a-half Hour Examination = 100%
MT5824  Topics in Groups
Credits: 20.0 Semester: 1
Prerequisite: MT4003 (or MT4603)
Programme(s): Optional module for Mathematics and Statistics Postgraduate Taught Programmes. The course of study must be approved by the Head of School.
Description: The overall aim of this module is to build on the foundations established in MT4003/MT4603, and take the students further into this important and beautiful branch of mathematics. More specifically, through a selection of topics, some of which will be of current research interest in St Andrews, it will introduce students to advanced techniques of handling groups and classifying them.
Class Hour: 10.00 am.
Teaching: Two lectures and one tutorial.
Assessment: Project =25%, 2 Hour Examination = 75%

MT5825  Topics in Modern Analysis
Credits: 20.0 Semester: 1
Prerequisite: MT4004 (or MT4604)
Anti-requisite: MT4525
Programme(s): Optional module for Mathematics and Statistics Postgraduate Taught Programmes. The course of study must be approved by the Head of School.
Description: This module introduces some of the powerful techniques and ideas of modern mathematical analysis that are important both in analysis in its own right and in its many applications in mathematics and science. The module will include topics such as: measure theory, the ergodic theorem, martingale theory. Analysis is one of the active research areas within the School, and the choice of topics will reflect current activity.
Class Hour: 10.00 am.
Teaching: Two lectures and one tutorial.
Assessment: Project =25%, 2 Hour Examination = 75%

MT5827  Lie Algebras
Credits: 20.0 Semester: 2
Prerequisite: MT3501 and (MT4003/MT4603 or MT4517)
Programme(s): Optional module for Mathematics and Statistics Postgraduate Taught Programmes. The course of study must be approved by the Head of School.
Description: The aim of this module is to classify the semi-simple Lie algebras over an algebraically closed field. Lie algebra has important applications to theoretical physics and is used in the classification of finite simple groups.
Class Hour: 11.00 am.
Teaching: Two lectures and one tutorial.
Assessment: Two-and-a-half Hour Examination = 100%

MT5828  Hyperbolic Geometry
Credits: 20.0 Semester: 2
Prerequisite: MT4004 (or MT4604)
Programme(s): Optional module for Mathematics and Statistics Postgraduate Taught Programmes. The course of study must be approved by the Head of School.
Description: This module introduces some of the techniques and ideas of hyperbolic geometry including Fuchsian groups, Kleinian groups, Riemann surfaces, fractal geometry.
Class Hour: 9.00 am.
Teaching: Two lectures and one tutorial.
Assessment: Two-and-a-half Hour Examination = 100%
MT5831  Advanced Bayesian Inference

Credits: 20.0  Semester: 2
Prerequisite: MT3701 or MT4606
Anti-requisite: MT4531
Programme(s): Optional module for Mathematics and Statistics Postgraduate Taught Programmes. The course of study must be approved by the Head of School.

Description: This module consists of MT4531 with an additional project which will give consideration to some more advanced aspects of the theory or to the application of Bayesian techniques. This may involve either directed reading or the use of the computer for simulation or data-based analyses. The syllabus includes Bayes’ theorem, inference for Normal samples; univariate Normal linear regression; principles of Bayesian computational, Markov chain Monte Carlo – theory and applications.

Class Hour: 10.00 am
Teaching: Two lectures and one tutorial and practical classes.
Assessment: Project = 40%, 2 Hour Examination = 60%

MT5835  Wildlife Population Assessment

Credits: 20.0  Semester: 2
Prerequisites: MT3606 and any MT4000 level module
Anti-requisite: MT4535
Programme(s): Optional module for Mathematics and Statistics Postgraduate Taught Programmes. The course of study must be approved by the Head of School.

Description: This module is intended to enable students to design appropriate surveys for assessing abundance of an animal population, to formulate simple statistical models for survey data and derive estimators, to analyse data competently, and to conduct a small survey from conception to the production of a final project report. The syllabus includes: likelihood framework for distance sampling; general estimating equation; line and point transects; clustered populations and size-biased sampling; stratification and covariates; variance and interval estimation; the bootstrap; estimation when detection at the line or point is not certain; survey design; field methods; related methods; including strip transects, quadrat counts; monitoring trends in abundance; mark-recapture and recovery methods; removal methods; catch per unit effort; change-in-ratio.

Class Hour: To be arranged.
Teaching: Two lectures and one laboratory.
Assessment: Advanced Project Report = 45%, 2 Hour Examination = 55%

MT5990  Independent Study module

Credits: 20.0  Semester: either
Prerequisite: Permission of the Head of School
Programme(s): Optional module for Mathematics and Statistics Postgraduate Taught Programmes. The course of study must be approved by the Head of School.

Description: This module provides the opportunity for a student to study an Advanced topic as a reading course under the supervision of a member of staff. The topic will be disjoint from those available in other modules.

Assessment: Two-and-a-half Hour Examination = 100%

MT5999  Advanced Project in Mathematics/Statistics

Credits: 40.0  Semester: Whole Year
Prerequisite: Entry to an MSci, MPhys or MMath programme
Programme(s): Optional module for Mathematics and Statistics Postgraduate Taught Programmes. The course of study must be approved by the Head of School.

Description: This is a more substantial project which, for MSci and MMath students, will replace the existing Honours project. The project will be chosen from an approved list of topics. The student will be required to investigate a topic in some depth, submit a report by the end of April and give a presentation.

Assessment: Project = 100%
