This module provides an introduction to sustainable development. First, it introduces the history and application of the concept of sustainable development. Second, there is a series of disciplinary-based lectures that describe the nature and functioning of the social, political, economic and physical, and systems that combine to create the world that we can observe around us. Specific material will also be presented that links these various aspects together and explores their interactions.

In addition, this module will have a short induction component to it during the pre-sessional week of term which has a three-fold purpose: (i) to introduce students to the shape of the degree program and St Andrews, (ii) allow students to explore their existing skill base and identify what skills require further work and (iii) provide a context (in the form of a field trip) within which to start an investigation of what interdisciplinarity entails. This will entail two one-day seminars.

**Programme module type:** Compulsory for the Postgraduate Diploma, MSc and MRes Sustainable Development and MSc Sustainable Energy Postgraduate Programmes.

**Required for:**

**Learning and teaching methods and delivery:** Weekly contact: 1 x 3-hour seminar

**Assessment pattern:** 2-hour Written Examination = 50%, Coursework = 50%

In part one, the module will focus on how to design and produce a research dissertation. Assessment will be in the form of a critical essay that analyses the research design of papers from your disciplinary field. In part two, issues of professional development (e.g. ethics, careers, grant writing) will be addressed. Assessment will be in the form of a class test in which you will review and comment on two research proposals.
