The last two decades have witnessed a surge of research on social and technical intelligence, both in humans and an increasingly wide range of non-human animal species. This module surveys the principal discoveries, integrating field and captive studies, as well as both observational and experimental methodologies, to trace the evolution and development of aspects of social intelligence such as imitation and theory of mind, and technical intelligence, such as tool use and understanding of causality. Key aims include appreciating the range of methodologies that have been developed and how these can be used to trace the evolution and ontogeny of the underlying psychological mechanisms.

**Programme module type:** Optional for MSc Evolutionary and Comparative Psychology: the Origins of Mind.

**Learning and teaching methods and delivery:**
- **Weekly contact:** 2-hour seminars plus office hour.
- **Scheduled learning:** 33 hours
- **Guided independent study:** 117 hours

The module will offer a comparative approach to the emergence of the ability to understand mental states in children and non-human primates, and its alteration in autism. This ability (also known as Theory of Mind) is at the heart of many of humans unique cognitive achievements, but their origins can be traced back in evolution and development. The course will discuss the current state of research in this area, emphasising both empirical and conceptual aspects posed by the combination of the evolutionary and developmental approaches.

As research becomes ever more computationally intense, the ability to use modern research software is becoming indispensable. This practical module will offer an introduction to computational modelling and provide you with the skills necessary to apply it in your research. Emphasis will be put on using scientific scripting languages in a research context. This module will build on the statistical techniques learned in previous modules and introduce modelling techniques, and imaging, stimulus presentation, and data visualisation.

**Planned timetable:**

To be arranged with the supervisor.

The student will carry out a major piece of original and independent research under the guidance of an academic supervisor. Under normal circumstances the research will be planned during the academic semesters and then conducted during the summer after successful completion of the other MRes modules. Supervision will be regular and will normally average approximately one hour every two weeks. The aim of the module is to give the student an opportunity to develop expertise in designing, conducting and analysing psychological research, and also to learn how to present such work in writing.

**Programme module type:** Compulsory for MRes in Psychology and for the MSc Psychology (Conversion).

**Learning and teaching methods and delivery:**

*Weekly contact:* Personal tutorials at approximately 2-weekly intervals.

**Assessment pattern:**

15,000 word (maximum) research report

This module introduces students to the various skills and issues that are of importance to academic psychologists irrespective of their particular area of research. Weekly seminars will cover the various topics, such as academic presentations (published writing, talks, posters), the use of technology in order to enhance communication, how to read research reports, how to gain ethical approval for research, and how to build an academic career.

**Programme module type:** Compulsory for MRes in Psychology. Compulsory for MSc in Health Psychology. Optional for MSc - Evolutionary and Comparative Psychology: the Origins of Mind.

**Co-requisite(s):** All seven modules are to be taken together in the same session. The ‘same session’ requirement may be waived at the discretion of the Head of School.

**Learning and teaching methods and delivery:** Weekly contact: 17 x 2-hour seminars.

**Assessment pattern:** 10 elements of Coursework

This module aims to ensure that students are competent in the use of advanced data analysis in psychology. This includes advanced training in common statistics (including regression, analysis of variance and multivariate techniques) plus additional training in qualitative methods. Students will also study more complex topics such as statistical modeling.

**Programme module type:** Compulsory for MSc Evolutionary and Comparative Psychology: the Origins of Mind, MSc Psychology (Conversion), MSc in Health Psychology, MRes in Psychology

**Learning and teaching methods and delivery:** Weekly contact: 11 x 2-hour workshops.

This module serves to introduce distinct ways of studying the origins of mind within a comparative Tinbergenian framework, emphasising both functional and mechanistic accounts; why capacities exist, how they are implemented, how they evolved and how they develop. Lectures will cover general evolutionary theory and: (1) Comparative/Phylogenetic, (2) Developmental, (3) Mechanistic/causal, and (4) Functional/adaptive approaches. 'Hot' research topics will be presented using particulars of these frameworks and will exemplify the spectrum of methods possible to address the origins of mind.

Programme module type: Compulsory for MSc Evolutionary and Comparative Psychology: the Origins of Mind.

Co-requisite(s): PS5005, PS5011, PS5012, PS5013

This module will explore the evolution of human language and animal communication through the comparative study of communication and cognition in humans and a variety of non-human species. The module will include detailed analysis of multiple empirical approaches used in cutting-edge research in both field and laboratory. The module integrates evolutionary theory, behavioural ecology, ethology, linguistics and psychological theory to account for how and why humans and other species have evolved their unique communication skills. An important focus will be on empirical methods of testing various theories proposed for the evolution of communication and language.

This module focuses on the origins of human cognition from evolutionary and developmental perspectives. How do we come to parse the ‘blooming buzzing confusion’ of cues from our physical and social environments into meaningful representations that support functionally adaptive behaviour? In the physical world are objects, their properties and the causal underpinnings of their interactions. The social world contains agents, their actions, and their mental states. How does cognitive processing reveal cues and build representations about the causal structure of the physical and social world? This course examines how these features are perceived and processed by developing humans and other animals for adaptive behaviour, and investigates the evidence for the proximate mechanisms underlying the abilities seen. The module links together the evolution and development of different cognitive abilities with a focus on empirical comparative research.

This aim of this module is to acquire research skills within the domain of evolutionary psychology. Students will conduct and report a research project from an evolutionary perspective. Projects may comprise field and/or laboratory-based studies, the analysis (including meta-analysis) of extant data, or the critical review and evaluation of existing literature. Students will need to demonstrate substantive contribution to the project and that the work is original. The thesis can be in any area of evolutionary psychology agreed by the student’s supervisor and course coordinator, and approved by ethical review.

Planned timetable: To be arranged.

The primary aim of this module would be that the student gains some practical, hands-on experience, albeit rather briefly, of a number of laboratory techniques and research methodologies as are employed by the Principal Investigators in the School of Psychology and Neuroscience. Across the course the student would experience a wide variety of methods and research practices and thereby become more aware of the possibilities of an integrative approach. The course would entail one weekly session (approx. 5 hours per week) during which the student would spend a session in the laboratory of a PI (Principal Investigator). This module would cover the research design, data collection, data analysis and the publication style of each PI. The PI would demonstrate the methodology, data collection and data analysis relevant to that laboratory and to the field in which the PI works. This may include an introductory lecture or discussion of literature relevant to the PI’s field and would be followed by observation of, and basic training in the specific techniques used by the PI in conducting that research. The student would be involved in any data collection that may take place during that session, be made aware of the way in which those data are analysed by that PI’s group and then shown how those results are prepared for publication and other dissemination.

This supervised review will compare and contrast different theoretical and methodological approaches to a particular topic in the study of the mind. The aim of this module is to encourage students to gain a clear picture as to what is unique about an evolutionary approach to the study of the mind, how it differs from other psychological approaches, and to gain an appreciation of the strengths and weaknesses of such an approach. Suitable topics for review will be chosen by agreement with the student’s supervisor and the Course Controller.

Postgraduate Certificate/Diploma/MSc by Distance Learning: Adults with Learning Disabilities who have Significant and Complex Needs Programme

These modules are designed as training for staff working in learning/intellectual disability services, to update current knowledge and good practice, and to teach the specific skills necessary to undertake a career as a research practitioner in learning disability services.

Co-requisite(s): All four Postgraduate Certificate modules to be completed within 12 months. All six Postgraduate Diploma modules are to be completed within 12 months. Assessment of Postgraduate MSc is by a 15,000-word Research Project and write up.

Modules
A choice of 4 from 6 postgraduate modules (CE5001 - CE5006) delivered by distance learning, comprises the core of the Postgraduate Certificate. These modules (CE5001 - CE5006) may also be taken as single modules. At Postgraduate Diploma level, a set of 6 modules (PS5101 - PS5016) or (PS5401 - PS5406) are the basic research practitioner training.

The module investigates how mental health difficulties reveal themselves in people with intellectual disabilities and how they may be diagnosed. Also investigated, through evidence based practice: different types of mental health difficulties, a range of responses by front-line staff to such difficulties, methods of assessment and courses of treatment, residential and non-residential mental health services, and ethical and legal issues related to mental health difficulties.

The module investigates how services support people who have an intellectual disability and/or mental health condition and who have either been convicted of an offence indicating a risk to the public or have exhibited behaviour indicating pro-active management is required. It aims to improve students’ ability to assess social and healthcare needs and management of forensic services in order to enhance quality of life and preserve individual rights as the person with intellectual disabilities. Case studies of individuals and of services are used to illustrate the complexity of this area of work, and to demonstrate best practice.

The module aims to increase understanding of the complex social and health care needs of adults with profound and multiple intellectual disabilities. Students will investigate the requirements of good service provision for this group and provide examples of how community presence and participation can be achieved. The role of family carers in long term support is also researched.

Programme module type: Optional for the Postgraduate Certificate programme: Adults with Learning Disabilities who have Significant and Complex Needs.

The module investigates the history of and settings for victimisation and abuse of vulnerable individuals, in the context of adult support and protection. Students are asked analyse their own service setting with respect to arrangements that minimise the possibility of victimisation and abuse and develop strategies to deal with suspected or identified incidents of abuse. A number of illustrative case studies are explored. There is also an investigation of the knowledge and skills needed to respond to the needs of those who have been abused in a constructive manner.

The module investigates knowledge and skills needed to support people with intellectual disabilities as they get older and in their later years with respect to their social and health needs (including dementia). The course aims to improve the ability to assess social and healthcare needs and management of services in order to enhance quality of life and preserve individual rights as the person with intellectual disabilities gets older and to increase knowledge of the role and expectations of older family carers.

This distance-learning module is one of six in the postgraduate Diploma programme Adults with Learning Disabilities who have Significant and Complex Needs. It introduces students to the core skills necessary for research in the field of Intellectual Disability, including the following:

- Unit 1: What kinds of questions can be addressed in ID research?
- Unit 2: The practitioner-research
- Unit 3: What are the principal paradigms through which questions may be addressed?
- Unit 4: Research, evaluation and audit
- Unit 5: Theories, concepts and operationalisation
- Unit 6: Ethical issues and ethical permission

The module is appropriate for professionally qualified staff who wish to develop research skills with a view to improving their professional practice.

This distance-learning module is one of six in the postgraduate Diploma programme Adults with Learning Disabilities who have Significant and Complex Needs. It introduces students to the core skills necessary for research in the field of Intellectual Disability, including the following:

- **Unit 1:** Quantitative data: types of measurement; issues in sampling
- **Unit 2:** Qualitative data: sources; issues in sampling
- **Unit 3:** Surveys and Questionnaires
- **Unit 4:** Interviews
- **Unit 5:** Use of standardised assessment instruments
- **Unit 6:** Experimental measurement

The module is appropriate for professionally qualified staff who wish to develop research skills with a view to improving their professional practice.

Postgraduate Certificate by Distance Learning: Adult Support, Protection and Safeguarding Programme

This programme of 6 modules is designed for staff working in supervisory or professional positions in services for older people and adults with learning disabilities or mental health problems. The focus of the programme is on how services can best support and protect vulnerable adults, with reference to legislation, policy and practice.

Co-requisite(s): All 6 Postgraduate Certificate modules (PS5401 - PS5406) to be completed within 12 months.

Modules

A set of postgraduate modules delivered by distance learning composes the core of the basic research practitioner training. Students who successfully complete this Postgraduate Certificate may progress to the Postgraduate Diploma in Adults with Learning Disabilities who have Significant and Complex Needs.

This is a module concerned with an 'Ecological Model' of adult protection. We consider how characteristics of vulnerable adults, perpetrators, relationship and environmental factors must all be taken into account in service agency policies and regulatory frameworks. The topics studied include the individual at risk, settings, legislation and government policy, culture and philosophy and international influences.

**Programme module type:** Compulsory for the Postgraduate Certificate programme: Adult Support, Protection and Safeguarding.

**Pre-requisite(s):** University degree or a prof. qualification (social work / nursing / professions allied to medicine). In some cases substantial relevant experience in a cognate discipline, with at least three years practical management/ supervision will be considered.

**Learning and teaching methods and delivery:**

- **Weekly contact:** 1 introductory seminar - Teaching materials supplied for distance learning, supported by online materials accessed via University websites (Moodle), library electronic databases. University tutor support by email and telephone.

**Planned timetable:** 100 notional hours of learning time (delivered by online distance learning).

This is a module focusing on protective service designs, in the context of adult protection. We look at the importance of service design, culture and policies in health, social services and the voluntary sector. The module analyses the impact of service design on the degree of risk of harm for adults with learning disabilities.

**Programme module type:** Compulsory for the Postgraduate Certificate programme: Adult Support, Protection and Safeguarding.

**Pre-requisite(s):** University degree or a prof. qualification (social work / nursing / professions allied to medicine). In some cases substantial relevant experience in a cognate discipline, with at least three years practical management/supervision will be considered.

**Availability restrictions:** Must be employed full or part-time in health, social or voluntary sector services to older people or adults with learning disabilities or mental health problems.

**Planned timetable:** 100 notional hours of learning time (delivered by online distance learning).

This is a module looking at the international, national and local context of adult protection frameworks. We look at how legislation and policy are translated into regulatory frameworks to protect and safeguard vulnerable adults. Human Rights and ethical issues are considered in a wider international perspective.

**Programme module type:** Compulsory for the Postgraduate Certificate programme: Adult Support, Protection and Safeguarding.

**Pre-requisite(s):** University degree or a prof. qualification (social work / nursing / professions allied to medicine). In some cases substantial relevant experience in a cognate discipline, with at least three years practical management/supervision will be considered.

**Planned timetable:** 9.00 am - 11.00 am and 2.00 pm - 5.00 pm Thu. (second half of semester)

This module presents psychopathological conditions and provides a basic understanding of the underlying neuronal and/or cognitive-behavioural mechanisms. Examples will be drawn from the field of clinical psychology and/or clinical neuropsychology. The module will further explore in detail the tools and procedures used to assess psychopathological conditions by discussing their theoretical/statistical background and by demonstrating how to use these tools in clinical and experimental settings. In addition, the use of these tools will be trained in small group settings.

**Programme module type:** Compulsory for MSc Psychology (Conversion)

**Learning and teaching methods and delivery:** Weekly contact: 1 x 2-hour lecture and 1 x practical/workshop class of up to 3 hours. Additionally 5 x 1-hour tutorials across the semester.

This module explores in depth key topics across the breadth of social psychological enquiry. A variety of research approaches will be examined in order to develop the scientific understanding and critical skills in this field. Approaches that will be covered include social cognition, social identity and the study of intergroup relations. In each case, the strengths and limitations of the approaches are explored, and theoretical knowledge will be linked to current events.

**Programme module type:** Compulsory for MSc Psychology (Conversion)

**Learning and teaching methods and delivery:**

**Weekly contact:** 1 x 2-hour lecture and 1 x practical/workshop class of up to 3 hours. Additionally 5 x 1-hour tutorials across the semester.

This module will address evolutionary and comparative approaches to psychology. The aim is to provide an understanding of major evolutionary forces and how they have shaped animal and human behaviour and psychology. Key principles, concepts and methodologies will be introduced and related to specific topic areas such as the evolution of social behaviour and the evolutionary origins of language and cognition.

**Programme module type:** Either PS5235 or PS5236 is compulsory for MSc Psychology (Conversion)

**Learning and teaching methods and delivery:** Weekly contact: 1 x 2-hour lecture and 1 x practical/workshop class of up to 3 hours. Additionally 5 x 1-hour tutorials across the semester.

The aim of this module is to develop an understanding of visual perception and its functions. Stress will be laid on the integration of findings from physiology, neuropsychology, anatomy, and psychophysics. Topic areas covered will include theories of human vision and their application to understanding our ability to perceive distinct visual properties, for example the shape, size, location and identity of objects. Emphasis will be placed on the development of the skill of critical evaluation of evidence and theory, with particular focus on awareness of the latest issues in the discipline.

**Programme module type:** Either PS5237 or PS5238 is compulsory for MSc Psychology (Conversion)

**Learning and teaching methods and delivery:** Weekly contact: 1 x 2-hour lecture and 1 x practical/workshop class of up to 3 hours. Additionally 5 x 1-hour tutorials across the semester.

**Planned timetable:** 9.00 am - 11.00 am and 2.00 pm - 5.00 pm Thu. (second half of semester)

The aim of this module is to develop an understanding of human memory and attention. Topic areas covered will include theories of attention, short and long-term memory, processes involved in memory encoding, maintenance and retrieval. Emphasis will be placed on the development of the skill of critical evaluation of evidence and theory. Lectures will be accompanied by practical classes, in which students will gain experience of the experimental methods used in cognitive research, and seminars in which research papers will be critically evaluated.

**Programme module type:** Either PS5237 or PS5238 is compulsory for MSc Psychology (Conversion)
