Master of Science Data-Intensive Analysis

Programme Requirements

Data-Intensive Analysis - MSc

MT4113 (15 credits) and MT5753 (20 credits) and MT5756 (20 credits) and
MT5757 (20 credits) and ID5059 (15 credits) and
Between 0 and 30 credits from Module List: CS5001 - CS5003, CS5044, CS5052 and
CS5099 (60 credits) or MT5099 (60 credits)

Further requirements
Students must select 180 credits.

Compulsory modules:

MT4113 Computing in Statistics

The aim of this module is to teach computer programming skills, including principles of good programming practice, with an emphasis on statistical computing. Practical work focusses on the widely-used statistical language and environment R. Practical skills are developed through a series of computing exercises that include (1) modular programming; (2) manipulating data; (3) simulating data with specific statistical properties, (4) investigating behaviour of statistical procedures under failure of statistical assumptions.

Programme module type: Compulsory for Applied Statistics and Datamining and Data-Intensive Analysis MSc programmes.

Learning and teaching methods and delivery: Weekly contact: 1.5-hour lectures (x 10 weeks), 2-hour practical classes (x 10 weeks)

Assessment pattern: 2-hour Written Examination = 40%, Coursework = 60%

Module coordinator: Dr L J Thomas

Module teaching staff: Dr L J Thomas, Dr E Rexstad
### MT5753 Statistical Modelling

<table>

This applied statistics module covers the main aspects of linear models (LMs) and generalized linear models (GLMs). In each case the course describes model specification, various options for model selection, model assessment and tools for diagnosing model faults. Common modelling issues such as collinearity and residual correlation are also addressed, and as a consequence of the latter the Generalized Least squares (GLS) method is described. The GLM component has emphasis on models for count data and presence/absence data while GLMs for multinomial (sometimes called choice-based models) are also covered for nominal and ordinal response outcomes. The largest part of the course material is taught inside an environmental impact assessment case study with reality-based research objectives. Political and medical examples are used to illustrate the multinomial models.

**Programme module type:** Compulsory for Applied Statistics and Datamining MSc Programme. Compulsory for Data-Intensive Analysis MSc programme. Optional for Statistics MSc Programme.

**Anti-requisite(s):**  
MT4607  
Required for: MT5757

**Learning and teaching methods and delivery:**  
**Weekly contact:** 6 hours lectures, 1.5 hours tutorials and 6 hours practicals (x 5 weeks).

**Assessment pattern:**  
2-hour Written Examination = 50%, Coursework = 50%

**Module coordinator:** Ms H Worthington

**Module teaching staff:** Dr H Worthington, Dr L Scott-Hayward

### MT5756 Data Analysis

<table>

This module provides coverage of essential statistical concepts, data manipulation and analysis methods, and software skills in commercial analysis packages. Specifically: the different types of data and their numerical/graphical treatment; data entry/import/export, basic probability theory and concepts of inference; fundamental statistical concepts with particular emphasis on sampling issues; basic statistical models and tests; introductory computer-intensive inference. The widespread commercial statistical packages SAS, SPSS are introduced and utilised with Excel for most analyses. The statistical programming language R is also given brief attention. This module is a short intensive course and is a core, preliminary, requirement for the MSc in Applied Statistics and Datamining. It covers material essential for study of the more advanced statistical methods encountered in subsequent modules.

**Programme module type:** Compulsory for Applied Statistics and Datamining MSc Programme. An exemption may be granted to an appropriately qualified entrant. Compulsory for Data-Intensive Analysis MSc Programme.

**Learning and teaching methods and delivery:**  
**Weekly contact:** Lectures, tutorials and practicals for 4 weeks.

**Assessment pattern:**  
2-hour Written Examination = 60%, Coursework = 40%
## MT5757 Advanced Data Analysis

<table>
<thead>
<tr>
<th>SCOTCAT Credits:</th>
<th>20</th>
<th>SCQF Level 11</th>
<th>Semester:</th>
<th>2</th>
</tr>
</thead>
</table>

**Planned timetable:** 12.00 noon Mon (even weeks), Tue and Thu

This module covers modern modelling methods for situations where the data fails to meet the assumptions of common statistical models and simple remedies do not suffice. This represents a lot of real world data. Methods covered include: nonlinear models; basic splines and Generalised Additive Models; LASSO and the Elastic Net; models for non-independent errors and random effects. Pragmatic data imputation is covered with associated issues. Computer intensive inference is considered throughout. Practical applications build sought-after skills in R and the commercial packages SAS.

**Programme module type:** Compulsory for Applied Statistics and Datamining MSc Programme.
Compulsory for Data-Intensive Analysis MSc Programme.
Optional for Statistics MSc Programme.

**Learning and teaching methods and delivery:** Weekly contact: 2.5 lectures (weeks 1 - 10) and 8 tutorials over the semester.

**Assessment pattern:** 2-hour Written Examination = 60%, Coursework = 40%

**Module coordinator:** Dr M L MacKenzie

**Module teaching staff:** Dr M L MacKenzie, Dr L Scott-Hayward

## ID5059 Knowledge Discovery and Datamining

<table>
<thead>
<tr>
<th>SCOTCAT Credits:</th>
<th>15</th>
<th>SCQF Level 11</th>
<th>Semester:</th>
<th>2</th>
</tr>
</thead>
</table>

**Planned timetable:** 11.00 am Mon (odd weeks), Wed and Fri

Contemporary data collection can be automated and on a massive scale e.g. credit card transaction databases. Large databases potentially carry a wealth of important information that could inform business strategy, identify criminal activities, characterise network faults etc. These large scale problems may preclude the standard carefully constructed statistical models, necessitating highly automated approaches. This module covers many of the methods found under the banner of "Datamining", building from a theoretical perspective but ultimately teaching practical application. Topics covered include: historical/philosophical perspectives, model selection algorithms and optimality measures, tree methods, bagging and boosting, neural nets, and classification in general. Practical applications build sought-after skills in programming (typically R, SAS or python).

**Programme module type:** Compulsory for Applied Statistics and Datamining Postgraduate Programme.
Compulsory for Data-Intensive Analysis MSc Programme.
Optional for all Postgraduate Programmes.

**Anti-requisite(s):** MT5759

**Learning and teaching methods and delivery:** Weekly contact: Lectures, seminars, tutorials and practical classes.

**Assessment pattern:** 2-hour Written Examination = 60%, Coursework = 40%

**Module coordinator:** masters-coord-cs@st-andrews.ac.uk
### Either:

#### CS5099 Dissertation in Computer Science

<table>

</thead>
<tbody>
<tr>
<td>Planned timetable:</td>
<td>To be arranged.</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

This module is an individually supervised MSc project on a topic in Computer Science. It results in a dissertation of no more than 15,000 words. Typically the dissertation comprises a review of related work, the extension of old or development of new ideas, software implementation and testing, analyses and evaluation. Students are required to give a presentation of their work.

**Programme module type:** Either CS5099 or CS5098 is compulsory for the Advanced Computer Science, Artificial Intelligence, Data-Intensive Analysis, Human Computer Interaction, Computer Communication Systems and Software Engineering MSc

**Pre-requisite(s):** Admission to dissertation phase of MSc and permission of the Head of School

**Anti-requisite(s):** CS5098

**Learning and teaching methods and delivery:** **Weekly contact:** Meeting with supervisor.

**Assessment pattern:** Coursework = 100%

**Module coordinator:** dopgt-cs@st-andrews.ac.uk

### OR

#### MT5099 Dissertation for MSc Programme/s

<td></td>
</tr>
</tbody>
</table>

Student dissertations will be supervised by members of the teaching staff who will advise on the choice of subject and provide guidance throughout the progress of the dissertation. The completed dissertation of not more than 15,000 words must be submitted by the 21st of August.

**Programme module type:** Compulsory for MSc Programmes in Mathematics and in Statistics. Optional for Data-Intensive Analysis MSc Programme.

**Learning and teaching methods and delivery:** **Weekly contact:** Individual supervision

**Assessment pattern:** Dissertation = 100%

**Module coordinator:** Dr J D Mitchell
### Optional modules:

#### CS5001 Object-Oriented Modelling, Design and Programming

<table>
<thead>
<tr>
<th>SCOTCAT Credits:</th>

<td></td>
<td></td>
</tr>
</tbody>
</table>

This module introduces and revises object-oriented modelling, design and implementation up to the level required to complete programming assignments within other MSc modules. Students complete a number of practical exercises in laboratory sessions.

**Programme module type:** Compulsory for Advanced Computer Science, Artificial Intelligence, Computer Communication Systems and Software Engineering Postgraduate Programmes, except when exempted following satisfactory performance in an assessment conducted by the school.

Compulsory for European Masters in Dependable Software Systems Postgraduate Programme

Either CS5001 or CS5002 is compulsory for Human Computer Interaction and Computing and Information Technology Postgraduate Programmes.

Optional for Data-Intensive Analysis, Information Technology and Management and Information Technology Postgraduate Programmes.

**Anti-requisite(s):** CS5002

**Required for:** CS5011, CS5022, CS5031, CS5052

**Learning and teaching methods and delivery:** **Weekly contact:** Lectures, tutorials and practical classes.

**Assessment pattern:** Coursework = 100%

**Module coordinator:** dopgt-cs@st-andrews.ac.uk

#### CS5002 Programming Principles and Practice

<table>

This module introduces computational thinking and problem solving skills to students who have no or little previous programming experience. It covers general programming concepts used in the development of software applications, such as data structures, functions, choice, iteration, recursion and input/output. An easy-to-learn programming language is used to illustrate these concepts, and programming skills are reinforced through practical assignments.

**Programme module type:** Either CS5001 or CS5002 is compulsory for Computing and Information Technology and Human Computer Interaction Postgraduate Programmes.

Optional for Data-Intensive Analysis, Information Technology and Management and Information Technology Postgraduate Programmes.

**Anti-requisite(s):** CS5001

**Required for:** CS5003

**Learning and teaching methods and delivery:** **Weekly contact:** Lectures, tutorials and practical classes.

**Assessment pattern:** Coursework = 100%

**Module coordinator:** dopgt-cs@st-andrews.ac.uk
### CS5003 Masters Programming Projects

<table>
<thead>
<tr>
<th>SCOTCAT Credits:</th>
<th>15</th>
<th>SCQF Level: 11</th>
<th>Semester:</th>
<th>2</th>
</tr>
</thead>
</table>

**Planned timetable:** Variable

This module reinforces key programming skills gained in CS5002, by means of a series of coursework assignments posed as small programming projects. These are designed to offer increasing depth and scope for creativity as the module progresses.

**Programme module type:** Compulsory for Computing and Information Technology Postgraduate Programme.
Optional for Advanced Computer Science, Artificial Intelligence, Computer Communication Systems, Intensive Analysis, Information Technology, Human Computer Interaction MSc Programmes, EngD in Computer Science

**Pre-requisite(s):** CS5002  
**Anti-requisite(s):** ISS108

**Learning and teaching methods and delivery:** Weekly contact: Lectures, tutorials and practical classes.

**Assessment pattern:** Coursework = 100%

**Module coordinator:** dopgt-cs@st-andrews.ac.uk

### CS5044 Information Visualisation and Visual Analytics

<table>
<thead>
<tr>
<th>SCOTCAT Credits:</th>
<th>15</th>
<th>SCQF Level: 11</th>
<th>Semester:</th>
<th>2</th>
</tr>
</thead>
</table>

**Planned timetable:** To be arranged.

This module provides an introduction to information visualisation and visual analytics. It focuses on the question of how to utilise visual representations to make information accessible for exploration and analysis. The module covers basic principles of visualisation design and interaction principles. It introduces a range of visualisation techniques and tools, and discusses how these can be effectively applied in various scenarios for communication, exploration and analysis, and how to evaluate information visualisations in different contexts.

Skills in designing, developing, and evaluating information visualisations are reinforced through practical assignments. There are no pre-requisites for this module but students should have basic programming skills (e.g. in Java or JavaScript).

**Programme module type:** Either CS5041 or CS5044 is compulsory for Human Computer Interaction Postgraduate Programmes
Optional for all Postgraduate Programmes

**Learning and teaching methods and delivery:** Weekly contact: 3-hour lecture (x 11 weeks), 1-hour seminar (x 8 weeks)

**Assessment pattern:** 2-hour Written Examination = 40%, Coursework = 60%

**Module coordinator:** dopgt-cs@st-andrews.ac.uk
### CS5052 Data-Intensive Systems

<table>

The era of big data is upon us - the volume, velocity and variety of enterprise and scientific data are growing at an exponential rate and will continue to do so for the foreseeable future. This module presents the programming paradigms, algorithmic techniques and design principles for large-scale distributed systems, such as those utilised by companies such as Google, Amazon and Facebook. This module is different in scope from CS4103 (distributed systems) as it focuses primarily on building and utilising large-scale clusters. The module will cover: distributed systems architecture, replication and fault tolerance, storage, coordination, scheduling algorithms, cluster computing, cloud computing, virtualisation, programming models (e.g., MapReduce), stream processing, decentralised systems (e.g., Chord), incentive-based systems (e.g., BitTorrent), and social computing (e.g., crowd sourcing techniques). This module will draw from the latest research in both academia and industry.

<table>
