School of Computer Science

Important Degree Information:

B.Sc./M.A. Honours
The general requirements are 480 credits over a period of normally 4 years (and not more than 5 years) or part-time equivalent; the final two years being an approved honours programme of 240 credits, of which 90 credits are at 4000 level and at least a further 120 credits at 3000 and/or 4000 levels. Refer to the appropriate Faculty regulations for lists of subjects recognised as qualifying towards either a B.Sc. or M.A. degree.

B.Sc./M.A. Honours with Integrated Year Abroad
The general requirements are 540 credits over a period of normally 5 years (and not more than 6 years) or part-time equivalent; the final three years being an approved honours programme of 300 credits, of which 60 credits are gained during the integrated year abroad, 90 credits are at 4000 level and at least a further 120 credits at 3000 and/or 4000 levels. Refer to the appropriate Faculty regulations for lists of subjects recognised as qualifying towards either a BSc or MA degree.

Other Information: In the case of students who spend part of the Honours Programme abroad on a recognised Exchange Scheme, the Programme Requirements will be amended to take into account courses taken while abroad.

^ also available as 'with Integrated Year Abroad Degree'
Computer Science – Honours 2005/06 – August 2005

Modules

Normally the prerequisite for each of the following Honours modules is entry to the Honours Programme(s) for which they are specified, as well as any additional specific prerequisite(s) given.

General Degree students wishing to enter 3000 modules and non-graduating students wishing to enter 3000 or 4000 level modules must consult with the relevant Honours Adviser within the School before making their selection.

Computer Science (CS) Modules

CS3051 Software Engineering
Credits: 15.0  Semester: 1
Prerequisites: CS2001 and (CS2002 or CS2003)
Description: This module introduces software engineering through lectures, associated practical work, seminar reports and essays. We define software engineering and consider those attributes of software which distinguish a well-engineered system from a badly-engineered system, concentrating on the differences between large systems and small ones, and introduce some concepts of software design and good programming practice. We will concentrate in particular on object-oriented techniques and Java programming.

Class Hour: To be arranged.
Teaching: Two lectures, fortnightly tutorial, two-and-a-half hour practical.
Assessment: Continuous Assessment = 40%, 2 Hour Examination = 60%

CS3099 Software Team Project
Credits: 15.0  Semester: Whole Year
Availability: Not available to General Degree Students
Prerequisites: CS2001 and (CS2002 or CS2003)
Description: This module aims to allow students to take part in a substantial software engineering project as part of a team, using professional development techniques. Each team will specify, plan, design, implement and document a medium-sized software system under the guidance of a member of staff. Teams are required to cooperate in order to produce successful solutions. Typically, the software system will simulate a real world problem, proposed by the module co-ordinator acting as a customer.

Class Hour: To be arranged.
Teaching: Weekly seminars and practical classes.
Assessment: Continuous Assessment = 100%

CS3101 Databases
Credits: 15.0  Semester: 2
Prerequisites: CS2001 and (CS2002 or CS2003)
Description: This module aims (i) to study data models, indexing techniques and query processing; (ii) to study database systems including concurrency, transactions, distribution and recovery. The syllabus includes: data models; indexing, hashing and query processing; concurrency, transactions and recovery; security and integrity.

Class Hour: To be arranged.
Teaching: Two lectures, fortnightly tutorial, two-and-a-half hour practical.
Assessment: Continuous Assessment = 40%, 2 Hour Examination = 60%
CS3102 Data Communications and Networks
Credits: 15.0 Semester: 1
Prerequisites: CS2001 and (CS2002 or CS2003)
Description: This module aims (i) to introduce the basics of data communications and computer networks, and (ii) to examine network protocols and architectures. The syllabus includes: the concepts of protocols, layered models, resource sharing and standards; transmission media; analog and digital data encoding; reliable communication; error detection and correction; flow control; link-level efficiency and sliding window protocols; medium access control policies and mechanisms; LAN topologies and extended LANS; network topologies, internetworks and network routing; connection-oriented and connectionless networks; transport level protocols; congestion control; QoS for different traffic types; Study of particular networks and protocols such as the traditional telephone network; the Internet; WiFi, FDDI, Ethernet, ISDN, TCP/IP, ATM. Network programming APIs such as sockets.
Class Hour: To be arranged.
Teaching: Two lectures, fortnightly tutorial, two-and-a-half hour practical.
Assessment: Continuous Assessment = 40%, 2 Hour Examination = 60%

CS3103 Graphs and Algorithms
Credits: 15.0 Semester: 1
Prerequisites: CS2001 and (CS2002 or CS2003)
Description: This module introduces selected concepts and results of graph theory, from both a theoretical and an algorithmic viewpoint, with a particular emphasis on applications to computer networks. Other theoretical topics relevant to computer networks, such as queuing theory, may also be covered. Using, where appropriate, graph theoretic problems as examples, the module will also teach a range of algorithm design paradigms, such as "divide and conquer" and "dynamic programming".
Class Hour: To be arranged.
Teaching: Two lectures, fortnightly tutorial, two-and-a-half hour practical.
Assessment: Continuous Assessment = 40%, 2 Hour Examination = 60%

CS3104 Operating Systems
Credits: 15.0 Semester: 2
Prerequisites: CS2001 and (CS2002 or CS2003)
Description: This module aims (i) to examine in depth the changing role of the operating system; (ii) to study the concept and implementation of process; (iii) to study the OS/hardware interface with regard to storage and protection; (iv) to study the techniques developed to achieve safety and throughput in a multitasking system. The syllabus includes: structured computer organisation; process definition and implementation; interprocess communication and synchronisation; review of scheduling; review of file systems; storage management.
Class Hour: To be arranged.
Teaching: Two lectures, fortnightly tutorial, two-and-a-half hour practical.
Assessment: Continuous Assessment = 40%, 2 Hour Examination = 60%

CS3201 Machines and Computation
Credits: 15.0 Semester: 1
Prerequisites: CS2001 and CS2002
Description: This module aims to give an understanding of the foundations of computation including the basic issues in language recognition, with applications in areas such as compiler design, and to introduce general models of computation (Turing machines and others) which illustrate the limits of the power of computers.
Class Hour: To be arranged.
Teaching: Two lectures, fortnightly tutorial, two-and-a-half hour practical.
Assessment: Continuous Assessment = 40%, 2 Hour Examination = 60%
CS3202 Logic, Specification and Verification

Credits: 15.0  Semester: 2
Prerequisites: CS2001 and CS2002
Description: Building on earlier coverage of elementary logic, this module covers the topics of formal proof (including induction), software and hardware specification, validation and verification. A tool such as PVS or Coq will be employed in practical work.
Class Hour: To be arranged.
Teaching: Two lectures, fortnightly tutorial, two-and-a-half hour practical.
Assessment: Continuous Assessment = 40%, 2 Hour Examination = 60%

CS3301 Component Technology

Credits: 15.0  Semester: 1
Prerequisites: CS2001 and CS2003
Description: The module will provide students with a knowledge and understanding of current and emerging component technologies. The module is focused on two major themes: Object-Oriented Middleware (OOM) and Message-Oriented Middleware (MOM). In the first theme we examine the evolution of object-oriented programming into (distributed) component models such as The Common Object Request Broker Architecture (CORBA), The Component Object Model (COM), Java Remote Method Invocation (RMI) and Java Beans. The common underlying requirements of these systems will be studied in detail such as naming and binding issues and marshalling and unmarshalling of data. The second theme will explore the emerging field of Message-Oriented Middleware with an in-depth study into current MOM technologies such as Java Messaging System (JMS).
Class Hour: To be arranged.
Teaching: Two lectures, fortnightly tutorial, two-and-a-half hour practical.
Assessment: Continuous Assessment = 40%, 2 Hour Examination = 60%

CS3302 Data Encoding

Credits: 15.0  Semester: 2
Prerequisites: CS2001 and CS2003
Description: This module aims to explain the techniques used to encode data, emphasising in turn the ideas of: security and secrecy, error correcting capabilities, data compression. The syllabus comprises: the weakness of early encryption schemes, the Data Encryption Standard, public key schemes including RSA; attacks on RSA by integer factorisation; Hamming distance, linear codes, parity check equations; Hamming codes, BCH codes; information and uncertainty, run encoding, Huffman encoding.
Class Hour: To be arranged.
Teaching: Two lectures, fortnightly tutorial, two-and-a-half hour practical.
Assessment: Continuous Assessment = 40%, 2 Hour Examination = 60%

CS4051 Professional and Social Aspects of Computing

Credits: 15.0  Semester: Whole Year
Prerequisite: CS3099
Description: This module aims: (i) to enable students to gain a broad general knowledge of some current research areas in computer science and their application in industry and commerce, and the non-technical factors which may affect decision-making in these areas; (ii) to make students aware of the social implications and ethical problems which may face the users and builders of computer systems; (iii) to develop skills in collecting and communicating information, managing and leading debate and drawing conclusions. It will consist of three parts: (i) a series of seminars will be given and students will be required to write short reports on a certain number of these and take part in a follow-up discussion; (ii) students will be required to write an essay on a current technological, business or social issue in computer science; (iii) students will be required to give an individual or team presentation on a social or professional issue in Computer Science, and lead and manage a follow-up discussion.
Teaching: Individual supervision
Assessment: Continuous Assessment = 100%
CS4098 Minor Software Project
Credits: 15.0  
Prerequisite: CS3099
Anti-requisite: CS4099
Description: This module aims to allow students to undertake a substantial software engineering project using professional development techniques. Each student will design, specify and construct a medium-sized software system or undertake a formal development and proof of such a system under the guidance of a member of staff. The syllabus is designed on an individual basis.
Teaching: Individual supervision
Assessment: Continuous Assessment = 100%

CS4099 Major Software Project
Credits: 30.0  
Prerequisite: CS3099
Anti-requisite: CS4098
Description: This module aims to allow students to undertake a substantial software engineering project using professional development techniques. Each student will design, specify and construct a medium-sized software system or undertake a formal development and proof of such a system under the guidance of a member of staff. The syllabus is designed on an individual basis.
Teaching: Individual supervision
Assessment: Continuous Assessment = 100%

CS4101 Artificial Intelligence
Credits: 15.0  
Prerequisite: CS3099
Description: This module aims to provide understanding of the general features of the A.I. problem solving process, and in particular to explain the various forms of heuristic together with their implementation and case studies of real systems. The syllabus includes aspects of action and planning, learning, reasoning.
Class Hour: To be arranged.
Teaching: Two lectures, fortnightly tutorial, two-and-a-half hour practical.
Assessment: Continuous Assessment = 40%, 2 Hour Examination = 60%

CS4102 Computer Graphics
Credits: 15.0  
Prerequisite: CS3099
Description: The aims of the module are to provide understanding of the fundamental concepts of computer graphics and to develop the ability to apply the concepts to the generation of realistic, synthetic images of 3D objects and scenes. On completion of the module, students should be competent to undertake many tasks in computer graphics, and should have an understanding of the theory underlying many of the relevant techniques. The syllabus includes: 2D graphics: Display technology, perception & colours, basic drawing algorithms, image manipulation; 3D graphics: Coordinate transformation and perspective geometry, hidden surface removal, lighting using local and global illumination models (ray-tracing and radiosity), surface detail (texture and bump mapping), 3D engine overview; Animation: Procedural, spline motion + rotations, articulated models & particle systems, face animation.
Class Hour: To be arranged.
Teaching: Two lectures, fortnightly tutorial, two-and-a-half hour practical.
Assessment: Continuous Assessment = 40%, 2 Hour Examination = 60%
CS4103 Distributed Systems
Credits: 15.0 Semester: 1
Prerequisites: CS3099 and CS3102
Description: This module aims to help students to understand the fundamentals of distributed systems with reference to system models, programming languages, algorithmic techniques, concurrency and correctness. The syllabus covers synchronisation & mutex problems, atomic transactions, topologies, CSP, Internet programming and distributed computing, distributed mutex and logical time & causality.
Class Hour: To be arranged.
Teaching: Two lectures, fortnightly tutorial, two-and-a-half hour practical.
Assessment: Continuous Assessment = 40%, 2 Hour Examination = 60%

CS4104 Human Computer Interaction
Credits: 15.0 Semester: 2
Prerequisites: CS3099 and CS3051
Description: This module covers the main aspects of Human Computer interaction. Design guidelines, structured design methods and standards are studied and practice is given in implementation and evaluation. Students will have experience of current interactive audio, visual and manipulative technologies.
Class Hour: To be arranged.
Teaching: Two lectures, fortnightly tutorial, two-and-a-half hour practical.
Assessment: Continuous Assessment = 40%, 2 Hour Examination = 60%

CS4201 Programming Language Design and Implementation
Credits: 15.0 Semester: 2
Prerequisites: CS3099 and CS2002
Description: This module aims to study the design and implementation of programming languages. The syllabus includes: language design principles, abstract syntax, evaluation mechanisms, binding, type systems, polymorphism, data encapsulation, exceptions, formal definition of programming languages, compiling techniques, abstract machine design, run-time systems and garbage collection.
Class Hour: To be arranged.
Teaching: Two lectures, fortnightly tutorial, two-and-a-half hour practical.
Assessment: Continuous Assessment = 40%, 2 Hour Examination = 60%

CS4202 Computer Architecture
Credits: 15.0 Semester: 1
Prerequisites: CS3099, CS3104 and CS2002
Description: This module aims to study the principles and technology of modern computer architectures, with particular emphasis on performance and acceleration. The syllabus consists of: (i) the CPU: pipelined, superscalar, multiprocessor and supercomputer architectures, coprocessors and ASICs, microprogramming; (ii) memory: instruction and data caches; (iii) interconnect architectures: topologies, buses; (iv) performance concepts: latency, bandwidth and analysis; (v) programming models: RISC, CISC, virtual addressing, high-level language support, multiprogramming and multiprocessor consistency; (vi) case studies.
Class Hour: To be arranged.
Teaching: Two lectures, fortnightly tutorial, two-and-a-half hour practical.
Assessment: Continuous Assessment = 40%, 2 Hour Examination = 60%
CS4203 Computer Security
Credits: 15.0 Semester: 2
Prerequisites: CS3099 and (CS2002 or CS3302)
Description: This module aims to introduce the basic concepts of computer security and cryptography, including common attacks and defences against them, and the legal and policy framework. The syllabus includes: What is security, security applications and policy models. Introduction to access control, typical vulnerabilities. Unix and Internet security, firewalls, intrusion detection, malicious code and countermeasures. Information hiding, Stream ciphers, Block ciphers, Symmetric cryptographic protocols, Asymmetric cryptosystems, Asymmetric cryptographic protocols, Digital signatures, Public key infrastructures, Certification authorities. Security engineering, risk models, robustness, legal and organisational aspects of computer security. Data Protection Act, the Computer Misuse Act, international aspects, export control and key escrow.
Class Hour: To be arranged.
Teaching: Two lectures, fortnightly tutorial, two-and-a-half hour practical.
Assessment: Continuous Assessment = 40%, 2 Hour Examination = 60%

CS4301 Agent Systems and Information Retrieval
Credits: 15.0 Semester: 1
Prerequisites: CS3099 and CS3301
Description: This module looks at some of the fundamental ideas underlying the use of software agents, in particular for information retrieval. Topics covered include: Definition of agents; Successful applications and state-of-the-art agent-based systems; Agent architectures: simple reactive agents, reactive planners, layered architectures, example architectures and applications; Agent theory: beliefs, commitments, desires, intentions, decision-theoretic agents, Markov decision processes; Software agents, personal assistants and information access: collaborative agents, information-gathering agents, believable agents (synthetic characters, modeling emotions in agents); Learning agents; Multi-agent systems: collaborating agents, agent teams, agent modeling, multi-agent learning; Robotic agents; Mobile agents. A tool such as AgentBuilder or Grasshopper will be used for practical work.
Class Hour: To be arranged.
Teaching: Two lectures, fortnightly tutorial, two-and-a-half hour practical.
Assessment: Continuous Assessment = 40%, 2 Hour Examination = 60%

CS4302 Multimedia
Credits: 15.0 Semester: 1
Prerequisites: CS3099 and CS3102
Description: The module will introduce students to the concepts of analogue and digital media and review current standards and technologies used in the production, transport and rendering of digital multimedia. Within the context of networked multimedia the concept of Quality-of-Service will be introduced and the issues involved in transporting time-sensitive data across computer networks will be explained. Specific examples drawn from Internet-based projects, protocols and standards will be used to illustrate these issues.
Class Hour: To be arranged.
Teaching: Two lectures, fortnightly tutorial, two-and-a-half hour practical.
Assessment: Continuous Assessment = 40%, 2 Hour Examination = 60%

CS4402 Constraint Programming
Credits: 15.0 Semester: 2
Prerequisites: CS3099
Description: This module introduces constraint-based reasoning as a powerful mechanism for knowledge representation and inference. It provides a thorough grounding in the constraint satisfaction/constrained optimization problem (CSP/COP) formalism, and covers both basic techniques for implementing constraint solvers and the use of advanced techniques with a commercial solver.
Class Hour: To be arranged.
Teaching: Two lectures, and fortnightly tutorial
Assessment: Continuous Assessment = 40%, 2 Hour Examination = 60%
CS4499 Computer Science (Special Subject)
Credits: 15.0  Semester: Either
Prerequisites: Entry to the SingleHonours Computer Science or Internet Computing Degree programme and the consent of the Head of School
Anti-requisite: CS3045
Description: This module is a guided reading module on any aspect of Computer Science not covered by other available modules, intended only for Single Honours students in the Computer Science or Internet Computing Honours programme for whom exceptional timetable arrangements (such as a semester or year of absence) restrict the availability of modules unduly.
Class Hour: To be arranged.
Teaching: Tutorials, guided reading, essays, presentations and supervised practicals.
Assessment: Continuous Assessment = 100%

Information Technology (IS) Modules
IS3001 Third Level Information Technology
Credits: 60.0  Semester: 1
Prerequisites: 90 credits in Second level modules in any of the subjects listed in Arts Regulation 2(i)-(vii)
Anti-requisites: IS1001 (formerly CS1001), unless an extra 10 credits are passed or further IT work is undertaken at the discretion of the Head of School; IS1003 (formerly CS1003), IS2001
Description: This module is an intensive practically oriented introduction to information technology, covering systems and networks basics, word processing, spreadsheets, databases, graphics, electronic publishing, the Internet, information retrieval, web site authoring, multimedia, legal and ethical aspects of computing and applications of IT in the arts and social sciences in general.
Class Hour: Full time, Mondays to Fridays
Teaching: lectures, tutorials, seminars and practicals
Assessment: Continuous Assessment = 100%
Re-assessment: Practical and/or oral examination

IS3002 Third Level Information Technology Project
Credits: 60.0  Semester: 2, save with Head of School’s permission
Prerequisite: IS3001
Description: A work-placement module, for a ‘remote supervisor’ in the University or in a local enterprise, on an IT topic of likely benefit to the remote supervisor. The topic must be approved by the Head of the School of Computer Science.
Class Hour: Full time, Mondays to Fridays
Teaching: Supervision, technical guidance and day-to-day support provided by the School of Computer Science; lectures on elementary software engineering, some supervision provided by the remote supervisor
Assessment: Project Report = 100%
Re-assessment: Practical and/or oral examination
