School of Mathematics & Statistics

Important Degree Information:

B.Sc./M.A. Honours
The general requirements are 480 credits over a period of normally 4 years (and not more than 5 years) or part-time equivalent; the final two years being an approved honours programme of 240 credits, of which 90 credits are at 4000 level and at least a further 120 credits at 3000 and/or 4000 (H) levels. Refer to the appropriate Faculty regulations for lists of subjects recognised as qualifying towards either a B.Sc. or M.A. degree.

B.Sc./M.A. Honours with Integrated Year Abroad
The general requirements are 540 credits over a period of normally 5 years (and not more than 6 years) or part-time equivalent; the final three years being an approved honours programme of 300 credits, of which 60 credits are gained during the integrated year abroad, 90 credits are at 4000 level and at least a further 120 credits at 3000 and/or 4000 (H) levels. Refer to the appropriate Faculty regulations for lists of subjects recognised as qualifying towards either a B.Sc. or M.A. degree.

M.Math. Honours
General requirements are 600 credits over a period of normally 5 years or 4 years with Advanced Standing (and in no circumstances more than 6 years) or part-time equivalent; an approved honours programme of at least 330 credits of which 120 credits are at 5000 level and at least a further 210 are at 3000 level and above.

Other Information: In the case of students who spend part of the BSc/MA Honours Programme abroad on a recognised Exchange Scheme, the Programme Requirements will be amended to take into account courses taken while abroad.

</table>
Students completing any other degree programmes (as defined in previous Course Catalogues) should discuss their module selections with one of the School’s Honours Advisers.

Modules

Normally the prerequisite for each of the following Honours modules is entry to the Honours Programme(s) for which they are specified, as well as any additional specific prerequisite(s) given.

General degree students wishing to enter 3000 modules and non-graduating students wishing to enter 3000 or 4000 level modules must consult with the relevant Honours Adviser within the School before making their selection.

The prerequisite for each of the following 5000 modules is entry to the MPhys or MMath Programme(s) for which they are specified, as well as any additional specific prerequisite(s) given.

MT3501 Linear Mathematics
Credits: 15.0 Semester: 1
Prerequisite: MT2001 or MT2101
Description: This module aims to show the importance of linearity in many areas of mathematics ranging from linear algebra through to geometric applications to linear operators and special functions. The main topics covered are: linear dependence and independence; change of basis; inner product spaces; inequalities; convergence in Euclidean spaces; Fourier series and adjoint and self-adjoint operators.
Class Hour: 12.00 noon
Teaching: Two lectures and one tutorial.
Assessment: Continuous Assessment = 10%, 2 Hour Examination = 90%

MT3503 Complex Analysis
Credits: 15.0 Semester: 1
Prerequisite: MT2001 or MT2101
Description: This module aims to introduce students to analytic function theory and applications. The topics covered include: analytic functions; Cauchy-Riemann equations; harmonic functions; multivalued functions and the cut plane; singularities; Cauchy’s theorem; Laurent series; evaluation of contour integrals; fundamental theorem of algebra; Argument Principle; Rouche’s Theorem.
Class Hour: 12.00 noon
Teaching: Two lectures and one tutorial.
Assessment: Continuous Assessment = 10%, 2 Hour Examination = 90%

MT3504 Differential Equations
Credits: 15.0 Semester: 1
Prerequisite: MT2001 or MT2101
Description: The object of this module is to provide a broad introduction to analytical methods for solving ordinary and partial differential equations and to develop students’ understanding and technical skills in this area. This module is a prerequisite for several other honours options. The syllabus includes: existence and uniqueness of solutions to initial-value problems; series solutions of second-order o.d.e.’s; examples including Bessel, Legendre and Airy equations; nonlinear o.d.e.’s; classification of second order linear p.d.e.’s; method of separation of variables; eigenvalues for boundary conditions of mixed type; characteristics and reduction to canonical form.
Class Hour: 9.00 am
Teaching: Two lectures and one tutorial.
Assessment: Continuous Assessment = 10%, 2 Hour Examination = 90%
MT3600 Fundamentals of Pure Mathematics
Credits: 15.0  Semester: 1
Prerequisite: MT2002 or (MT2001 and MT1003)
Description: The aim of this module is to introduce the fundamental algebraic and analytic concepts in pure mathematics in the context of the number systems.
Class Hour: 10.00 am
Teaching: Two lectures and one tutorial.
Assessment: 2 Hour Examination = 100%

MT3601 Fundamentals of Applied Mathematics
Credits: 15.0  Semester: 1
Prerequisites: (MT2001 and MT2003) or MT2101
Anti-requisite: MT4601
Description: This module is designed to introduce students to the mathematical methods which are needed to go on to further study of fluid mechanics, magnetohydrodynamics and electromagnetism. It consists of a revision of the techniques of vector calculus, followed by a discussion of the basic equations of fluid dynamics and electromagnetism. The properties of these equations are then illustrated by considering some basic properties of fluid flow and of magnetohydrodynamics.
Class Hour: 10.00 am
Teaching: Two lectures and one tutorial.
Assessment: 2 Hour Examination = 100%

MT3606 Statistical Methods
Credits: 15.0  Semester: 1
Prerequisite: MT2004
Description: This module provides a bridge between second year and Honours modules in statistics. Topics covered include nonparametric methods, analysis of Poisson data, distribution theory, introduction to Bayesian methods, likelihood-based methods. The module covers some of the basic tools used by statisticians to develop a wide range of statistical methods.
Class Hour: 9.00 am
Teaching: Two lectures and one tutorial.
Assessment: 2 Hour Examination = 100%

MT3607 Computing in Statistics
Credits: 15.0  Semester: 2
Availability: 2007-08
Prerequisites: MT2004 or both MT1008 and MT2001
Description: Students will gain experience with the software package SAS and the statistical language and environment R. Statistical computing exercises include using and writing software to (1) extract and organize electronically stored data, (2) search for patterns and meaningful relationships, (3) fit mathematical models to characterize relationships succinctly, (4) produce useful graphical and numerical summaries.
Class Hour: 9.00 am
Teaching: Two lectures and one practical class.
Assessment: Continuous Assessment = 30%, 2 Hour Examination = 70%
MT3703 Stochastic Modelling
Credits: 15.0  Semester: 1
Availability: 2007-08
Prerequisite: MT2004
Description: The object of this module is to introduce students to the basic ideas of stochastic models of systems, to enable them to formulate and analyse stochastic models (in terms of Markov chains or appropriate continuous-time stochastic processes) for various systems, and to explain how simulation may be of use in understanding such models. The syllabus includes: Markov chains; Chapman-Kolmogorov equations; basic properties of random walks; queues; idea of a Poisson process in terms both of events and inter-event times; the concept of simulation of stochastic processes; how to formulate an appropriate stochastic model of a system.
Class Hour: 11.00 am
Teaching: Two lectures and one tutorial.
Assessment: 2 Hour Examination = 100%

MT3802 Numerical Analysis
Credits: 15.0  Semester: 1
Prerequisites: MT2001 or MT2101
Anti-requisite: MT4502
Description: The module will introduce students to some topics in numerical analysis, which may include methods of approximation, numerical integration, solution of systems of linear equations by elimination and by iterative methods.
Class Hours: 11.00 am
Teaching: Two lectures and one tutorial.
Assessment: Continuous Assessment = 20%, 2 Hour Examination = 80%

MT3832 Mathematical Programming
Credits: 15.0  Semester: 2
Availability: 2007-08
Prerequisites: MT2001 (or MT1002 and MN2002)
Anti-requisite: MT4532
Description: The aim of this module is to introduce students to the formulation and solution of various linear programming problems. The subject matter will be illustrated by applying the methods of solution to real examples. The syllabus includes: formulation of linear problems; solution graphically and by simplex algorithm; sensitivity analysis; duality; transportation and transshipment; the assignment problem.
Class Hour: 12.00 noon
Teaching: Two lectures and one tutorial.
Assessment: 2 Hour Examination = 100%

MT3833 Utilities, Decisions and Inventories
Credits: 15.0  Semester: 2
Availability: 2008-09
Prerequisite: MT2004
Anti-requisite: MT4533
Description: This module is intended to provide an introduction to the formulation and solution of problems of decision-taking and problems in the management of inventory systems for a single item, to motivate the need for utility functions, and to explain how they are assessed and employed. The syllabus includes: decision theory; maximin and Bayesian approaches; Bayes theorem; Bellman’s optimality principle; utility theory; utility functions; inventory theory.
Class Hour: 12.00 noon
Teaching: Two lectures and one tutorial.
Assessment: 2 Hour Examination = 100%
### MT4003 Groups

**Credits:** 15.0  
**Semester:** 2  
**Prerequisite:** MT3600 or (MT2002 and MT3501)  
**Anti-requisites:** MT3603, MT4603  
**Description:** This module introduces students to group theory, which is one of the central fields of the 20th century mathematics. The main theme of the module is classifying groups with various additional properties, and the development of tools necessary in this classification. In particular, the students will meet the standard algebraic notions, such as substructures, homomorphisms, quotients and products, and also various concepts peculiar to groups, such as normality, conjugation and Sylow theory. The importance of groups in mathematics, arising from the fact that groups may be used to describe symmetries of any mathematical object, will be emphasised throughout the module.  
**Class Hour:** 9.00 am  
**Teaching:** Two lectures and one tutorial.  
**Assessment:** 2 Hour Examination = 100%

### MT4004 Real and Abstract Analysis

**Credits:** 15.0  
**Semester:** 2  
**Prerequisite:** MT2002 or with the approval of the module coordinator  
**Anti-requisites:** MT3604, MT4604  
**Description:** This module continues the development of real analysis started in MT2002. Topics that will be treated from a rigorous point of view may include: differentiation, Riemann integration, uniform convergence, function spaces.  
**Class Hour:** 11.00 am  
**Teaching:** Two lectures and one tutorial.  
**Assessment:** 2 Hour Examination = 100%

### MT4005 Linear and Nonlinear Waves

**Credits:** 15.0  
**Semester:** 1  
**Prerequisites:** MT2003 and (MT3503 or MT3504)  
**Anti-requisites:** MT3605, MT4605  
**Description:** This module gives an introduction to wave motion and its importance in many areas of applied mathematics. It begins with a discussion of the linear approximation for small amplitude waves and discusses properties of these such as dispersion relations, phase and group velocities, dissipation and dispersion. Some nonlinear effects such as wave steepening are then treated and an introduction given to some of the equations, for example Burger’s and Korteweg de Vries, which are used to model nonlinear wave propagation.  
**Class Hour:** 11.00 am  
**Teaching:** Two lectures and one tutorial.  
**Assessment:** 2 Hour Examination = 100%
MT4111 Symbolic Computation
Credits: 15.0 Semester: 2
Availability: 2008-09
Prerequisite: MT3501 or MT3503 or MT3504
Anti-requisite: MT3611, MT5611
Description: This module aims to enable students to use Maple as a tool in their other modules and to turn naturally to such a package when solving mathematical problems. The module aims to illustrate the following points: a symbolic computation package allows one to conduct mathematical experiments; a symbolic computation package allows one to collect data about a problem being studied. This is similar to the way other scientists work. It is easier to try several different approaches to a problem and see which works. The machine is stupid. Intelligence comes from the user. The user thinks, the user interprets, the computer calculates.
Class Hour: 9.00 am
Teaching: Two lectures and one tutorial.
Assessment: Continuous Assessment = 30%, 2 Hour Examination = 70%

MT4112 Computing in Mathematics
Credits: 15.0 Semester: 2
Availability: 2007-08
Prerequisites: MT3503 or MT3504
Anti-requisites: MT3612, MT5612, Honours or Joint Honours Programme in Computer Science.
Description: This module is intended to introduce students to FORTRAN and the writing of computer codes to implement mathematical algorithms. The module includes a basic introduction to FORTRAN, and the implementation of mathematical algorithms in a well-documented FORTRAN program. Students are required to complete a project in addition to sitting the examination.
Class Hour: 9.00 am
Teaching: Two lectures and one tutorial.
Assessment: Project = 30%, 2 Hour Examination = 70%

MT4501 Topics in the History of Mathematics
Credits: 15.0 Semester: 1
Prerequisite: one of MT3501, MT3503, MT3504, MT3606
Anti-requisite: MT3801, MT5613
Description: The aim of this module is to give students an insight into the historical development of mathematics. Topics to be covered may include some of: the development of algebra, the origins of the calculus, the history of logarithms, the work of some individual mathematicians.
Class Hour: 12.00 noon
Teaching: Two lectures and one tutorial.
Assessment: Continuous Assessment: Project = 34%, Two Class Tests = 66%

MT4507 Classical Mechanics
Credits: 15.0 Semester: 2
Availability: 2008-09
Prerequisite: MT2003 and (MT3503 or MT3504)
Anti-requisite: MT3807
Description: The object of this module is to introduce students to some of the ideas and mathematical techniques used in understanding the behaviour of dynamical systems that obey Newton’s Laws. These notions are arguably the foundations of physics and applied mathematics. The module will include: Newton’s laws of motion; conservative forces; central forces; non-inertial/accelerating frames of reference; dynamics of a system of particles; mechanics of a rigid body; Euler’s equations; Lagrange’s equations; Hamilton’s equations.
Class Hour: 10.00 am
Teaching: Two lectures and one tutorial.
Assessment: 2 Hour Examination = 100%
MT4508 Dynamical Systems
Credits: 15.0  Semester: 2
Availability: 2007-08
Prerequisite: MT3504
Anti-requisite: MT3808
Description: This module aims to introduce students to the basic ideas of the modern theory of dynamical systems and to the concepts of chaos and strange attractors. The module will include: period doubling; intermittency and chaos; geometrical approach to differential equations; homoclinic and heteroclinic orbits; Poincaré sections; the Smale horseshoe mapping; centre manifold theory.
Class Hour: 10.00 am
Teaching: Two lectures and one tutorial.
Assessment: 2 Hour Examination = 100%

MT4509 Fluid Dynamics
Credits: 15.0  Semester: 2
Prerequisite: MT3601 (or MT4601)
Description: This module provides an introduction to the theory of incompressible fluid dynamics, which describes the motion of liquids and gases at speeds small compared to the sound speed. Special attention is paid to a precise foundation of the various conservation laws that govern fluid dynamics, as this provides a convenient framework in which to study specific examples as well as extensions of the basic theory.
Class Hour: 11.00 am
Teaching: Two lectures and one tutorial.
Assessment: 2 Hour Examination = 100%

MT4510 Solar Theory
Credits: 15.0  Semester: 2
Prerequisite: MT3601
Anti-requisites: MT4504, MT5804
Description: The object of this module is to describe the basic dynamic processes at work in the Sun, a subject which is being enlivened by dramatic new results from space missions.
Class Hour: 11.00 am
Teaching: Two lectures and one tutorial.
Assessment: 2 Hour Examination = 100%

MT4511 Asymptotic Methods
Credits: 15.0  Semester: 1
Availability: 2008-09
Prerequisite: MT3504
Anti-requisite: MT3811
Description: This module is designed to introduce students to asymptotic methods used in the construction of analytical approximations to integrals and solutions of differential equations.
Class Hour: 9.00 am
Teaching: Two lectures and one tutorial.
Assessment: 2 Hour Examination = 100%
MT4513 Fractal Geometry
Credits: 15.0        Semester: 2
Availability: 2007-08
Prerequisite: MT3501 or MT3503 or MT3504
Anti-requisite: MT3813, MT5813
Description: The aim of this module is to introduce the mathematics used to describe and analyse fractals and to show how the theory may be applied to examples drawn from across mathematics and science. The module discusses the philosophy and scope of fractal geometry; and may include topics such as dimension, representation of fractals by iterated function systems, fractals in other areas of mathematics such as dynamical systems and number theory, Julia sets and the Mandelbrot set.
Class Hour: 12.00 noon
Teaching: Two lectures and one tutorial.
Assessment: 2 Hour Examination = 100%

MT4514 Graph Theory
Credits: 15.0        Semester: 2
Availability: 2008-09
Prerequisite: MT3501 or MT3503 or MT3504
Anti-requisite: MT3814
Description: The aim of this module is to introduce students to the study of Graph Theory as a tool for representing connections between data. Topics to be covered may include: basic theory and applications, Eulerian graphs, Hamiltonian graphs, planar graphs, spanning trees and applications, networks, matching problems.
Class Hour: 10.00 am
Teaching: Two lectures and one tutorial.
Assessment: 2 Hour Examination = 100%

MT4515 Functional Analysis
Credits: 15.0        Semester: 2
Availability: 2008-09
Prerequisite: MT2002 or with the approval of the module coordinator
Anti-requisite: MT3815
Description: This object of this module is to familiarise students with the basic notions of functional analysis, that is analysis on normed spaces and Hilbert space. The module will cover normed spaces, convergence and completeness, operators, Hilbert spaces and may include topics such as spectral theory and the Hahn-Banach theorem.
Class Hour: 12.00 noon
Teaching: Two lectures and one tutorial.
Assessment: 2 Hour Examination = 100%

MT4516 Finite Mathematics
Credits: 15.0        Semester: 1
Availability: 2007-08
Prerequisites: one of MT3501, MT3503, MT3504, MT3606
Anti-requisite: MT3816
Description: The aim of this module is to introduce students to some topics in the mathematics of combinatorial structures. This theory has wide applications, both in classical mathematics and in theoretical computer science. Topics to be covered may include: coding theory, finite geometries, Latin squares, designs.
Class Hour: 9.00 am
Teaching: Two lectures and one tutorial.
Assessment: 2 Hour Examination = 100%
MT4517 Rings and Fields
Credits: 15.0 Semester: 1
Availability: 2008-09
Prerequisite: MT3600 or (MT2002 and MT3501)
Anti-requisite: MT3817
Description: Historically, rings have appeared as generalisations of number systems (integers, in particular) with the intention of gaining deeper insight into number systems themselves. This will be reflected in this module, where students will study familiar concepts, such as factorisation, primeness, divisibility etc., in a new, more general, setting of commutative rings. In addition, the module may include topics from: rings of quotients, finite fields and extensions of fields.
Class Hour: 11.00 am
Teaching: Two lectures and one tutorial.
Assessment: 2 Hour Examination = 100%

MT4519 Number Theory
Credits: 15.0 Semester: 2
Availability: 2007-08
Prerequisite: one of MT3501, MT3503, MT3504
Anti-requisite: MT3819
Description: The aim of this module is to introduce students to some important topics in number theory. Topics to be covered may include: prime numbers, cryptography, continued fractions, Pell’s equation, the Gaussian integers and writing numbers as sums of squares.
Class Hour: 10.00 am
Teaching: Two lectures and one tutorial.
Assessment: 2 Hour Examination = 100%

MT4521 Geometry and Topology
Credits: 15.0 Semester: 2
Availability: 2007-08
Prerequisite: MT2002, (MT3600 or MT3501 or MT4003)
Description: The aim of this module is to elucidate the ancient subject of geometry with the modern algebraic insights of group theory and vector spaces, and show how the more recent subject of topology can be fitted into this framework.
Class Hour: 12.00 noon
Teaching: Two lectures and one tutorial.
Assessment: 2 Hour Examination = 100%

MT4527 Forecasting
Credits: 15.0 Semester: 1
Availability: 2008-09
Prerequisites: MT2004 and one of MT3501, MT3503, MT3504, MT3606
Anti-requisite: MT3827
Description: This module provides an introduction to the forecasting of time series using both 'classical' moving average and exponential smoothing techniques and the Box-Jenkins approach. The syllabus includes: forecasting using moving average and exponential smoothing methods for constant mean and trend models, Holt-Winters method for seasonal models, the ARIMA class of models, fitting and forecasting for Box-Jenkins models.
Class Hour: 11.00 am
Teaching: Two lectures and one tutorial.
Assessment: 2 Hour Examination = 100%
MT4530 Population Genetics
Credits: 15.0 Semester: 1
Availability: 2007-08
Prerequisites: MT2004 and one of MT3501, MT3503, MT3504, MT3606
Anti-requisite: MT3830
Description: This module aims to show how the frequencies of characteristics in large natural populations can be explained using mathematical models and how statistical techniques may be used to investigate model validity. The syllabus includes: Mendel's First and Second Laws, random mating and random union of gametes, Hardy-Weinberg equilibrium, linkage, inbreeding, assortative mating, X-linked loci, selection and mutation.
Class Hour: 11.00 am
Teaching: Two lectures and one tutorial.
Assessment: 2 Hour Examination = 100%

MT4531 Bayesian Inference
Credits: 15.0 Semester: 2
Availability: 2008-09
Prerequisite: MT3606
Anti-requisite: MT3831, MT5831
Description: This module is intended to offer a re-examination of standard statistical problems from a Bayesian viewpoint and an introduction to recently developed computational Bayes methods. The syllabus includes Bayes’ theorem, inference for Normal samples; univariate Normal linear regression; principles of Bayesian computational, Markov chain Monte Carlo – theory and applications.
Class Hour: 10.00 am
Teaching: Two lectures and one tutorial and practical classes.
Assessment: Continuous Assessment = 20%, 2 Hour Examination = 80%

MT4536 Stochastic and Spatial Processes
Credits: 15.0 Semester: 2
Availability: 2007-08
Prerequisite: MT3703
Description: This module develops further the theory of Markov chains which was introduced in MT3703, looking at absorption problems for finite reducible chains. An introduction is given to branching processes, which were first developed to explain the survival or extinction of surnames, considering in particular the criticality theorem of the Galton-Watson process. Birth-and-death population models are used to introduce Markov processes in continuous time. Probabilistic and inferential problems for spatial processes are also studied, looking at models in geostatistics, spatial models for lattice data and at spatial point patterns.
Class Hour: 11.00 am
Teaching: Weekly practical class and five lectures and one tutorial per fortnight.
Assessment: 2 Hour Examination = 100%

MT4551 Financial Mathematics
Credits: 15.0 Semester: 2
Prerequisites: MT2001 and (MT3503 or MT3504)
Anti-requisite: MT3851
Description: Students are introduced to the application of mathematical models to financial instruments. The course will include an overview of financial markets and the terminology in common usage but the emphasis will be on the mathematical description of risk and return as a means of pricing contracts and options.
Class Hour: 10.00 am
Teaching: 2 lectures and one tutorial.
Assessment: 2 Hour Examination = 100%
MT4599 Project in Mathematics/Statistics  
Credits: 15.0  Semester: Whole Year  
Anti-requisite: MT3999  
Description: The student will choose a project from a list published annually although a topic outwith the list may be approved. Students will be required to report regularly to their supervisor and a report of no more than 5,000 words must be submitted by the end of the April.  
Assessment: Project = 100%  

MT4606 Statistical Inference  
Credits: 15.0  Semester: 2  
Availability: 2007-08  
Prerequisites: MT3606  
Anti-requisite: MT3701, MT5701  
Description: This module aims to show how the methods of estimation and hypothesis testing met in MT2004 and MT3606 can be justified and derived; to extend those methods to a wider variety of situations. The syllabus includes: comparison of point estimators; the Rao-Blackwell Theorem; distribution theory; Fisher information and the Cramér-Rao lower bound; maximum likelihood estimation; hypothesis-testing; confidence sets.  
Class Hour: 10.00 am  
Teaching: Two lectures and one tutorial.  
Assessment: 2 Hour Examination = 100%  

MT4607 Generalized Linear Models and Data Analysis  
Credits: 15.0  Semester: 1  
Availability: 2008-09  
Prerequisite: MT2004  
Co-(or pre-)requisite: MT3501  
Anti-requisite: MT5753  
Description: This module aims to demonstrate the power and elegance of unifying a large number of simple statistical models within the general framework of the generalized linear model. It will train students in the interpretation, analysis and reporting of data, when a single response measurement is interpreted in terms of one or a number of other variables.  
Class Hour: 11.00 am  
Teaching: Two lectures and one tutorial and practical classes.  
Assessment: Project = 20%, 2 Hour Examination = 80%  

MT4608 Sampling Theory  
Credits: 15.0  Semester: 1  
Availability: 2008-09  
Prerequisite: MT2004  
Co-(or pre-)requisite: one of MT3501, MT3503, MT3504, MT3606  
Anti-requisite: MT3704  
Description: The aims of this module are to introduce students to and interest them in the principles and methods of design-based inference, to convince them of the relevance and utility of the methods in a wide variety of real-world problems, and to give them experience in applying the principles and methods themselves. By the end of the module students should be able to recognise good and poor survey design and analysis, to decide upon and implement the main types of survey design in relatively straightforward settings, and analyse the resulting survey data appropriately. The syllabus includes fundamentals of design based vs model-based inference, simple random sampling, sampling with replacement, ratio and regression estimators, stratified sampling, cluster sampling and unequal probability sampling.  
Class Hour: 10.00 am  
Teaching: Two lectures, one tutorial and practical classes.  
Assessment: Project = 15%, 2 Hour Examination = 85%
MT4609 Multivariate Analysis  
Credits: 15.0  
Semester: 2  
Availability: 2008-09  
Prerequisite: MT3606  
Anti-requisite: MT3705, MT5705  
Description: This module aims to introduce students to the ideas and techniques of multivariate statistical analysis. The syllabus includes mean vectors, covariance matrices, correlation matrices; basic properties of multivariate normal distributions; checking multivariate normality; the likelihood ratio and union-intersection principles for constructing multivariate tests; the one-sample and two-sample Hotelling’s T-squared tests; tests on covariance matrices, tests of independence; linear discriminant analysis; principal components analysis; canonical correlation.  
Class Hour: 11.00 am  
Teaching: Two lectures, one tutorial and practical classes.  
Assessment: 2 Hour Examination = 100%  

MT5611 Advanced Symbolic Computation  
Credits: 20.0  
Semester: 2  
Availability: 2008-09  
Prerequisite: at least one MT4000 level module  
Anti-requisite: MT4111  
Description: This module aims to enable students to use Maple as a tool in their other modules and to turn naturally to such a package when solving mathematical problems. The module aims to illustrate the following points: a symbolic computation package allows one to conduct mathematical experiments; a symbolic computation package allows one to collect data about a problem being studied. This is similar to the way other scientists work. It is easier to try several different approaches to a problem and see which works. The machine is stupid. Intelligence comes from the user. The user thinks, the user interprets, the computer calculates. Students will undertake a more substantial project than that required for MT4111.  
Class Hour: 9.00 am  
Teaching: Two lectures, one tutorial  
Assessment: Project = 45%, 2 Hour Examination = 55%  

MT5612 Advanced Computing in Mathematics  
Credits: 20.0  
Semester: 2  
Availability: 2007-08  
Prerequisite: at least one MT4000 level module  
Anti-requisite: MT4112  
Description: This module consists of MT4112 with the addition of directed study on more advanced topics not covered in MT4112, for example, the use of NAG libraries and graphics packages plus aspects of Fortran 90 like dynamic allocatable arrays. In addition, the computing project will be more demanding than the project for MT4112. The syllabus includes: an introduction to good programming style through examples; the construction of a well documented Fortran program that implements a numerical algorithm; use of the advanced features of Fortran to, for example, (i) manipulate matrices, (ii) read and write to data files, (iii) implement library routines and (iv) use graphics packages. The students will also complete an advanced project that contributes up to 35% of the final marks for the module.  
Class Hour: 9.00 am  
Teaching: Two lectures and one tutorial.  
Assessment: Project = 35%, 2 Hour Examination = 65%
MT5613 Advanced Topics in the History of Mathematics
Credits: 20.0 Semester: 1
Prerequisites: one of MT4003, MT4004, MT4005 (or MT4603 – MT4605)
Anti-requisite: MT4501
Description: The overall aim of the module is to give students an insight into the historical development of mathematics and an opportunity to research into one particular topic in some depth. This module is taught in parallel with MT4501.
Class Hour: 12.00 noon
Teaching: Two lectures and one tutorial.
Assessment: Continuous Assessment: Project = 50%, Two Class Tests = 50%

MT5701 Advanced Statistical Inference
Credits: 20.0 Semester: 2
Availability: 2007-08
Prerequisites: MT3606 and any MT4000 level module
Anti-requisite: MT4606
Description: This module consists of MT4606 with the addition of directed reading on more advanced aspects of the subject and a requirement to write a review essay on an aspect of the subject. The syllabus includes: comparison of point estimators; the Rao-Blackwell Theorem; distribution theory; Fisher information and the Cramér-Rao lower bound; maximum likelihood estimation; hypothesis-testing; confidence sets.
Class Hour: 10.00 am
Teaching: Two lectures and one tutorial.
Assessment: Project = 25%, 2 Hour Examination = 75%

MT5751 Estimating Animal Abundance
Credits: 10.0 Semester: 2 (2 weeks)
Prerequisites: MT3606 and any MT4000 level module
Anti-requisite: MT4535, MT5835
Description: The module will introduce students to the main types of survey method for wildlife populations. It will cover simple methods in some detail and provide students with a conceptual framework for building understanding of more advanced methods. By the end of the course, students will be able to identify an appropriate assessment method for a given population, be able to design a simple survey to assess the population, and perform simple analyses of survey data. Students will get experience in using the methods via computer practical sessions involving design and analyses of surveys conducted by computer simulation.
Class Hour: To be arranged.
Teaching: 4 lectures, one tutorial and two practical classes each week for 2 weeks.
Assessment: Continuous Assessment = 33%, 2 Hour Examination = 67%

MT5752 Modelling Ecological Dynamics
Credits: 20.0 Semester: 2 (4 weeks)
Prerequisites: at least one MT4000 level module
Anti-requisite: MT4534, MT5834
Description: This module is designed to provide practical training in the construction and use of mathematical models of ecological dynamic systems. The module will start by covering basic dynamical concepts and mathematical tools, and will then cover modelling of individuals, single species populations, interacting populations and ecosystems. At all stages students will be expected to build and analyse models, with a combination of pencil and paper and computer software.
Class Hour: To be arranged.
Teaching: 4 lectures, one tutorial and 3 practicals each week for 4 weeks.
Assessment: Continuous Assessment = 33%, 2 Hour Examination = 67%
MT5753 Statistical Modelling
Credits: 20.0  Semester: 1 (4 weeks)
Prerequisites: at least one MT4000 level module
Anti-requisite: MT4607
Description: This course will introduce the main ideas of linear and generalised linear statistical modelling and will provide training in applied statistical modelling. The course structure is as follows: what statistical models are and what they are for; distributions, point and interval estimation and hypothesis testing; simple linear regression models for normal data; multiple regression; multiple regression with qualitative explanatory variables; less linear models for non-normal data; generalized linear models. Lectures will be built around the book “An Introduction to Statistical Modelling” (Krzanowski, 1998), which closely matches what we believe to be an ideal course structure.
Class Hour: To be arranged.
Teaching: 4 lectures, one tutorial and 3 practicals each week for 4 weeks.
Assessment: Continuous Assessment = 50%, 2 Hour Examination = 50%

MT5757 Advanced Data Analysis
Credits: 20.0  Semester: 1
Prerequisites: MT4607 or MT5753
Description: This module covers modern modeling methods for situations where the data fails to meet the assumptions of common statistical models and simple remedies do not suffice. It represents a lot of real world data. Methods covered include: nonlinear models; basic splines & Generalized Additive Models; Ridge Regression and Principal Components Regression; models for non-independent errors. Pragmatic data imputation is covered with associated issues. Computer intensive inference is considered throughout. Practical applications build sought-after skills in the commercial packages SAS and SPSS.
Class Hour: To be arranged.
Teaching: Lectures, tutorials and practicals.
Assessment: Continuous Assessment = 40%, 2 Hour Examination = 60%

MT5758 Applied Multivariate Analysis
Credits: 15.0  Semester: 2
Anti-requisites: MT4609, MT5705
Prerequisites: Acceptance on to MMath Statistics or MMath Mathematics programmes.
Description: This module provides introductory and advanced training in the applied analysis of multivariate data. The module emphasis is upon practical analysis of data and the extraction of answers from real-life data. Basic theory is given covering matrix algebra, metrics and general measures of similarity. The most common and fundamental methods including dimension reduction and classification are covered e.g. Multivariate Analysis of Variance, Principal Components Analysis, multidimensional scaling, Factor Analysis, clustering methods. The practical component of the module focuses on analysis of real data using the commercial software tools Excel, SAS and SPSS.
Class Hour: To be arranged.
Teaching: Lectures, tutorials and practicals.
Assessment: Continuous Assessment = 60%, 2 Hour Examination = 40%
MT5759 Knowledge Discovery and Data Mining

Credits: 15.0  Semester: 2
Prerequisites: Acceptance on to MMath Statistics or MMath Mathematics programmes.
Description: Contemporary data collection can be automated and on a massive scale e.g. credit card transaction databases. Large databases potentially carry a wealth of important information that could inform business strategy, identify criminal activities, characterize network faults etc. These large scale problems may preclude the standard carefully constructed statistical models, necessitating highly automated approaches.
This module covers many of the methods found under the banner of "Datamining", building from a theoretical perspective but ultimately teaching practical application. Topics covered include: historical/philosophical perspectives, model selection algorithms & optimality measures, tree methods, bagging and boosting, neural nets, and classification in general. Practical applications build sought-after skills in the commercial packages SAS and SPSS.
Class Hour: To be arranged.
Teaching: Lectures, tutorials and practicals.
Assessment: Continuous Assessment = 60%, 2 Hour Examination = 40%

MT5802 Advanced Analytical Techniques

Credits: 20.0  Semester: 2
Prerequisite: MT3503
Description: This module introduces students to some further important applied analytic techniques such as Variational Calculus, Integral equations and transforms, and the theory of Steepest Descent.
Class Hour: 12.00 noon
Teaching: Two lectures and one tutorial.
Assessment: Two-and-a-half Hour Examination = 100%

MT5806 Advanced Computational Techniques

Credits: 20.0  Semester: 2
Prerequisite: MT3802 (or MT4502) and one of either (MT4111 or MT5611) or (MT4112 or MT5612)
Anti-requisite: MT4506
Description: This module introduces students to some of the ideas, techniques and constraints that underpin modern approaches to the numerical modelling of physical processes that may be described by partial differential equations. Students will gain expertise in implementing standard methods and will submit a short dissertation together with a portfolio of computational work.
Class Hour: 12.00 noon
Teaching: Two lectures and one tutorial.
Assessment: Project = 25%, 2 Hour Examination = 75%

MT5809 Advanced Fluid Dynamics

Credits: 20.0  Semester: 1
Prerequisite: MT4509
Description: This module will examine current research in fluid dynamics, with a particular focus on meteorology and oceanography. The large-scale atmosphere and oceans behave quite unlike a ‘classical’ fluid owing to the presence of stable density stratification and rotation. As a result, the fluid motion is dominated by slow, ‘vortical’ or eddying motions (like cyclones) which generally spin slower than the Earth. Superimposed on this slow motion are relatively fast wave-like motions analogous to surface waves on a pond. These lectures describe the mathematical basis of these fundamentally different types of motion, and furthermore illustrate the increasingly important role of computer modelling in this research.
Class Hour: 11.00 am
Teaching: Two lectures and one tutorial.
Assessment: Two-and-a-half Hour Examination = 100%
MT5810 Advanced Solar Theory
Credits: 20.0 Semester: 1
Prerequisite: MT4510
Anti-requisites: MT4504, MT5804
Description: The object of this module is to describe the magnetohydrodynamic processes at work in the Sun, using modern techniques of applied mathematics, and to discuss the latest theories in relation to aspects of current research within the School.
Class Hour: 12.00 noon
Teaching: Two lectures and one tutorial.
Assessment: Two-and-a-half Exam = 100%

MT5813 Advanced Fractal Geometry
Credits: 20.0 Semester: 2
Availability: 2007-08
Prerequisites: one of MT4003, MT4004, MT4005
Anti-requisite: MT4513
Description: This module consists of MT4513 with the addition of tutorials and directed reading on extensions of the subject and more sophisticated mathematical analysis. The aim of this module is to introduce the mathematics used to describe and analyse fractals and to show how the theory may be applied to examples drawn from across mathematics and science. The module discusses the philosophy and scope of fractal geometry; and covers concepts such as dimension, representation of fractals by iterated function systems, fractals in other areas of mathematics such as dynamical systems and number theory, Julia sets and the Mandelbrot set.
Class Hour: 12.00 noon
Teaching: Two lectures and one tutorial.
Assessment: Two-and-a-half Hour Exam = 100%

MT5823 Semigroups
Credits: 20.0 Semester: 2
Availability: 2007-08
Prerequisites: MT4003 (or MT4603) or MT4517
Anti-requisite: MT4523
Description: The general aim of this module is to introduce students to semigroup theory, which is the study of sets with one associative binary operation defined on them. In the process, the common aims and concerns of abstract algebra will be emphasised and illustrated by drawing comparisons between semigroups, groups and rings.
Class Hour: 9.00 am
Teaching: Two lectures and one tutorial.
Assessment: Continuous Assessment = 25%, 2 Hour Exam = 75%

MT5824 Topics in Groups
Credits: 20.0 Semester: 1
Prerequisite: MT4003 (or MT4603)
Description: The overall aim of this module is to build on the foundations established in MT4003/MT4603, and take the students further into this important and beautiful branch of mathematics. More specifically, through a selection of topics, some of which will be of current research interest in St Andrews, it will introduce students to advanced techniques of handling groups and classifying them.
Class Hour: 10.00 am
Teaching: Two lectures and one tutorial.
Assessment: Two-and-a-half Hour Exam = 100%

MT5825 Measure and Ergodic Theory
Credits: 20.0 Semester: 1
Prerequisite: MT4004 (or MT4604)
Anti-requisite: MT4525
Description: This module introduces some of the powerful techniques and ideas of modern mathematical analysis that are important both in analysis in its own right and in its many applications in mathematics and science. The module will include topics such as: measure theory, the ergodic theorem, martingale theory. Analysis is one of the active research areas within the School, and the choice of topics will reflect current activity.
Class Hour: 10.00 am
Teaching: Two lectures and one tutorial.
Assessment: Project =25%, 2 Hour Examination = 75%

MT5826 Finite Fields
Credits: 20.0 Semester: 2
Availability: 2007-08
Prerequisite: MT4516 or MT4517
Description: Fields are an important part of modern algebra. Introduced as a generalization of number systems (in particular the rational and the real numbers), fields are the setting for some of the most fascinating results in pure maths, such as the insolubility of the quintic, and ruler and compass constructions. The theory of finite fields came to prominence in the last 50 years due to its applications in combinatorics, coding theory and cryptography. This module will begin by investigating the theory of fields in general, before specializing to finite fields in particular. Applications of field theory, to topics such as geometry and finite mathematics, will also be explored.
Class Hour: 11.00 am
Teaching: Two lectures and one tutorial.
Assessment: Two-and-a-half Hour Examination = 100%

MT5827 Lie Algebras
Credits: 20.0 Semester: 2
Availability: 2008-09
Prerequisite: MT3501 and (MT4003/MT4603 or MT4517)
Description: The aim of this module is to classify the semi-simple Lie algebras over an algebraically closed field. Lie algebra has important applications to theoretical physics and is used in the classification of finite simple groups.
Class Hour: 11.00 am
Teaching: Two lectures and one tutorial.
Assessment: Two-and-a-half Hour Examination = 100%

MT5828 Hyperbolic Geometry
Credits: 20.0 Semester: 2
Availability: 2008-09
Prerequisite: MT4004 (or MT4604)
Description: This module introduces some of the techniques and ideas of hyperbolic geometry including Fuchsian groups, Kleinian groups, Riemann surfaces, fractal geometry.
Class Hour: 9.00 am
Teaching: Two lectures and one tutorial.
Assessment: Two-and-a-half Hour Examination = 100%
MT5829  Group-Rings
Credits: 20.0  Semester: 2
Programme(s): Optional module for all Postgraduate Taught Programmes within the School of Mathematics & Statistics.
Description: Group rings were introduced as a tool in the representation theory of groups, and then they became objects of independent study. A group ring combines a group and a ring, so it is natural to ask how the properties of the ring and the group determine the properties of the group ring, and vice versa. The main directions of current researches in group ring theory are their ring and Lie properties, the structure of the unit group and the isomorphism problem. After a revision of necessary facts from group theory and ring theory, we will give classical results in each of these four areas; we will also point out some very recent results and open questions.
Class Hour: To be arranged.
Teaching: Two or three lectures and one tutorial.
Assessment: Two-and-a-half Hour Examination = 100%

MT5831  Advanced Bayesian Inference
Credits: 20.0  Semester: 2
Availability: 2008-09
Prerequisite: MT3606
Anti-requisite: MT4531
Description: This module consists of MT4531 with an additional project which will give consideration to some more advanced aspects of the theory or to the application of Bayesian techniques. This may involve either directed reading or the use of the computer for simulation or data-based analyses. The syllabus includes Bayes’ theorem, inference for Normal samples; univariate Normal linear regression; principles of Bayesian computational, Markov chain Monte Carlo – theory and applications.
Class Hour: 10.00 am
Teaching: Two lectures and one tutorial and practical classes.
Assessment: Project = 40%, 2 Hour Examination = 60%

MT5990  Independent Study module
Credits: 20.0  Semester: Either
Prerequisite: Permission of the Head of School
Description: This module provides the opportunity for a student to study an Advanced topic as a reading course under the supervision of a member of staff. The topic will be disjoint from those available in other modules.
Assessment: Two-and-a-half Hour Examination = 100%

MT5991  Professional Skills for Mathematical Scientists
Credits: 30.0  Semester: Whole Year
Programme(s): Graduate Diplomas in Mathematics or, exceptionally, final year of M.Math. programme with the approval of the Head of School.
Description: This module encompasses a range of skills, both generic and topic specific, together with taught components aimed at providing an appreciation of both breadth and depth of research areas in Pure or Applied Mathematics. The precise programme of study, together with the identification of the relevant software expertise required, will be determined in consultation with the student's supervisor.
Class Hour: To be arranged.
Teaching: Lectures, Tutorials and Practical classes
Assessment: Continuous Assessment = 100%
MT5999 Advanced Project in Mathematics/Statistics

Credits: 40.0
Semester: Whole Year

Prerequisite: Entry to an M.Phys. or M.Math. programme

Description: This is a more substantial project which, for M.Math. students, will replace the existing Honours project. The project will be chosen from an approved list of topics. The student will be required to investigate a topic in some depth, submit a report by the end of April and give a presentation.

Assessment: Project = 100%
