**School of Chemistry**

**Important Degree Information:**

**B.Sc./M.A. Honours**
The general requirements are 480 credits over a period of normally 4 years (and not more than 5 years) or part-time equivalent; the final two years being an approved Honours programme of 240 credits, of which 90 credits are at 4000 level and at least a further 120 credits at 3000 and/or 4000 levels. Refer to the appropriate Faculty regulations for lists of subjects recognised as qualifying towards either a B.Sc. or M.A. degree.

For the degree of B.Sc. Chemical Sciences (Honours) the approved Honours programme of 240 credits, requires 90 credits at 4000 level and a further 110 credits (minimum) at 3000 and 4000 levels.

**B.Sc./M.A. Honours with Integrated Year Abroad**
The general requirements are 540 credits over a period of normally 5 years (and not more than 6 years) or part-time equivalent; the final three years being an approved Honours programme of 300 credits, of which 60 credits are gained during the integrated year abroad, 90 credits are at 4000 level and at least a further 120 credits at 3000 and/or 4000 levels. Refer to the appropriate Faculty regulations for lists of subjects recognised as qualifying towards either a B.Sc. or M.A. degree.

**M.Chem. Honours**
General requirements are 600 credits over a period of normally 5 years (and not more than 6 years) or part-time equivalent; the final three years being an approved Honours programme of 360 credits, of which 120 credits are at 5000 level and at least a further 210 credits at 3000 and 4000 levels.

**M.Sci. Honours**
General requirements are 600 credits over a period of normally 5 years (and not more than 6 years) or part-time equivalent; the final three years being an approved Honours programme of 360 credits, of which 120 credits are at 5000 level and at least a further 210 credits at 3000 and 4000 levels.

**Other Information:** Direct entry into Level 2000 is possible, in which case credit of 120 credits at level 1000 is given on the basis of school examinations. In the case of students who spend part of the Honours programme abroad on a recognised Exchange Scheme, the Programme Requirements will be amended to take into account courses taken while abroad.

Chemical Sciences | Chemical Sciences (B.Sc. Honours Degree):  
**Level 1:** 40 credits comprising pass or bypass for CH1001, pass in CH1004 and 4 other level 1000 modules or  
From 2008-09: 60 credits comprising passes in CH1401, CH1402 and CH1601  

**Level 2:** 60 credits comprising passes at 11 or better in CH2101 and CH2102 or CH2103 or  
From 2008-09 : 90 credits comprising passes at 11 or better in CH2501, CH2601 and CH2701  

**Level 3:** 120 credits comprising CH3431, CH3441, CH3511, CH3512, CH3521, CH3611, CH3612, CH3621, CH3711, CH3712, CH3721  

**Level 4:** 120 credits comprising CH4442, 4 from (CH4511, CH4611, CH4612, CH4711), and 4 from (CH4512, CH4613, CH4712, CH4713, CH5513-5, CH5612-4, CH5616, CH5712-4)  

**Other Information:** This course is aimed at those who like Chemistry and were good at it at school, who want the varied training that a Chemistry Degree gives, but who do not wish to be professional Chemists. Up to 40 credits from the Level 3000 and Level 4000 modules listed above can be replaced with modules from other Schools. This course is recognised by the Royal Society of Chemistry (RSC) for professional membership. |
| **(B.Sc. Honours):**  
Chemistry | Chemistry (B.Sc. Honours):  
**Level 1:** 40 credits comprising pass or bypass for CH1001, pass in CH1004 and 4 other level 1000 modules. or  
From 2008-09: 60 credits comprising passes in CH1401, CH1402 and CH1601  

**Level 2:** 90 credits comprising passes at 11 or better in CH2101, CH2102 and CH2103 or  
From 2008-09 : 90 credits comprising passes at 11 or better in CH2501, CH2601 and CH2701  

Students may be allowed to enter this Honours programme with CH2101 and one of CH2102 and CH2103, but some extra work may be required.  

**Level 3:** 120 credits comprising CH3431, CH3441, CH3511, CH3512, CH3521, CH3611, CH3612, CH3621, CH3711, CH3712, CH3721.  

**Level 4:** 120 credits comprising CH4442, CH4461, 2 from (CH4511, CH4611, CH4711), 2 from (CH4512, CH4613, CH4713), either CH4612 or CH4712, and 2 from (CH5513-5, CH5612-4, CH5616, CH5712-4).  

**Other Information:** This course is recognised by the Royal Society of Chemistry (RSC) for professional membership. |

**Level 2:** 60 credits comprising passes at 11 or better in CH2101, either CH2102 or CH2103 or From 2008-09: 60 credits comprising passes at 11 or better in CH2501 and CH2701  
**Level 3:** 60 credits comprising 3 from (CH3431, CH3512, CH3612, CH3621, CH3711, CH3721), 30 credits from (CH3441, CH3511, CH3521, CH3611, CH3712)  
**Level 4:** 60 credits comprising CH4442, 1 or 2 from (CH4511, CH4611, CH4612, CH4711), 1 or 2 from (CH4512, CH4613, CH4712, CH4713)  
**Other Information:** These courses are recognised by the Royal Society of Chemistry (RSC) for professional membership. In total (between the two Schools) 240 credits are required at Level 3 and Level 4 of which at least 90 credits must be achieved at Level 4. |
| (B.Sc. Honours): Chemistry and Geoscience | Chemistry - Geoscience Joint Degree:  
**Level 1:** 40 credits comprising Pass or bypass for CH1001, pass in CH1004 and 40 credits comprising passes in GS1001 and GS1002 or From 2008-09: 60 credits comprising passes in CH1401, CH1402 and CH1601 and 40 credits comprising passes in GS1001 and GS1002  
**Level 2:** 60 credits comprising passes at 11 or better in CH2101, either CH2102 or CH2103 or From 2008-09: 60 credits comprising passes at 11 or better in CH2501 and either CH2601 or CH2701 and 60 credits comprising passes at 11 or better in (GG2003, GG2004, GS2001, and GS2002) or (GS2011 and GS2012)  
**Level 3:** 120 credits comprising CH3431, CH3521, CH3711, CH3511, CH3721, CH4512, and GS3004, normally GS3081* and 1 from (GS4083 or GS4084).  
**Level 4:** 120 credits comprising 3 from (CH4511, CH4611, CH4711, CH4712 and CH5711), CH4448§, CH5515, normally GS4083 or GS4084**, GS4005, GS4010, GS4009, 1 from (GS4088, GS3067, GS3068, GS3069 and GG3082)  
**Other Information:** This course is recognised by the Royal Society of Chemistry (RSC) for professional membership. In total (between the two Schools) 240 credits are required at Level 3 and Level 4 of which at least 90 credits must be achieved at Level 4.  

* With the approval of the Geoscience Adviser of Studies, a student may replace GS3081 and (GS4083 or GS4084) by 2 from GG3067, GG3068, GG3069, GG3082 in semester 2.  
** With the approval of the Geoscience Adviser of Studies, a student may replace GS4083 or GS4084 by a second module from the list GS4088, GG3067, GG3068, GG3069 and GG3082  
§With the approval of the Directors of Teaching, under some circumstances, students might conduct an integrated 35 credit project, ID4441, combining CH4448 with GS4009 and presenting a single, extended report. |

### Modules

Normally the prerequisite for each of the following Honours modules is entry to the Honours Programme(s) for which they are specified, as well as any additional specific prerequisite(s) given.

General degree students wishing to enter 3000 modules and non-graduating students wishing to enter 3000 or 4000 level modules must consult with the relevant Honours Adviser within the School before making their selection.

### InterDisciplinary (ID) Modules

There are modules which relate to this School – – **ID4001 Communication and Teaching in Science** and **ID4441 Combined Chemistry and Geoscience Research Project** and which are interdisciplinary and also appear in the Interdisciplinary Section of the Catalogue (Section 23)

CH3511 Main Group Chemistry
Credits: 10.0  Semester: 2
Description: This module discusses the Chemistry of the elements of groups 2, 12, 13, 15, 17 and 18, with particular reference to systematic trends and to the chemistry of the hydrides, halides, oxides, hydroxides and solid state compounds. In all cases the basic chemistry is linked to the exciting applications of the compounds in fields as diverse as clearing runways from snow in Northern Canada to night vision and metal-containing enzymes. It also explores aspects of solid state Chemistry.

Class Hour: To be arranged.
Teaching: 2 – 3 lectures per week over 5 – 7 weeks and 2-3 tutorials.
Assessment: One-and-a-half Hour Examination = 100%

CH3512 Structural Elucidation and Organometallic Chemistry
Credits: 10.0  Semester: 1
Description: This module will discuss how the use of analytical data and IR and NMR spectroscopy leads to the elucidation of the composition, structure and bonding in inorganic compounds. A variety of case studies will illustrate these principles. In addition, the module offers a systematic introductory treatment of organometallic compounds, emphasising fundamental concepts and the principal functional groups of organometallic chemistry. Topics include: the haptic nomenclature and 18-electron rule; synthesis of complexes of CO, alkyl, alkene, alkyne and carbocyclic ligands; static and dynamic structures; reactions of coordinated ligands; unit processes involved in homogeneous catalytic cycles.

Class Hour: To be arranged.
Teaching: 2 – 3 lectures per week over 5 – 7 weeks and 2-3 tutorials.
Assessment: One-and-a-half Hour Examination = 100%

CH3513 Advanced Solid State Chemistry
Credits: 10.0  Semester: 1
Prerequisite: CH2102
Description: This module on Advanced Solid State Chemistry brings together a number of advanced concepts including advanced crystal chemistry, electronic effects, phase equilibria and extended defects. It is key to the understanding of both modern solid state chemistry and materials science.

Class Hour: To be arranged.
Teaching: 2 – 3 lectures over 7 weeks and three tutorials.
Assessment: One-and-a-half Hour Examination = 100%

CH3521 Inorganic Chemistry Laboratory
Credits: 10.0  Semester: 2
Description: This module comprises practical experiments involving synthesis, characterisation and measurements in inorganic chemistry.

Class Hour: 9.00 am – 12.00 noon Monday to Friday
Teaching: 3 Hours daily for weeks 1 - 6.
Assessment: Continuous Assessment = 100%

CH3611 Physical Organic Chemistry and Pericyclic Chemistry
Credits: 10.0  Semester: 2
Description: The objective of this module is to provide the student with a basic understanding of the physical aspects of organic chemistry. A problem-solving approach is employed in order to develop the ability to elucidate information, both qualitative and quantitative, concerning reaction mechanisms from experimental data. The use of quantum mechanical models of chemical reactivity is introduced, again with an emphasis on problem-solving and practical applications. The concepts developed in the first part of the module are then applied to the description and understanding of pericyclic reactions and stereoelectronic effects – topics which are key in synthetic chemistry.

Class Hour: To be arranged.
Teaching: 2 – 3 lectures per week over 5 – 7 weeks and 2-3 tutorials.
Assessment: One-and-a-half Hour Examination = 100%
CH3612 Synthetic Methodology
Credits: 10.0  Semester: 1
Description: This module aims to develop skills in the general area of synthetic organic chemistry. Students will gain an understanding of the importance of chirality and an appreciation of the preferred conformation of organic molecules. Detailed instruction on reaction mechanisms will be provided and topics in organic synthesis including retrosynthetic analysis, the use of protecting groups and ring forming reactions will be discussed.
Class Hour: To be arranged.
Teaching: 2 – 3 lectures per week over 5 – 7 weeks and 2-3 tutorials.
Assessment: One-and-a-half Hour Examination = 100%

CH3613 Carbohydrate and Nucleic Acid Chemistry
Credits: 10.0  Semester: 2
Description: The aim of the module is to cover aspects of the chemistry of nucleic acids. It will begin with an introduction to carbohydrate chemistry including discussion of biological processes, the synthesis of carbohydrates and carbohydrate-based pharmaceuticals. The structure and chemical synthesis of nucleic acids will then be discussed. The chemical reactivity of DNA and the ways in which it is chemically damaged will be examined. The chemical reactions of DNA will be related to mechanisms of carcinogenesis. The ways in which a range of drugs interact with DNA will be discussed in detail.
Class Hour: To be arranged.
Teaching: 2 – 3 lectures per week over 5 – 7 weeks and 2-3 tutorials.
Assessment: One-and-a-half Hour Examination = 100%

CH3621 Organic Chemistry Laboratory
Credits: 10.0  Semester: 1
Description: Practical experiments involving synthesis, characterisation and measurements in organic chemistry.
Class Hour: 9.00 am - 12.00 noon Monday to Friday.
Teaching: Daily three-hour practical classes over six weeks.
Assessment: Continuous Assessment = 100%

CH3711 Chemical Thermodynamics and an Introduction to Statistical Mechanics
Credits: 10.0  Semester: 1
Prerequisite: CH2102
Description: This module is mainly concerned with the study of thermodynamics. In the first set of lectures the field of classical chemical thermodynamics is addressed, in particular considering chemical equilibria and phase equilibria. In the second set of lectures the molecular basis of thermodynamics is covered in an introduction to the study of statistical mechanics.
Class Hour: To be arranged.
Teaching: 2 – 3 lectures per week over 5 – 7 weeks and 2-3 tutorials.
Assessment: One-and-a-half Hour Examination = 100%

CH3712 Quantum Theory of Atoms, Molecules and Solids
Credits: 10.0  Semester: 2
Prerequisite: CH2102
Description: This module builds on ‘Quantum Theory of Atoms, Molecules and Solids. Part I’ given in CH 2102. It provides an introduction to further, basic concepts of quantum mechanics that are an essential part of the description of the electronic structures of atoms, molecules and solids. While the module is mathematically based, the emphasis throughout is on the physical and chemical implications of the mathematical results and how this provides a coherent, quantitative framework for understanding the beauty and complexities of the electronic structure of atoms, molecules and solids.
Class Hour: To be arranged.
Teaching: 2 – 3 lectures per week over 5 – 7 weeks and 2-3 tutorials.
Assessment: One-and-a-half Hour Examination = 100%
CH3713 Sustainable Chemistry in Relation to the Semiconductor Industry

Credits: 10.0  
Semester: 2  
Availability: Not available 2008-09  
Description: This module focuses on the application of “green chemistry” concepts to the semiconductor and chemical industry. The module will examine the changes employed by the chemical and semiconductor industries in recent years in terms of production methods, cost, and the minimization of waste material. The module will also describe existing legislation as applied to the chemical industries.

Class Hour: To be arranged.
Teaching: 2 – 3 lectures per week over 5 – 7 weeks and 2-3 tutorials.
Assessment: One-and-a-half Hour Examination = 100%

CH3714 Surface Chemistry and Advanced Physical Chemistry

Credits: 10.0  
Semester: 2  
Availability: Not available 2008-09  
Description: This module focuses on the surface properties of the solid state and in particular the chemical interactions between solid state materials and selected adsorbates. The module will also include analytical methods to determine the surface composition and chemical properties of solid state materials that may or may not possess semiconducting properties.

Class Hour: To be arranged.
Teaching: 2 – 3 lectures per week over 5 – 7 weeks and 2-3 tutorials.
Assessment: One-and-a-half Hour Examination = 100%

CH3715 Introduction to analysis of materials

Credits: 10.0  
Semester: 2  
Description: The objective of this module is to introduce the principles of the most popular materials analysis methods using X-ray, ion beams, electrons and diffraction methods. The module will cover analytical principles of X-ray photoelectron spectroscopy (XPS) and Auger electron spectroscopy (AES) together with secondary ion mass spectroscopy (SIMS) and X-ray Diffraction methods (XRD). Diffraction techniques will also be covered with the introductory aspects of Electron Energy Loss Spectroscopy (EELS) together with vibrational spectroscopic techniques.

Class Hour: To be arranged.
Teaching: 2 – 3 lectures per week over 5 – 7 weeks and 2-3 tutorials.
Assessment: One-and-a-half Hour Examination = 100%

CH3716 Quantitative Aspects of Medicinal Chemistry

Credits: 10.0  
Semester: 1  
Description: The aim of the module is to cover some of the quantitative aspects of Medicinal Chemistry and drug design. Initially some relevant fundamental thermodynamics will be discussed. The thermodynamics of the drug receptor interactions will then be covered along with other aspects of pharmacology. The pharmacokinetic phase of drug action will be described including the absorption, distribution, metabolism and elimination (ADME) of drugs. The use of computational chemistry in the modern drug design process will then be discussed, covering force field calculations, molecular docking, QSAR and virtual screening.

Class Hour: To be arranged.
Teaching: 3 lectures per week over 5 weeks and 3 tutorials.
Assessment: One-and-a-half Hour Examination = 100%

CH3721 Physical Chemistry Laboratory

Credits: 10.0  
Semester: 1  
Anti-requisite: CH3722  
Description: This module comprises practical experiments involving physical measurements and the use of computational programmes in Chemistry.

Class Hour: 9.00 am – 12.00 noon or 1.00pm Monday to Friday
Teaching: 3 – 4 hours per day for 5 weeks
Assessment: Continuous Assessment = 100%
CH3722 Materials Laboratory  
Credits: 10.0  Semester: 1  
Anti-requisite: CH3721  
Description: This module comprises practical experiments involving physical measurements and the use of computational programmes in Materials Science.  
Class Hour: 9.00 am – 12.00 noon or 1.00 pm Monday to Friday  
Teaching: 3 – 4 hours per day for 5 weeks  
Assessment: Continuous Assessment = 100%  

CH4441 External Placement  
Credits: 90.0  Semester: Whole Year  
Co-requisite: CH4451 or CH4452 or FR5810  
Description: This module is intended to provide each individual student with direct experience of work in an industrial or similar laboratory. Activities are very varied, according to the nature of the particular company’s or organisation’s area of business. Some students will be engaged in synthetic work and some in analytical/measurement activities. Some will be based exclusively in a laboratory, while others will also be involved in liaison with the company’s plant operators or with its customers.  
Teaching: Day to day supervision by company supervisor, liaising with member of School academic staff.  
Assessment: Continuous Assessment = 100%  

CH4442 Chemistry Research Project  
Credits: 40.0  Semester: Whole Year  
Anti-requisites: CH4443 - CH4448, ID4441  
Description: The research project at Level 4000 aims to develop the students' skills in the following areas: experimental design and problem-solving; abstraction, evaluation and interpretation of data in the chemical literature; practical skills and teamwork; communication of results orally and in a dissertation. The project will be selected and supervised by a member of the academic staff.  
Class Hour: Two days per week, to be arranged.  
Teaching: Laboratory-based research project.  
Assessment: Continuous Assessment = 100%  

CH4443 Chemistry Research Project for Non-graduating Students  
Credits: 45.0  Semester: Either  
Anti-requisites: CH5441, CH4442, CH4444 - CH4448, ID4441  
Description: The research project at Level 4000 only aims to develop the students' skills in the following areas: experimental design and problem-solving; abstraction, evaluation and interpretation of data in the chemical literature; practical skills and teamwork; communication of results orally and in a dissertation. The project will be selected and supervised by a member of the academic staff.  
Class Hour: Two days per week, to be arranged.  
Teaching: Laboratory-based research project.  
Assessment: Continuous Assessment to be arranged.  

CH4444 Chemistry Research Project  
Credits: 60.0  Semester: Either or both  
Anti-requisites: CH5441, CH4442 - CH4443, CH4445 - CH4448, ID4441  
Description: The research project at Level 4000 only aims to develop the students' skills in the following areas: experimental design and problem-solving; abstraction, evaluation and interpretation of data in the chemical literature; practical skills and teamwork; communication of results orally and in a dissertation. The project will be selected and supervised by a member of the academic staff.  
Class Hour: To be arranged.  
Teaching: Laboratory-based research project.  
Assessment: Continuous Assessment = 100%

CH4445 Chemistry Research Project for Non-graduating Students
Credits: 90.0  Semester: Whole Year
Anti-requisites: CH5441, CH4442 - CH4444, CH4446 - CH4448, ID4441
Description: The research project at Level 4000 only aims to develop the students' skills in the following areas: experimental design and problem-solving; abstraction, evaluation and interpretation of data in the chemical literature; practical skills and teamwork; communication of results orally and in a dissertation. The project will be selected and supervised by a member of the academic staff.
Class Hour: To be arranged.
Teaching: Laboratory-based research project.
Assessment: Continuous Assessment = 100%

CH4446 Chemistry Research Project for Non-graduating Students
Credits: 120.0  Semester: Whole Year
Anti-requisites: CH5441, CH4442 - CH4445, CH4447, CH4448, ID4441
Description: The research project at Level 4000 only aims to develop the students' skills in the following areas: experimental design and problem-solving; abstraction, evaluation and interpretation of data in the chemical literature; practical skills and teamwork; communication of results orally and in a dissertation. The project will be selected and supervised by a member of the academic staff.
Class Hour: To be arranged.
Teaching: Laboratory-based research project.
Assessment: Continuous Assessment = 100%

CH4447 Level 4000 Project for Chemistry/Pharmacology
Credits: 40.0  Semester: Whole Year
Anti-requisites: CH4442 - CH4446, CH4448, CH5441, ID4441
Description: The research project at Level 4000 for Chemistry/Pharmacology students only aims to develop the students' skills in the following areas: experimental design and problem-solving; abstraction, evaluation and interpretation of data in the chemical literature; practical skills and teamwork; communication of results orally and in a dissertation. The project will be selected and supervised jointly by members of the academic staff in Chemistry and Biology.
Class Hour: Two days per week, to be arranged.
Teaching: Laboratory-based research project.
Assessment: Continuous Assessment = 100%

CH4448 Chemistry Project for Chemistry and Geoscience
Credits: 20.0  Semester: 1
Anti-requisites: CH4442 – CH4447, CH5441, ID4441
Description: The research project at Level 4000 only aims to develop the students' skills in the following areas: experimental design and problem-solving; abstraction, evaluation and interpretation of data in the chemical literature; practical skills and teamwork; communication of results orally and in a dissertation.
Class Hour: To be arranged.
Teaching: Laboratory-based research project.
Assessment: Continuous Assessment = 100%

CH4451 MChem Distance Learning
Credits: 30.0  Semester: Whole Year
Anti-requisites: CH4511, CH4611, CH4711, CH4452
Co-requisite: CH4441
Description: This module offers the material covered by Level 4000 BSc/MChem modules CH4511, CH4611 and CH4711 in a distance learning mode to students on the MChem one year placement. See the module descriptions for modules CH4511, CH4611 and CH4711 for details of module content.
Teaching: Distance Learning
Assessment: Continuous Assessment = 100%
CH4452 Materials Science Distance Learning
Credits: 30.0  Semester: Whole Year
Availability: 2009-10
Description: This distance learning module allows students to develop an advanced understanding of the basic concepts of Materials Science. It will be delivered in three sections, metals, ceramics and polymers, each approximately equivalent to a normal 10 credit lecture module.
Teaching: Distance Learning
Assessment: Continuous Assessment = 100%

CH4461 Integrating Chemistry
Credits: 10.0  Semester: 1
Anti-requisites: CH4462, CH5461 and CH5462
Description: This is a general chemistry module aimed at developing and consolidating fundamental aspects of basic understanding. Students will be encouraged to gain a deeper understanding of elementary core material by a combination of discussion, general reading, essay work and problem solving at a more advanced level than previously required. Students will be expected to read externally on related topics. In addition, each student will be required to submit an essay which will be on a topic relevant to the broader issues of chemical study and knowledge. The problems will be aimed at Level 4000 standard.
Class Hour: To be arranged.
Teaching: Two classes each week for 9 weeks.
Assessment: Continuous Assessment = 40%, One-and-a-half Hour Examination = 60%

CH4462 Integrating Chemistry for Medicinal Chemistry
Credits: 10.0  Semester: 1
Anti-requisites: CH4461, CH5461 and CH5462
Description: This is a general chemistry module aimed at developing and consolidating fundamental aspects of basic understanding. Students will be encouraged to gain a deeper understanding of elementary core material by a combination of discussion, general reading, essay work and problem solving at a more advanced level than previously required. Students will be expected to read externally on related topics. In addition, each student will be required to submit an essay which will be on a topic relevant to the broader issues of chemical study and knowledge. A proportion of the problems and examples will contain material specifically relevant to medicinal chemistry.
Class Hour: To be arranged.
Teaching: Two classes each week for 9 weeks.
Assessment: Continuous Assessment = 40%, One-and-a-half Hour Examination = 60%

CH4511 Inorganic Reaction Mechanisms and Bioinorganic Chemistry
Credits: 10.0  Semester: 1
Anti-requisite: CH4451
Description: This module aims to develop the students' understanding of the mechanisms that lie behind the reactions of inorganic compounds and to explore the role played by inorganic systems in biology and their growing importance in medicine. There will also be discussion of the mechanisms of action of some inorganic systems in biology which will link the two parts of the module together.
Class Hour: To be arranged.
Teaching: 2 – 3 lectures per week over 5 – 7 weeks and 2-3 tutorials.
Assessment: One-and-a-half Hour Examination = 100%
CH4512 Chemistry in the Natural Environment
Credits: 10.0  Semester: 2
Description: This module is concerned with the role of chemical processes in the Earth’s crust responsible for the development of natural resources, such as minerals and petroleum, and the role of chemistry in their exploitation. The effect of natural and anthropogenic processes on the natural environment will also be discussed, particularly with reference to water chemistry, together with chemical routes to safeguard water quality.
Class Hour: To be arranged.
Teaching: 2 – 3 lectures per week over 5 – 7 weeks and 2-3 tutorials.
Assessment: One-and-a-half Hour Examination = 100%

CH4611 Target Synthesis and Medicinal Chemistry
Credits: 10.0  Semester: 1
Anti-requisite: CH4451
Description: The module will cover aspects of organic chemistry that are important for the synthesis of biologically active compounds such as pharmaceuticals and agrochemicals. Firstly, fundamental aspects of heterocyclic chemistry will be discussed, with a review of the structure, reactivity and synthesis of heterocyclic systems, which is important as the majority of pharmaceuticals and agrochemicals are heterocyclic compounds. The module will then go on to discuss the process of industrial chemical synthesis. This will include the design of synthetic routes, choice of reagents and conditions, as they apply to the development of processes for the synthesis of commercially important molecules.
Class Hour: To be arranged.
Teaching: 2 – 3 lectures per week over 5 – 7 weeks and 2-3 tutorials.
Assessment: One-and-a-half Hour Examination = 100%

CH4612 Blockbuster Pharmaceuticals
Credits: 10.0  Semester: 1
Anti-requisite: CH5615
Description: The module will discuss case studies from the most successful pharmaceutical products. How the compounds came to be discovered, what diseases they are targeting, how they work and how they are made and delivered to the market. Compounds that will feature are aspirin, penicillin, AZT, 5-flourouracil, Zantac, viagra, β-blockers, prozac etc.
Class Hour: To be arranged.
Teaching: 2 – 3 lectures per week over 5 – 7 weeks and 2-3 tutorials.
Assessment: One-and-a-half Hour Examination = 100%

CH4613 Natural Products and Society
Credits: 10.0  Semester: 2
Description: Natural products are low molecular weight compounds produced by plants, fungi and bacteria. They have had a dramatic impact in shaping our society. The module will discuss the impact of natural products in medicine, the food industry and in society more generally. Particular case studies will be covered eg. The discovery and impact of penicillin from a fungal mould, morphine as the most widely prescribed pain killer, taxol from the yew tree as a new generation anticancer compound. The role of natural flavours and fragrances in the food and cosmetics industries will be highlighted as well as the impact of plant alkaloids in medicine.
Class Hour: To be arranged.
Teaching: 2 – 3 lectures per week over 5 – 7 weeks and 2-3 tutorials.
Assessment: One-and-a-half Hour Examination = 100%
CH4711 Physical Chemistry of Solutions
Credits: 10.0  Semester: 1
Anti-requisite: CH4451
Description: This module discusses the physical chemistry of and in solutions. In the first part the thermodynamics of ideal and non-ideal solutions are covered, together with micellar solutions and the chemistry of colloidal suspensions. In the second part solution electrochemistry is covered.
Class Hour: To be arranged.
Teaching: 2 – 3 lectures per week over 5 – 7 weeks and 2-3 tutorials.
Assessment: One-and-a-half Hour Examination = 100%

CH4712 Energy Conversion and Storage
Credits: 10.0  Semester: 2
Description: In our efforts to mitigate global warming it is essential to develop new and improved methods of generation and storage of energy. Foremost among these methods are the electrochemical technologies of batteries and fuel cells. In this module we will discuss the technical details and applications of such devices. Particular emphasis will be placed on the underlying electrochemistry and materials chemistry.
Class Hour: To be arranged.
Teaching: 2 – 3 lectures per week over 5 – 7 weeks and 2-3 tutorials.
Assessment: One-and-a-half Hour Examination = 100%

CH4713 Interactions of Light with Matter
Credits: 10.0  Semester: 2
Description: This module describes the fascinating properties of matter relevant to their interaction with electromagnetic radiation. Absorption, transmission, reflection and diffraction of light across the electromagnetic spectrum is covered. The properties of matter, particularly in the gas and solid phases, which are important for the emission, modification and transport of light are discussed at the atomic and molecular level.
Class Hour: To be arranged.
Teaching: 2 – 3 lectures per week over 5 – 7 weeks and 2-3 tutorials.
Assessment: One-and-a-half Hour Examination = 100%

CH5441 Research Project
Credits: 40.0  Semester: Whole Year
Anti-requisites: CH4443, CH4445, CH4448, ID4441
Description: The research project at Stage 5 of the M.Chem. programme aims to develop the students’ skills in the following areas: experimental design and problem-solving; abstraction, evaluation and interpretation of data in the chemical literature; practical skills and teamwork; communication of results orally and in a dissertation. The project is supervised by a member of the academic staff. The project topic and aims will be selected by both supervisor and student and a literature survey will be carried out.
Class Hour: Two days per week, to be arranged.
Teaching: Laboratory-based research project
Assessment: Continuous Assessment = 100%

CH5461 Integrating Chemistry
Credits: 10.0  Semester: 1
Anti-requisites: CH5462, CH4461, CH4462
Description: This is a general chemistry module aimed at developing and consolidating fundamental aspects of basic understanding. Students will be encouraged to gain a deeper understanding of elementary core material by a combination of discussion, general reading, essay work and problem solving at a more advanced level than previously required. Students will be expected to read externally on related topics. In addition, each student will be required to submit an essay which will be on a topic relevant to the broader issues of chemical study and knowledge. The problems will be aimed at Level 5000 standard.
Class Hour: To be arranged.
Teaching: Two weekly classes over nine weeks.
Assessment: Continuous Assessment = 40%, One-and-a-half Hour Examination = 60%
**Chemistry – Honours 2008/09 – December 2008**

**CH5462 Integrating Chemistry for Medicinal Chemistry**

Credits: 10.0  
Semester: 1

Anti-requisites: CH5461, CH4461, CH4462

Description: This is a general chemistry module aimed at developing and consolidating fundamental aspects of basic understanding. Students will be encouraged to gain a deeper understanding of elementary core material by a combination of discussion, general reading, essay work and problem solving at a more advanced level than previously required. In addition, each student will be required to submit an essay which will be on a topic relevant to the broader issues of chemical study and knowledge. A proportion of the problems and examples will contain material specifically relevant to Medicinal chemistry.

Class Hour: To be arranged.  
Teaching: 2-3 weekly classes over 6-8 weeks.  
Assessment: Continuous Assessment = 40%, One-and-a-half Hour Examination = 60%

**CH5511 Homogeneous Catalysis**

Credits: 10.0  
Semester: 1

Description: This module discusses the use of metal based systems in organic transformations and a detailed treatment of homogeneous catalysis. Important processes in the petrochemicals industry will be used to exemplify the principles described.

Class Hour: To be arranged.  
Teaching: 2 – 3 lectures per week over 5 – 7 weeks and 2-3 tutorials.  
Assessment: One-and-a-half Hour Examination = 100%

**CH5513 Inorganic Rings, Cages and Clusters and Macrocyclic Chemistry**

Credits: 10.0  
Semester: 2

Description: This module discusses the importance of and structural similarities between rings, cages and clusters particularly in main group chemistry. Recognition of cations and anions using macrocycle, cryptand and spherand hosts will be discussed, as will the interaction of neutral molecules with cyclodextrins, calixarenes, cyclophanes and clefts with applications in catalysis and as enzyme mimics. Recent developments in other applications such as molecular electronics and solar energy conversion will be described.

Class Hour: To be arranged.  
Teaching: 2-3 weekly lectures over 5-7 weeks.  
Assessment: One-and-a-half Hour Examination = 100%

**CH5514 Advanced Coordination Chemistry**

Credits: 10.0  
Semester: 2

Description: This is a Masters level module in advanced co-ordination chemistry covering the heavier d-block and f-block metals and also the theory behind bonding, magnetism and electronic spectroscopy in d-block metal complexes. At the end of the module students should be in a position to understand fully the nature of bonding in d- and f-block metal systems, to understand the electronic spectra of d-block complexes and to rationalise trends in chemical properties both down and across the periodic table.

Class Hour: To be arranged.  
Teaching: 2-3 weekly lectures over 5-7 weeks.  
Assessment: One-and-a-half Hour Examination = 100%

**CH5515 Characterisation of Solids**

Credits: 10.0  
Semester: 2

Description: This module aims to describe the most important experimental techniques available for the characterisation of solids, viz. X-ray crystallography, solid-state NMR and transmission electron microscopy. The fundamentals of each technique, together with examples of their applications to inorganic chemistry will be covered.

Class Hour: To be arranged.  
Teaching: 2 – 3 weekly lectures over 5-7 weeks.  
Assessment: One-and-a-half Hour Examination = 100%
CH5611 Asymmetric Synthesis and Retrosynthesis
Credits: 10.0  Semester: 1
Description: This module discusses the methods available for the synthesis of chiral compounds. After a detailed introduction to the specialised terminology and analytical methods used, the main methods using chiral auxiliaries, chiral reagents and chiral catalysts will be described. This will then be combined with a consideration of synthetic strategy and total syntheses of several complex chiral compounds will be discussed.
Class Hour: To be arranged.
Teaching: 2 – 3 lectures per week over 5 – 7 weeks and 2-3 tutorials.
Assessment: One-and-a-half Hour Examination = 100%

CH5612 Natural Products, Biosynthesis and Enzyme Co-factors
Credits: 10.0  Semester: 2
Description: The module will investigate the biosynthesis of the main natural products groups (polyketides, terpenes, alkaloids). Unifying features of their structures and biosynthesis will be described and methods for studying the biosynthesis of natural products will be taught (isotope tracer methods). The common enzyme co-factors (PLP, TPP, NADH, co-enzyme B12) will be highlighted and their mechanistic role in mediating enzymatic transformations will be explored.
Class Hour: To be arranged.
Teaching: 2 –3 weekly lectures over 5-7 weeks.
Assessment: One-and-a-half Hour Examination = 100%

CH5613 Reactive Intermediates
Credits: 10.0  Semester: 2
Description: Aspects of the organic chemistry of the most important reactive intermediates viz.: carbenes, carbanions, free radicals, carbenes, nitrenes and arynes will be covered. Means of generating each type of reactive intermediate will be introduced. The key reactions of each intermediate will be reviewed and their characteristic reactions highlighted. An understanding of the use of each species in organic synthesis and of their significance in mechanistic analysis will be developed.
Class Hour: To be arranged.
Teaching: 2 –3 weekly lectures over 5-7 weeks
Assessment: One-and-a-half Hour Examination = 100%

CH5614 Chemical Biology
Credits: 10.0  Semester: 2
Description: This module will examine new methodologies for drug discovery. An overview of the processes of target discovery, lead discovery and lead optimisation will be given. The use of structural biology (protein crystallography, NMR), computational chemistry and combinatorial chemistry in ‘rational drug design’ will be described. The module will look at the technologies behind combinatorial library design, synthesis and high throughput screening. Broad and focused libraries will be discussed. Several examples will be explored, such as the development of drugs against AIDS and influenza.
Class Hour: To be arranged.
Teaching: 2 –3 weekly lectures over 5-7 weeks.
Assessment: One-and-a-half Hour Examination = 100%

CH5615 Advanced Pharmaceutical Chemistry
Credits: 10.0  Semester: 1
Anti-requisite: CH4612
Description: The module will discuss case studies from the most successful pharmaceutical products. How the compounds came to be discovered, what diseases they are targeting, how they work and how they are made and delivered to the market. Compounds that will feature are aspirin, penicillin, AZT, 5-flourouracil, Zantac, viagra, β-blockers, prozac etc.
Class Hour: To be arranged.
Teaching: Two - three lectures over 5-7 weeks, two tutorials, plus extra directed reading.
Assessment: One-and-a-half Hour Examination = 100%
**CH5616 Molecular Recognition**

**Credits:** 10.0  
**Semester:** 2  
**Description:** This module offers a systematic introductory treatment of molecular recognition, emphasizing fundamental concepts of intermolecular interactions and molecular recognition in solution. The nature, strength and directionality of orbital, hydrogen-bonding and hydrophobic interactions will be explored. Spectroscopic and other techniques for studying these interactions will be outlined with examples.

**Class Hour:** To be arranged.  
**Teaching:** Two - three lectures over 5-7 weeks, two - three tutorials.  
**Assessment:** One-and-a-half Hour Examination = 100%

**CH5711 Advanced Spectroscopic Methods**

**Credits:** 10.0  
**Semester:** 1  
**Description:** This module describes the importance of more advanced spectroscopic methods for the elucidation of structure and properties of increasingly complex molecules and materials. Particular attention will be paid to those techniques which exploit synchrotron radiation.

**Class Hour:** To be arranged.  
**Teaching:** 2–3 lectures per week over 5–7 weeks and 2-3 tutorials.  
**Assessment:** One-and-a-half Hour Examination = 100%

**CH5712 Functional Materials / Electrons in Solids**

**Credits:** 10.0  
**Semester:** 2  
**Description:** The module introduces the physical concepts of dielectrics, semiconductors, and metals. Electronic properties of interfaces and thin films which are fundamental to devices such as microprocessors, lasers in CD players, or solar cells will be discussed.

**Class Hour:** To be arranged.  
**Teaching:** 2-3 lectures over 5-7 weeks.  
**Assessment:** One-and-a-half Hour Examination = 100%

**CH5713 Surface Science and Heterogeneous Catalysis**

**Credits:** 10.0  
**Semester:** 2  
**Description:** The module describes the Chemistry of solid surfaces with particular reference to the structure of metal, oxide and semiconductor surfaces. The techniques available to characterise the uppermost atomic layers of a solid are presented and the novel reactivity of surfaces is linked to applications in sensors, electronic devices, heterogeneous catalysis as well as the processes of corrosion, friction and wear.

**Class Hour:** To be arranged.  
**Teaching:** 2–3 weekly lectures over 5-7 weeks.  
**Assessment:** One-and-a-half Hour Examination = 100%

**CH5714 Statistical Mechanics and Quantum Mechanics**

**Credits:** 10.0  
**Semester:** 2  
**Prerequisites:** CH3711, CH3712  
**Description:** This module builds on 'Statistical Mechanics. Part I', given in CH3712, 'Quantum Theory of Atoms, Molecules and Solids. Part I' given in CH 2102 and 'Quantum Theory of Atoms, Molecules and Solids. Part II' given in CH3711. While the module is mathematically based, the emphasis throughout is on the physical and chemical implications of the mathematical results and how this provides a coherent, quantitative framework for understanding the basis of thermodynamics and the electronic structure of atoms, molecules and solids.

**Class Hour:** To be arranged.  
**Teaching:** 2 –3 weekly lectures over 5-7 weeks.  
**Assessment:** One-and-a-half Hour Examination = 100%
GG3096 Earth System Science: Terrestrial Ecosystems and Environmental Change

Credits: 15  Semester: 2
Prerequisites: GE2011/GE2012 or GS2011/GS2012 or SD2001 or BL2105. Familiarity with basic chemistry and mathematics is desirable, but not essential.

Description: Terrestrial ecosystems play a central role in modulating the flow of energy and materials in the Earth system, regulating trace gas exchange with the atmosphere, the transfer of carbon and nutrients with rivers and oceans, and the natural attenuation of pollutants. Understanding how terrestrial ecosystems function is crucial to addressing problems such as climate change, stratospheric ozone loss, and environmental pollution. This module will develop principles of ecosystems ecology and biogeochemistry, focusing on major elemental cycles, soil processes, and human activity. In addition to students in Geography and Geosciences, this module also welcomes students from Sustainable Development, Biology and Chemistry.

Class Hour: To be arranged.
Teaching: Two lectures and occasional tutorials.
Assessment: Continuous Assessment = 30%, 2 Hour Examination = 70%

ID4001 Communication and Teaching in Science

Credits: 15.0  Semester: 1
Availability: Available only to final year students who have been accepted following interview.

Description: This module is based on the Undergraduate Ambassador Scheme launched in 2002. It provides final year students within the Faculty of Science with the opportunity to gain first hand experience of science education through a mentoring scheme with science teachers in local schools. Students will act initially as observers in the classroom and later as classroom assistants. With permission of the teacher-in-charge, students may also be given the opportunity to lead at least one lesson, or activity within a lesson, during their placement. This module will enable students to gain substantial experience of working in a challenging and unpredictable working environment, and of communicating scientific ideas at various different levels; and to gain a broad understanding of many of the key aspects of teaching science in schools. While of particular value to students aiming for a career in education, these core skills are equally important for any career that requires good communication. Entry to this module is by selection following application and interview during the preceding semester.

Class Hour: Flexible
Teaching: Occasional tutorials and a half-day training session.
Assessment: Continuous Assessment = 100%

ID4441 Combined Chemistry and Geoscience Research Project

Credits: 35.0  Semester: both
Prerequisites: Admission to stage 4 of BSc programme
Anti-requisites: CH4442-CH4448, CH5441

Description: The research project at Level 4000 for Chemistry and Geoscience students only aims to develop the students’ skills in the following areas: experimental design and problem-solving; abstraction, evaluation and interpretation of data in the chemical literature; practical skills and teamwork; communication of results orally and in a dissertation. The project will be selected and supervised jointly by members of the academic staff in Chemistry and Geoscience.

Class Hour: Two days per week.
Teaching: Reflection, laboratory work, library work, written and oral presentation preparation.
Assessment: Continuous Assessment = 100%
