School of Computer Science

Important Degree Information:

B.Sc./M.A. Honours
The general requirements are 480 credits over a period of normally 4 years (and not more than 5 years) or part-time equivalent; the final two years being an approved Honours programme of 240 credits, of which 90 credits are at 4000 level and at least a further 120 credits at 3000 and/or 4000 levels. Refer to the appropriate Faculty regulations for lists of subjects recognised as qualifying towards either a B.Sc. or M.A. degree.

B.Sc./M.A. Honours with Integrated Year Abroad
The general requirements are 540 credits over a period of normally 5 years (and not more than 6 years) or part-time equivalent; the final three years being an approved Honours programme of 300 credits, of which 60 credits are gained during the integrated year abroad, 90 credits are at 4000 level and at least a further 120 credits at 3000 and/or 4000 levels. Refer to the appropriate Faculty regulations for lists of subjects recognised as qualifying towards either a BSc or MA degree.

Other Information: In the case of students who spend part of the Honours programme abroad on a recognised Exchange Scheme, the Programme Requirements will be amended to take into account courses taken while abroad. From 2009/10, the School will participate in ID4001 (Communication and Teaching in Science). This may be taken by Single Honours Computer Science/Internet Computer Science students as an alternative to level 3/level 4 option credits, as shown below.

**Students still completing degree programmes as defined in previous Course Catalogues should discuss their module selections with their Honours Adviser(s).**

### Modules

Normally the prerequisite for each of the following Honours modules is entry to the Honours Programme(s) for which it is specified, as well as any additional specific prerequisite(s) given.

General Degree students wishing to enter 3000-level modules and non-graduating students wishing to enter 3000-level or 4000-level modules must consult with the relevant Honours Adviser within the School before making their selection.
Computer Science (CS) Modules

CS3051 Software Engineering
Credits: 15  Semester: 1
Prerequisites: CS2001 and (CS2002 or CS2003)
Description: This module introduces software engineering through lectures, associated practical work, seminar reports and essays. We define software engineering and consider those attributes of software which distinguish a well-engineered system from a badly-engineered system, concentrating on the differences between large systems and small ones, and introduce some concepts of software design and good programming practice. We will concentrate in particular on object-oriented techniques and Java programming.
Class Hour: 10.00 am Wednesday and Friday and odd Mondays.
Teaching: Two lectures, fortnightly tutorial, two-and-a-half hour practical.
Assessment: Continuous Assessment = 40%, 2 Hour Examination = 60%

CS3099 Software Team Project
Credits: 15  Semester: Whole Year
Availability: Not available to General Degree Students
Prerequisites: CS2001 and (CS2002 or CS2003)
Description: This module aims to allow students to take part in a substantial software engineering project as part of a team, using professional development techniques. Each team will specify, plan, design, implement and document a medium-sized software system under the guidance of a member of staff. Teams are required to cooperate in order to produce successful solutions. Typically, the software system will simulate a real world problem, proposed by the module co-ordinator acting as a customer.
Class Hour: 2.00 - 4.00 pm Friday.
Teaching: Weekly seminars and practical classes.
Assessment: Continuous Assessment = 100%

CS3101 Databases
Credits: 15  Semester: 1
Prerequisites: CS2001 and (CS2002 or CS2003)
Description: This module aims (i) to study data models, indexing techniques and query processing; (ii) to study database systems including concurrency, transactions, distribution and recovery. The syllabus includes: data models; indexing, hashing and query processing; concurrency, transactions and recovery; security and integrity.
Class Hour: 10.00 and 11.00 am Thursday and 10.00 am even Mondays.
Teaching: Two lectures, fortnightly tutorial, two-and-a-half hour practical.
Assessment: Continuous Assessment = 40%, 2 Hour Examination = 60%
CS3102 Data Communications and Networks
Credits: 15 
Prerequisites: CS2001 and (CS2002 or CS2003) 
Description: This module aims (i) to introduce the basics of data communications and computer networks, and (ii) to examine network protocols and architectures. The syllabus includes: the concepts of protocols, layered models, resource sharing and standards; transmission media; analog and digital data encoding; reliable communication; error detection and correction; flow control; link-level efficiency and sliding window protocols; medium access control policies and mechanisms; LAN topologies and extended LANS; network topologies, internetworks and network routing; connection-oriented and connectionless networks; transport level protocols; congestion control; QoS for different traffic types; Study of particular networks and protocols such as the traditional telephone network; the Internet; WiFi, FDDI, Ethernet, ISDN, TCP/IP, ATM. Network programming APIs such as sockets.
Class Hour: 2.00 - 4.30pm Thursday.
Teaching: Two lectures, fortnightly tutorial, two-and-a-half hour practical.
Assessment: Continuous Assessment = 40%, 2 Hour Examination = 60%

CS3103 Graphs and Algorithms
Credits: 15 
Prerequisites: CS2001 and (CS2002 or CS2003) 
Description: This module introduces selected concepts and results of graph theory, from both a theoretical and an algorithmic viewpoint, with a particular emphasis on applications to computer networks. Other theoretical topics relevant to computer networks, such as queuing theory, may also be covered. Using, where appropriate, graph theoretic problems as examples, the module will also teach a range of algorithm design paradigms, such as "divide and conquer" and "dynamic programming".
Class Hour: 12.00 noon Wednesday and Friday and odd Mondays,
Teaching: Two lectures, fortnightly tutorial, two-and-a-half hour practical.
Assessment: Continuous Assessment = 40%, 2 Hour Examination = 60%

CS3104 Operating Systems
Credits: 15 
Prerequisites: CS2001 and (CS2002 or CS2003) 
Description: This module aims (i) to examine in depth the changing role of the operating system; (ii) to study the concept and implementation of process; (iii) to study the OS/hardware interface with regard to storage and protection; (iv) to study the techniques developed to achieve safety and throughput in a multitasking system. The syllabus includes: structured computer organisation; process definition and implementation; interprocess communication and synchronisation; review of scheduling; review of file systems; storage management.
Class Hour: 11.00 am Tuesday and Thursday and even Mondays.
Teaching: Two lectures, fortnightly tutorial, two-and-a-half hour practical.
Assessment: Continuous Assessment = 40%, 2 Hour Examination = 60%

CS3201 Machines and Computation
Credits: 15 
Prerequisites: CS2001 and CS2002 
Description: This module aims to give an understanding of the foundations of computation including the basic issues in language recognition, with applications in areas such as compiler design, and to introduce general models of computation (Turing machines and others) which illustrate the limits of the power of computers.
Class Hour: 11.00 am Wednesday and Friday and odd Mondays.
Teaching: Two lectures, fortnightly tutorial, two-and-a-half hour practical.
Assessment: Continuous Assessment = 40%, 2 Hour Examination = 60%
CS3202 Logic, Specification and Verification
Credits: 15  Semester: 2
Prerequisites: CS2001 and CS2002
Description: Building on earlier coverage of elementary logic, this module covers the topics of formal proof (including induction), software and hardware specification, validation and verification. A tool such as PVS or Coq will be employed in practical work.
Class Hour: 12.00 noon Tuesday and Thursday and even Mondays.
Teaching: Two lectures, fortnightly tutorial, two-and-a-half hour practical.
Assessment: Continuous Assessment = 40%, 2 Hour Examination = 60%

CS3301 Component Technology
Credits: 15  Semester: 2
Prerequisites: CS2001 and CS2003
Description: The module will provide students with a knowledge and understanding of current and emerging component technologies. The module is focused on two major themes: Object-Oriented Middleware (OOM) and Message-Oriented Middleware (MOM). In the first theme we examine the evolution of object-oriented programming into (distributed) component models such as The Common Object Request Broker Architecture (CORBA), The Component Object Model (COM), Java Remote Method Invocation (RMI) and Java Beans. The common underlying requirements of these systems will be studied in detail such as naming and binding issues and marshalling and un-m Marshalling of data. The second theme will explore the emerging field of Message-Oriented Middleware with an in-depth study into current MOM technologies such as Java Messaging System (JMS).
Class Hour: 10.00 am Wednesday and Friday and odd Mondays.
Teaching: Two lectures, fortnightly tutorial, two-and-a-half hour practical.
Assessment: Continuous Assessment = 40%, 2 Hour Examination = 60%

CS3302 Data Encoding
Credits: 15  Semester: 1
Prerequisites: CS2001 and CS2003
Description: This module aims to explain the techniques used to encode data, emphasising in turn the ideas of: security and secrecy, error correcting capabilities, data compression. The syllabus comprises: the weakness of early encryption schemes, the Data Encryption Standard, public key schemes including RSA; attacks on RSA by integer factorisation; Hamming distance, linear codes, parity check equations; Hamming codes, BCH codes; information and uncertainty, run encoding, Huffman encoding.
Class Hour: 12.00 noon Tuesday and Thursday and even Mondays.
Teaching: Two lectures, fortnightly tutorial, two-and-a-half hour practical.
Assessment: Continuous Assessment = 40%, 2 Hour Examination = 60%

CS4051 Professional and Social Aspects of Computing
Credits: 15  Semester: Whole Year
Prerequisite: CS3099
Description: This module aims: (i) to enable students to gain a broad general knowledge of some current research areas in computer science and their application in industry and commerce, and the non-technical factors which may affect decision-making in these areas; (ii) to make students aware of the social implications and ethical problems which may face the users and builders of computer systems; (iii) to develop skills in collecting and communicating information, managing and leading debate and drawing conclusions. It will consist of three parts: (i) a series of seminars will be given and students will be required to write short reports on a certain number of these and take part in a follow-up discussion; (ii) students will be required to write an essay on a current technological, business or social issue in computer science; (iii) students will be required to give an individual or team presentation on a social or professional issue in Computer Science, and lead and manage a follow-up discussion.
Class Hour: 2.00 - 4.30 pm Monday.
Teaching: Individual supervision
Assessment: Continuous Assessment = 100%
CS4098 Minor Software Project

Credits: 15  
Semester: Whole Year

Prerequisite: CS3099

Anti-requisite: CS4099

Description: This module aims to allow students to undertake a substantial software engineering project using professional development techniques. Each student will design, specify and construct a medium-sized software system or undertake a formal development and proof of such a system under the guidance of a member of staff. The syllabus is designed on an individual basis.

Teaching: Individual supervision

Assessment: Continuous Assessment = 100%

CS4099 Major Software Project

Credits: 30  
Semester: Whole Year

Prerequisite: CS3099

Anti-requisite: CS4098

Description: This module aims to allow students to undertake a substantial software engineering project using professional development techniques. Each student will design, specify and construct a medium-sized software system or undertake a formal development and proof of such a system under the guidance of a member of staff. The syllabus is designed on an individual basis.

Teaching: Individual supervision.

Assessment: Continuous Assessment = 100%

CS4101 Artificial Intelligence

Credits: 15  
Semester: 1

Prerequisite: CS3099

Description: This module aims to provide understanding of the general features of the A.I. problem solving process, and in particular to explain the various forms of heuristic together with their implementation and case studies of real systems. The syllabus includes aspects of action and planning, learning, reasoning.

Class Hour: 12.00 noon Tuesday and Thursday and even Mondays.

Teaching: Two lectures, fortnightly tutorial, two-and-a-half hour practical.

Assessment: Continuous Assessment = 40%, 2 Hour Examination = 60%

CS4102 Computer Graphics

Credits: 15  
Semester: 2

Prerequisite: CS3099

Description: The aims of the module are to provide understanding of the fundamental concepts of computer graphics and to develop the ability to apply the concepts to the generation of realistic, synthetic images of 3D objects and scenes. On completion of the module, students should be competent to undertake many tasks in computer graphics, and should have an understanding of the theory underlying many of the relevant techniques. The syllabus includes: 2D graphics: Display technology, perception & colours, basic drawing algorithms, image manipulation; 3D graphics: Coordinate transformation and perspective geometry, hidden surface removal, lighting using local and global illumination models (ray-tracing and radiosity), surface detail (texture and bump mapping), 3D engine overview; Animation: Procedural, spline motion + rotations, articulated models & particle systems, face animation.

Class Hour: 10.00 and 11.00 am Tuesday and 11.00 am even Mondays.

Teaching: Two lectures, fortnightly tutorial, two-and-a-half hour practical.

Assessment: Continuous Assessment = 40%, 2 Hour Examination = 60%
CS4103 Distributed Systems
Credits: 15  Semester: 2
Prerequisites: CS3099 and CS3102
Description: This module aims to help students to understand the fundamentals of distributed systems with reference to system models, programming languages, algorithmic techniques, concurrency and correctness. The syllabus covers synchronisation & mutex problems, atomic transactions, topologies, CSP, Internet programming and distributed computing, distributed mutex and logical time & causality.
Class Hour: 11.00 am Wednesday and Friday and odd Mondays.
Teaching: Two lectures, fortnightly tutorial, two-and-a-half hour practical.
Assessment: Continuous Assessment = 40%, 2 Hour Examination = 60%

CS4104 Human Computer Interaction
Credits: 15  Semester: 1
Prerequisites: CS3099 and CS3051
Description: This module covers the main aspects of Human Computer interaction. Design guidelines, structured design methods and standards are studied and practice is given in implementation and evaluation. Students will have experience of current interactive audio, visual and manipulative technologies.
Class Hour: 2.00 - 4.30 pm Thursday.
Teaching: Two lectures, fortnightly tutorial, two-and-a-half hour practical.
Assessment: Continuous Assessment = 40%, 2 Hour Examination = 60%

CS4201 Programming Language Design and Implementation
Credits: 15  Semester: 1
Prerequisites: CS3099 and CS2002
Description: This module aims to study the design and implementation of programming languages. The syllabus includes: language design principles, abstract syntax, evaluation mechanisms, binding, type systems, polymorphism, data encapsulation, exceptions, formal definition of programming languages, compiling techniques, abstract machine design, run-time systems and garbage collection.
Class Hour: 2.00 - 4.30 pm Friday.
Teaching: Two lectures, fortnightly tutorial, two-and-a-half hour practical.
Assessment: Continuous Assessment = 40%, 2 Hour Examination = 60%

CS4202 Computer Architecture
Credits: 15  Semester: 2
Prerequisites: CS3099, CS3104 and CS2002
Description: This module aims to study the principles and technology of modern computer architectures, with particular emphasis on performance and acceleration. The syllabus consists of: (i) the CPU: pipelined, superscalar, multiprocessor and supercomputer architectures, coprocessors and ASICs, microprogramming; (ii) memory: instruction and data caches; (iii) interconnect architectures: topologies, buses; (iv) performance concepts: latency, bandwidth and analysis; (v) programming models: RISC, CISC, virtual addressing, high-level language support, multiprogramming and multiprocessor consistency; (vi) case studies.
Class Hour: 12.00 noon Wednesday and Friday and odd Mondays.
Teaching: Two lectures, fortnightly tutorial, two-and-a-half hour practical.
Assessment: Continuous Assessment = 40%, 2 Hour Examination = 60%
CS4203 Computer Security
Credits: 15  Semester: 2
Prerequisites: CS3099 and (CS2002 or CS3302)
Description: This module aims to introduce the basic concepts of computer security and cryptography, including common attacks and defences against them, and the legal and policy framework. The syllabus includes: What is security, security applications and policy models. Introduction to access control, typical vulnerabilities. Unix and Internet security, firewalls, intrusion detection, malicious code and countermeasures. Information hiding, Stream ciphers, Block ciphers, Symmetric cryptographic protocols, Asymmetric cryptosystems, Asymmetric cryptographic protocols, Digital signatures, Public key infrastructures, Certification authorities. Security engineering, risk models, robustness, legal and organisational aspects of computer security. Data Protection Act, the Computer Misuse Act, international aspects, export control and key escrow.
Class Hour: 10.00 am Tuesday and Thursday and even Mondays.
Teaching: Two lectures, fortnightly tutorial, two-and-a-half hour practical.
Assessment: Continuous Assessment = 40%, 2 Hour Examination = 60%

CS4302 Multimedia
Credits: 15  Semester: 1
Prerequisites: CS3099 and CS3102
Description: The module will introduce students to the concepts of analogue and digital media and review current standards and technologies used in the production, transport and rendering of digital multimedia. Within the context of networked multimedia the concept of Quality-Of-Service will be introduced and the issues involved in transporting time-sensitive data across computer networks will be explained. Specific examples drawn from Internet-based projects, protocols and standards will be used to illustrate these issues.
Class Hour: 12.00 noon Tuesday and Thursday and even Mondays.
Teaching: Two lectures, fortnightly tutorial, two-and-a-half hour practical.
Assessment: Continuous Assessment = 40%, 2 Hour Examination = 60%

CS4402 Constraint Programming
Credits: 15  Semester: 2
Availability: TBA
Prerequisites: CS3099
Description: This module introduces constraint-based reasoning as a powerful mechanism for knowledge representation and inference. It provides a thorough grounding in the constraint satisfaction/constrained optimization problem (CSP/COP) formalism, and covers both basic techniques for implementing constraint solvers and the use of advanced techniques with a commercial solver.
Class Hour: 11.00 am Tuesday and Thursday and even Mondays.
Teaching: Two lectures, and fortnightly tutorial
Assessment: Continuous Assessment = 40%, 2 Hour Examination = 60%

CS4499 Computer Science (Special Subject)
Credits: 15  Semester: Either
Prerequisites: Entry to the Single Honours Computer Science or Internet Computer Science Honours programme and the consent of the Head of School
Anti-requisite: CS3045
Description: This module is a guided reading module on any aspect of Computer Science not covered by other available modules, intended only for Single Honours students in the School of Computer Science for whom exceptional timetable arrangements (such as a semester or year of absence) restrict the availability of modules unduly.
Class Hour: To be arranged.
Teaching: Tutorials, guided reading, essays, presentations and supervised practicals.
Assessment: Continuous Assessment = 100%
InterDisciplinary (ID) Modules

ID4001 Communication and Teaching in Science

Credits: 15  
Semester: 1  

Availability: Available only to final year students who have been accepted following interview.

Description: This module is based on the Undergraduate Ambassador Scheme launched in 2002. It provides final year students within the Faculty of Science with the opportunity to gain first hand experience of science education through a mentoring scheme with science teachers in local schools. Students will act initially as observers in the classroom and later as classroom assistants. With permission of the teacher-in-charge, students may also be given the opportunity to lead at least one lesson, or activity within a lesson, during their placement. This module will enable students to gain substantial experience of working in a challenging and unpredictable working environment, and of communicating scientific ideas at various different levels; and to gain a broad understanding of many of the key aspects of teaching science in schools. While of particular value to students aiming for a career in education, these core skills are equally important for any career that requires good communication. Entry to this module is by selection following application and interview during the preceding semester.

Class Hour: Flexible

Teaching: Occasional tutorials and a half-day training session.

Assessment: Continuous Assessment = 100%
