</tr>
<tr>
<td>Planned timetable:</td>
<td>9.00 am - 1.00 pm Mon - Fri for 4 weeks.</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

This is a group-based exercise where the students will tackle an unseen problem. Skills to be developed will vary but will include some or all of the following: The use of spectroscopy, retrosynthetic analysis, literature searching, web based searching and design, synthesis, catalysis, mechanistic studies, computational chemistry, surface chemistry, biological chemistry, communication skills.

### Programme module type:
- Compulsory for Chemical Sciences, Chemistry, Chemistry with Medicinal Chemistry, Chemistry with French, Materials Chemistry, Chemistry with Mathematics, Chemistry with Medicinal Chemistry and External Placement, Chemistry with Medicinal Chemistry with External Placement, Chemistry and Physics, Materials Chemistry with External Placement.
- Optional for Chemistry and Mathematics.

### Learning and teaching methods and delivery:
- **Weekly contact:** 4 hours per day 5 days a week
- **Scheduled learning:** 80 hours
- **Guided independent study:** 120 hours

### Assessment pattern:
- **As defined by QAA:**
  - Written Examinations = 0%, Practical Examinations = 60%, Coursework = 40%
- **As used by St Andrews:**
  - 30-minute Practical Examination = 60%, Coursework = 40%

### Module Co-ordinator:
- Dr R A Aitken

### Lecturer(s)/Tutor(s):
- Dr R A Aitken, Dr T Lebl, Prof M Buehl, Dr J A Crayston, Prof P Lightfoot, Prof W Zhou, Prof P A Wright, Prof D Philp, Dr C H Botting

## CH3441 Chemistry Workshop

</tbody>
</table>

The aim of the module is to provide a basis in organic spectroscopy, molecular symmetry and point groups and their application to inorganic spectroscopy, and crystallography and X-ray diffraction. In addition, students will gain experience in chemical information retrieval and searching on-line databases.

### Programme module type:
- Compulsory for Biomolecular Science, Chemical Sciences, Chemistry, Chemistry and Geology, Chemistry with Medicinal Chemistry, Chemistry with External Placement, Chemistry with Medicinal Chemistry and External Placement, Chemistry and Physics.
- Optional for Chemistry and Mathematics, Chemistry with French, Chemistry with French and External Placement, Chemistry with Mathematics.

### Learning and teaching methods and delivery:
- **Weekly contact:** 2 seminars and 1 or 2 lectures, and occasional tutorials
- **Scheduled learning:** 50 hours
- **Guided independent study:** 50 hours

### Assessment pattern:
- **As defined by QAA:**
  - Written Examinations = 0%, Practical Examinations = 100%, Coursework = 0%
- **As used by St Andrews:**
  - 5 x 1-hour Practical Examinations = 100%

### Module Co-ordinator:
- Dr R A Aitken

### Lecturer(s)/Tutor(s):
- Dr R A Aitken, Dr T Lebl, Prof M Buehl, Dr J A Crayston, Prof P Lightfoot, Prof W Zhou, Prof P A Wright, Prof D Philp, Dr C H Botting
### CH3512 Organometallic Chemistry

<table>

</tbody>
</table>

This module offers a systematic introductory treatment of organometallic compounds, emphasising fundamental concepts and the principal functional groups of organometallic chemistry. Topics include: the hapto nomenclature and 18-electron rule; synthesis of complexes of CO, alkyl, alkenes, alkyne and carbocyclic ligands; static and dynamic structures; reactions of coordinated ligands; unit processes involved in homogeneous catalytic cycles.

**Programme module type:** Compulsory for Chemical Sciences, Chemistry, Chemistry with Medicinal Chemistry, Chemistry with External Placement, Chemistry with Medicinal Chemistry and External Placement, Chemistry and Physics

Optional for Chemistry and Mathematics, Chemistry with French, Chemistry with French and External Placement, Chemistry with Mathematics, Materials Chemistry M.Chem.

**Learning and teaching methods and delivery:**

**Weekly contact:** 2 - 3 lectures per week over 5 - 7 weeks and 2 - 3 tutorials in total.

**Scheduled learning:** 17 hours  
**Guided independent study:** 83 hours

**Assessment pattern:**

As defined by QAA:

Written Examinations = 100%, Practical Examinations = 0%, Coursework = 0%

As used by St Andrews: 2-hour Written Examination = 100%

**Module Co-ordinator:** Dr R A Aitken

**Lecturer(s)/Tutor(s):** Prof S P Nolan, Prof P C J Kamer

</tbody>
</table>

This module on Advanced Solid State Chemistry brings together a number of advanced concepts including advanced crystal chemistry, electronic effects, phase equilibria and extended defects. It is key to the understanding of both modern solid state chemistry and materials science.

**Programme module type:** Compulsory for Materials Chemistry, Materials Chemistry with External Placement

**Pre-requisite(s):** CH2501

**Required for:** CH5716

**Learning and teaching methods and delivery:**

**Weekly contact:** 2 - 3 lectures per week over 5 - 7 weeks and 2 - 3 tutorials in total.

**Scheduled learning:** 16 hours  
**Guided independent study:** 84 hours

**Assessment pattern:**

As defined by QAA:

Written Examinations = 100%, Practical Examinations = 0%, Coursework = 0%

As used by St Andrews: 2-hour Written Examination = 100%

**Module Co-ordinator:** Dr R A Aitken

**Lecturer(s)/Tutor(s):** Dr P A Connor

This module aims to develop the student’s understanding of the mechanisms that lie behind the reactions of inorganic compounds. The material will include studies of the different types of reactions that occur at metal centres and how they operate in complex systems such as metal-containing drugs and homogeneous catalysis. A second major component of the module will cover the use of spectroscopic techniques, including multinuclear NMR and EPR, to characterise main group and other inorganic compounds.

**Programme module type:** Compulsory for Chemical Sciences, Chemistry, Chemistry and Geology, Chemistry with Medicinal Chemistry, Materials Chemistry M.Chem., Chemistry with External Placement, Chemistry with Medicinal Chemistry, Chemistry with Medicinal Chemistry and External Placement, Chemistry and Physics.

Optional for Chemistry and Mathematics, Chemistry with French, Chemistry with French and External Placement, Chemistry with Mathematics

**Learning and teaching methods and delivery:**

- **Weekly contact:** 2 - 3 lectures per week over 5 - 7 weeks and 2 - 3 tutorials in total.
- **Scheduled learning:** 18 hours
- **Guided independent study:** 82 hours

**Assessment pattern:**

- **As defined by QAA:** Written Examinations = 100%, Practical Examinations = 0%, Coursework = 0%
- **As used by St Andrews:** 2-hour Written Examination = 100%

**Module Co-ordinator:** Dr R A Aitken

**Lecturer(s)/Tutor(s):** Prof D J Cole-Hamilton, Dr B E Bode

</table>

This module will cover a wide range of synthetic methods and applications of the methods to the synthesis of complex molecules. Students will gain a deep understanding of the importance of methods involving sulfur, phosphorus, boron, silicon, organolithium and organozinc reagents. Students will also be introduced to modern methods of alkene, alkyne and biaryl synthesis using palladium and ruthenium catalysts. The use of the protecting groups in conjunction with these synthetic methods will also be covered.

**Programme module type:**
- Compulsory for Biomolecular Science, Chemical Sciences, Chemistry, Chemistry with Medicinal Chemistry, Chemistry with External Placement, Chemistry with Medicinal Chemistry, Chemistry with Medicinal Chemistry and External Placement
- Optional for Chemistry with French, Chemistry with French and External Placement, Materials Chemistry M.Chem.

**Learning and teaching methods and delivery:**
- Weekly contact: 2 - 3 lectures per week over 5 - 7 weeks and 2 - 3 tutorials in total.
- Scheduled learning: 17 hours  
  Guided independent study: 83 hours

**Assessment pattern:**

</tr>
</tbody>
</table>

The aim of the module is to cover aspects of the chemistry of nucleic acids. It will begin with an introduction to carbohydrate chemistry including discussion of biological processes, the synthesis of carbohydrates and carbohydrate-based pharmaceuticals. The structure and chemical synthesis of nucleic acids will then be discussed. The chemical reactivity of DNA and the ways in which it is chemically damaged will be examined. The chemical reactions of DNA will be related to mechanisms of carcinogenesis. The ways in which a range of drugs interact with DNA will be discussed in detail.

**Programme module type:**
- Compulsory for Biomolecular Science, Chemistry with Medicinal Chemistry, Chemistry with Medicinal Chemistry and External Placement.
- Optional for Materials Chemistry M.Chem.

**Learning and teaching methods and delivery:**
- Weekly contact: 2 - 3 lectures per week over 5 - 7 weeks and 2 - 3 tutorials in total.
- Scheduled learning: 17 hours  
  Guided independent study: 83 hours

**Assessment pattern:**
- As defined by QAA:
  - Written Examinations = 100%, Practical Examinations = 0%, Coursework = 0%
- As used by St Andrews:
  - 2-hour Written Examination = 100%

**Module Co-ordinator:**
- Dr R A Aitken

**Lecturer(s)/Tutor(s):**
- Dr G J Florence, Dr T M Gloster
### CH3615 Mechanism in Organic Chemistry

<table>
<thead>
<tr>
<th>SCOTCAT Credits:</th>

<td>2013/4</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Planned timetable:</td>
<td>To be arranged.</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

The objective of this module is to provide the student with a thorough understanding of the mechanistic aspects of organic chemistry. A problem-solving approach is employed in order to develop the ability to elucidate information, both qualitative and quantitative, concerning reaction mechanisms from experimental data. The module will also focus on the critical role of orbitals in determining the reactivity and selectivity of organic compounds. Reaction mechanism described as a flow of electrons through a correctly aligned orbital manifold will be developed as a tool to explore key topics in synthetic chemistry, with particular emphasis on stereoelectronic effects and aspects of alicyclic chemistry.

Programme module type: Compulsory for Biomolecular Science, Chemical Sciences, Chemistry, Chemistry with Medicinal Chemistry, Chemistry with External Placement, Chemistry with Medicinal Chemistry and External Placement, Chemistry and Physics.

Optional for Chemistry and Mathematics, Chemistry with French, Chemistry with French and External Placement, Chemistry with Mathematics, Materials Chemistry M.Chem.

Learning and teaching methods and delivery: **Weekly contact:** 2 - 3 lectures per week over 5 - 7 weeks and 2 - 3 tutorials in total.

**Scheduled learning:** 17 hours  
**Guided independent study:** 83 hours

Assessment pattern:  
**As defined by QAA:**

Written Examinations = 100%, Practical Examinations = 0%, Coursework = 0%

**As used by St Andrews:**

2-hour Written Examination = 100%

Module Co-ordinator: Dr R A Aitken

Lecturer(s)/Tutor(s): Prof D Philp, Prof A D Smith

</tr>
</tbody>
</table>

This module builds on 'Quantum Theory of Atoms, Molecules and Solids. Part I' given in CH2701. It provides an introduction to further, basic concepts of quantum mechanics that are an essential part of the description of the electronic structures of atoms, molecules and solids. While the module is mathematically based, the emphasis throughout is on the physical and chemical implications of the mathematical results and how this provides a coherent, quantitative framework for understanding the beauty and complexities of the electronic structure of atoms, molecules and solids.

**Programme module type:** Compulsory for Chemical Sciences, Chemistry, Materials Chemistry, Chemistry and Geology, Chemistry with External Placement, Chemistry and Physics, Materials Chemistry with External Placement.

Optional for Chemistry and Mathematics, Chemistry with French, Chemistry with French and External Placement, Chemistry with Mathematics

**Pre-requisite(s):** CH2701

**Required for:** CH5714, PH5022

**Learning and teaching methods and delivery:**
- **Weekly contact:** 2 - 3 lectures per week over 5 - 7 weeks and 2 - 3 tutorials in total.
- **Scheduled learning:** 17 hours
- **Guided independent study:** 83 hours

**Assessment pattern:**
- **As defined by QAA:**
  - Written Examinations = 100%, Practical Examinations = 0%, Coursework = 0%
- **As used by St Andrews:**
  - 2-hour Written Examination = 100%

**Module Co-ordinator:** Dr R A Aitken

**Lecturer(s)/Tutor(s):** Prof P G Bruce, Dr G Haehner
### CH3715 Introduction to Analysis of Materials

**SCOTCAT Credits:** 10  
**SCQF Level:** 9  
**Semester:** 2

**Academic year:** 2013/4

**Planned timetable:** To be arranged.

The objective of this module is to introduce the principles of the most popular materials analysis methods using X-ray, ion beams, electrons and diffraction methods. The module will cover analytical principles of X-ray photoelectron spectroscopy (XPS) and Auger electron spectroscopy (AES) together with secondary ion mass spectroscopy (SIMS) and X-ray Diffraction methods (XRD). Diffraction techniques will also be covered with the introductory aspects of Electron Energy Loss Spectroscopy (EELS) together with vibrational spectroscopic techniques.

**Programme module type:** Compulsory for Materials Chemistry, Materials Chemistry with External Placement.  
Optional for Chemistry and Mathematics, Chemistry with Mathematics

**Learning and teaching methods and delivery:**  
**Weekly contact:** 2 - 3 lectures per week over 5 - 7 weeks and 2 - 3 tutorials in total.  
**Scheduled learning:** 17 hours  
**Guided independent study:** 83 hours

**Assessment pattern:**  
**As defined by QAA:**  
Written Examinations = 100%, Practical Examinations = 0%, Coursework = 0%  
**As used by St Andrews:**  
2-hour Written Examination = 100%

**Module Co-ordinator:** Dr R A Aitken

**Lecturer(s)/Tutor(s):** Dr R T Baker

---

### CH3716 Quantitative Aspects of Medicinal Chemistry

**SCOTCAT Credits:** 10  
**SCQF Level:** 9  
**Semester:** 1

**Academic year:** 2013/4

**Planned timetable:** To be arranged.

The aim of the module is to cover some of the quantitative aspects of Medicinal Chemistry and drug design. Initially some relevant fundamental thermodynamics will be discussed. The thermodynamics of the drug receptor interactions will then be covered along with other aspects of pharmacology. The pharmacokinetic phase of drug action will be described including the absorption, distribution, metabolism and elimination (ADME) of drugs. The use of computational chemistry in the modern drug design process will then be discussed, covering force field calculations, molecular docking, QSAR and virtual screening.

**Programme module type:** Compulsory for Biomolecular Science, Chemistry with Medicinal Chemistry, Chemistry with Medicinal Chemistry and External Placement

**Anti-requisite(s):** CH3717

**Learning and teaching methods and delivery:**  
**Weekly contact:** 2 - 3 lectures per week over 5 - 7 weeks and 2 - 3 tutorials in total.  
**Scheduled learning:** 18 hours  
**Guided independent study:** 82 hours

**Assessment pattern:**  
**As defined by QAA:**  
Written Examinations = 100%, Practical Examinations = 0%, Coursework = 0%  
**As used by St Andrews:** 2-hour Written Examination = 100%

**Module Co-ordinator:** Dr R A Aitken

**Lecturer(s)/Tutor(s):** Dr T Van Mourik, Dr F M Gray, Dr N J Westwood
### CH3717 Statistical Mechanics and Computational Chemistry

**SCOTCAT Credits:** 10  
**SCQF Level:** 9  
**Semester:** 1

**Academic year:** 2013/4  
**Planned timetable:** To be arranged.

This module combines the study of statistical mechanics with an introduction to theoretical and computational methods as applied in modern chemistry. In the first set of lectures the molecular basis of thermodynamics is covered in an introduction to the study of statistical mechanics. The use of computational chemistry in the modern drug design process will then be discussed, covering force field calculations, molecular docking, QSAR and virtual screening.

**Programme module type:** Compulsory for Chemical Sciences, Chemistry, Chemistry and Geology, Materials Chemistry, Chemistry with External Placement, Chemistry and Physics, Materials Chemistry with External Placement. Optional for Chemistry and Mathematics, Chemistry with French, Chemistry with French and External Placement, Chemistry with Mathematics

**Anti-requisite(s):** CH3716

**Required for:** CH5714

**Learning and teaching methods and delivery:** Weekly contact: 2 - 3 lectures per week over 5 - 7 weeks and 2 - 3 tutorials in total.  
Scheduled learning: 17 hours  
Guided independent study: 83 hours

**Assessment pattern:**  
As defined by QAA: Written Examinations = 100%, Practical Examinations = 0%, Coursework = 0%

As used by St Andrews: 2-hour Written Examination = 100%

**Module Co-ordinator:** Dr R A Aitken

**Lecturer(s)/Tutor(s):** Dr C J Baddeley, Dr T van Mourik

---

### CH3721 Physical Chemistry Laboratory

**SCOTCAT Credits:** 10  
**SCQF Level:** 9  
**Semester:** 1

**Academic year:** 2013/4  
**Planned timetable:** 9.00 am - 12.00 noon or 1.00 pm Mon to Fri

This module comprises practical experiments involving physical measurements and the use of computational programmes in Chemistry.

**Programme module type:** Compulsory for Chemical Sciences, Chemistry, Chemistry and Geology, Chemistry with Medicinal Chemistry, Chemistry with External Placement, Chemistry with Medicinal Chemistry and External Placement, Chemistry and Physics. Optional for Chemistry and Mathematics, Chemistry with French, Chemistry with French and External Placement, Chemistry with Mathematics

**Anti-requisite(s):** CH3722

**Learning and teaching methods and delivery:** Weekly contact: 3 - 4 hours per day for 5 weeks.  
Scheduled learning: 90 hours  
Guided independent study: 10 hours

**Assessment pattern:**  
As defined by QAA: Written Examinations = 0%, Practical Examinations = 0%, Coursework = 100%

As used by St Andrews: Coursework = 100%

**Module Co-ordinator:** Dr R A Aitken

**Lecturer(s)/Tutor(s):** Prof P A Wright, Prof M Buck, Dr R Schaub, Dr T van Mourik
### CH4441 External Placement

<table>
<thead>
<tr>
<th>SCOTCAT Credits:</th>
<th>90</th>
<th>SCQF Level: 10</th>
<th>Semester:</th>
<th>Whole Year</th>
</tr>
</thead>
</table>

**Academic year:** 2013/4

**Planned timetable:** Please Contact School

This module is intended to provide each individual student with direct experience of work in an industrial or similar laboratory. Activities are very varied, according to the nature of the particular company’s or organisation’s area of business. Some students will be engaged in synthetic work and some in analytical/measurement activities. Some will be based exclusively in a laboratory, while others will also be involved in liaison with the company’s plant operators or with its customers.

**Programme module type:** Compulsory for Chemistry with External Placement, Chemistry with French with External Placement, Chemistry with Medicinal Chemistry and External Placement, Materials Chemistry with External Placement

**Co-requisite(s):** CH4451 or CH4452 or FR5810

**Learning and teaching methods and delivery:**

- **Weekly contact:** Day-to-day supervision by company supervisor, liaising with member of School academic staff.

**Scheduled learning:** 0 hours  
**Guided independent study:** 0 hours

**Assessment pattern:**

- As defined by QAA:  
  - Written Examinations = 0%, Practical Examinations = 0%, Coursework = 100%

- As used by St Andrews: Coursework = 100%

**Module Co-ordinator:** Dr R A Aitken

### CH4442 Chemistry Research Project

<table>
<thead>
<tr>
<th>SCOTCAT Credits:</th>
<th>50</th>
<th>SCQF Level: 10</th>
<th>Semester:</th>
<th>Whole Year</th>
</tr>
</thead>
</table>

**Academic year:** 2013/4

**Planned timetable:** 2 days per week, to be arranged.

The research project at Level 4000 aims to develop the students’ skills in the following areas: experimental design and problem-solving; abstraction, evaluation and interpretation of data in the chemical literature; practical skills and teamwork; communication of results orally and in a dissertation. The project will be selected and supervised by a member of the academic staff. (Guidelines for printing and binding dissertations can be found at: [http://www.st-andrews.ac.uk/printanddesign/dissertation/](http://www.st-andrews.ac.uk/printanddesign/dissertation/))

**Programme module type:** Compulsory for Biomolecular Science, Chemical Sciences, Chemistry and Mathematics, Chemistry with Medicinal Chemistry, Chemistry with French, Materials Chemistry, Chemistry with Mathematics

**Anti-requisite(s):** CH4443 - CH4448, ID4441

**Learning and teaching methods and delivery:**

- **Weekly contact:** Laboratory-based research project.

**Scheduled learning:** 360 hours  
**Guided independent study:** 40 hours

**Assessment pattern:**

- As defined by QAA:  
  - Written Examinations = 20%, Practical Examinations = 0%, Coursework = 80%

- As used by St Andrews:  
  - 1-hour Practical Examination = 20%, Coursework = 80%

**Module Co-ordinator:** Dr R A Aitken

The research project at Level 4000 only aims to develop the students' skills in the following areas: experimental design and problem-solving; abstraction, evaluation and interpretation of data in the chemical literature; practical skills and teamwork; communication of results orally and in a dissertation. The project will be selected and supervised by a member of the academic staff. (Guidelines for printing and binding dissertations can be found at: [http://www.st-andrews.ac.uk/printanddesign/dissertation/](http://www.st-andrews.ac.uk/printanddesign/dissertation/))

This module offers the material covered by Level 4000 B.Sc./M.Chem. modules CH4514, CH4614 and CH4714 in a distance-learning mode to students on the M.Chem. one-year placement. See the module descriptions for modules CH4514, CH4614 and CH4714 for details of module content.

**Programme module type:** Compulsory for Chemistry with External Placement, Chemistry with Medicinal Chemistry and External Placement

**Anti-requisite(s):** CH4514, CH4614, CH4714

**Co-requisite(s):** CH4441

**Learning and teaching methods and delivery:**

- **Weekly contact:** Distance Learning
- **Guided independent study:** 300 hours

**Assessment pattern:**

- **As defined by QAA:**
  - Written Examinations = 0%, Practical Examinations = 0%, Coursework = 100%

This module covers the heavier d-block and f-block metals and also the theory behind bonding, magnetism and electronic spectroscopy in d-block metal complexes. At the end of the module the students should be in a position to understand fully the nature of bonding in d- and f-block metal systems, to understand the electronic spectra of d-block complexes and to rationalise trends in chemical properties both down and across the periodic table. The module also aims to explore the role played by inorganic systems in biology and their growing importance in medicine. There will also be discussion of the mechanisms of action of some inorganic systems in biology.

Programme module type: Compulsory for Chemical Sciences, Chemistry, Chemistry with Medicinal Chemistry, Chemistry with French M.Chem., Materials Chemistry Optional for Chemistry and Geology, Chemistry and Mathematics, Chemistry with French B.Sc., Chemistry with Mathematics

Anti-requisite(s): CH4451, CH4511

Learning and teaching methods and delivery: Weekly contact: 2 - 3 lectures per week over 5 - 7 weeks and 2 - 3 tutorials in total.

This module discusses the importance of and structural similarities between rings, cages and clusters particularly in main group chemistry. The general rules for predicting geometry in cage/cluster systems will be introduced and used to provide a framework for the range of systems to be discussed e.g. boranes, Zintl anions, phosphides. Further advanced topics in s and p block chemistry will be introduced, for example the stabilisation of heavier main group multiple bonds, low coordinate main group element centres, biradicaloids and use of weakly coordinating anions.

**Programme module type:** Compulsory for Materials Chemistry, Chemistry with Medicinal Chemistry M.Chem.
Optional for Chemical Sciences, Chemistry, Chemistry and Mathematics, Chemistry with French, Chemistry with Mathematics

**Anti-requisite(s):** CH5513

**Learning and teaching methods and delivery:**

- Weekly contact: 2 - 3 lectures per week over 5 - 7 weeks and 2 tutorials in total.

- **Scheduled learning:** 20 hours
- **Guided independent study:** 80 hours

**Assessment pattern:**

The module will discuss case studies from the most successful pharmaceutical products. How the compounds came to be discovered, what diseases they are targeting, how they work and how they are made and delivered to the market. Compounds that will feature are aspirin, penicillin, AZT, 5-flourouracil, Zantac, viagra, ß-blockers, prozac etc.

**Programme module type:** Compulsory for Chemistry with Medicinal Chemistry.
Optional for Biomolecular Science, Chemical Sciences, Chemistry and Mathematics, Chemistry M.Chem., Chemistry with French, Chemistry with Mathematics

**Anti-requisite(s):** CH5615

**Learning and teaching methods and delivery:**

**Module Co-ordinator:** Dr R A Aitken

**Lecturer(s)/Tutor(s):** Prof D O’Hagan and visiting industrial lecturers
This module covers the important areas of heterocyclic and pericyclic chemistry in detail. In heterocyclic chemistry, the nomenclature and numbering of single and fused ring systems, and structure, reactivity, synthesis and applications of the main five and six-membered ring systems with one and two heteroatoms will be covered. Selected industrial syntheses of heterocyclic medicinal compounds are used to illustrate the basic principles as well as the factors to be considered in large scale synthesis. In pericyclic chemistry, a frontier molecular orbital approach based on the Woodward Hoffmann rules will be applied to pericyclic reactions and used to provide an understanding of the energetics and stereochemistry of Diels Alder and 1,3-dipolar cycloaddition reactions as well as electrocyclic processes and sigmatropic rearrangements. Synthetic applications of these processes will also be illustrated.
## CH4615 Fragrance, Food and Colour Chemistry

This module considers three areas where applications of organic chemistry have been able to benefit society and given rise to important industries. The fragrance, perfumery and food flavouring industry will be covered from the early extraction of essential oils to the modern marketplace with an overview of the key structural features required for perfumes and flavours and some major manufacturing processes. The chemical constituents of food will be considered with an emphasis on health effects and the molecular mechanism of antioxidants, vitamins and other food constituents. The chemistry of organic dyes and pigments will be discussed including the historical development of colour compounds and how these affected society and art. Coloured compounds in nature will also be discussed.

This module describes the fascinating properties of matter relevant to their interaction with electromagnetic radiation. Absorption, transmission, reflection and diffraction of light across the electromagnetic spectrum is covered. The properties of matter, particularly in the gas and solid phases, which are important for the emission, modification and transport of light are discussed at the atomic and molecular level.

The research project at Stage 5 of the M.Chem. programme aims to develop the students' skills in the following areas: experimental design and problem-solving; abstraction, evaluation and interpretation of data in the chemical literature; practical skills and teamwork; communication of results orally and in a dissertation. The project is supervised by a member of the academic staff. The project topic and aims will be selected by both supervisor and student and a literature survey will be carried out.(Guidelines for printing and binding dissertations can be found at: http://www.st-andrews.ac.uk/printanddesign/dissertation/)

</table>

Phosphines and carbenes represent the most common ligands used in many applications of metal complexes. Recent developments have allowed very precise design of properties of complexes as a result of new ligand design. In this module design principles will be addressed and applications of these important complexes in industry will be discussed.

**Learning and teaching methods and delivery:**

- **Weekly contact:** 2 - 3 lectures per week over 5 - 7 weeks and 2 - 3 tutorials in total.
- **Scheduled learning:** 20 hours
- **Guided independent study:** 80 hours

**Assessment pattern:**

- **As defined by QAA:**
  - Written Examinations = 100%, Practical Examinations = 0%, Coursework = 0%
- **As used by St Andrews:** 2-hour Written Examination = 100%

**Module Co-ordinator:** Dr R A Aitken

**Lecturer(s)/Tutor(s):** Prof P C J Kamer, Dr C S J Cazin

This module covers two major topics. The first deals with modern materials which have a major impact on our lives, focusing on how the material's structure influences its electrical, magnetic and thermal properties. In the second section, emphasis will be placed on metal organic frameworks and how they can be used for the storage and release of gases.

Learning and teaching methods and delivery: Weekly contact: 2 - 3 lectures per week over 5 - 7 weeks and 2 - 3 tutorials in total.

Scheduled learning: 20 hours Guided independent study: 80 hours

Assessment pattern: As defined by QAA:
Written Examinations = 100%, Practical Examinations = 0%, Coursework = 0%

As used by St Andrews: 2-hour Written Examination = 100%

Module Co-ordinator: Dr R A Aitken

This module discusses the methods available for the synthesis of chiral compounds. After a detailed introduction to the specialised terminology and analytical methods used, the main methods using chiral auxiliaries, chiral reagents and chiral catalysts will be described. This will then be combined with a consideration of synthetic strategy and total syntheses of several complex chiral compounds will be discussed.

Learning and teaching methods and delivery: Weekly contact: 2 - 3 lectures per week over 5 - 7 weeks and 2 - 3 tutorials in total.

Scheduled learning: 20 hours Guided independent study: 80 hours

Assessment pattern: As defined by QAA:
Written Examinations = 100%, Practical Examinations = 0%, Coursework = 0%

As used by St Andrews: 2-hour Written Examination = 100%

Module Co-ordinator: Dr R A Aitken

The module will investigate the biosynthesis of the main natural products groups (polyketides, terpenes, alkaloids). Unifying features of their structures and biosynthesis will be described and methods for studying the biosynthesis of natural products will be taught (isotope tracer methods). The common enzyme co-factors (PLP, TPP, NADH, co-enzyme B12) will be highlighted and their mechanistic role in mediating enzymatic transformations will be explored.

</table>

Aspects of the organic chemistry of the most important reactive intermediates viz.: carbo-cations, carbanions, free radicals, carbenes, nitrenes and arynes will be covered. Means of generating each type of reactive intermediate will be introduced. The key reactions of each intermediate will be reviewed and their characteristic reactions highlighted. An understanding of the use of each species in organic synthesis and of their significance in mechanistic analysis will be developed.

This module will examine new methodologies for drug discovery. An overview of the processes of target discovery, lead discovery and lead optimisation will be given. The use of structural biology (protein crystallography, NMR), computational chemistry and combinatorial chemistry in 'rational drug design' will be described. The module will look at the technologies behind combinatorial library design, synthesis and high throughput screening. Broad and focused libraries will be discussed. Several examples will be explored, such as the development of drugs against AIDS and influenza.

**Programme module type:**
- Compulsory for Chemistry with Medicinal Chemistry M.Chem., Chemistry with Medicinal Chemistry and External Placement.
- Optional for Biomolecular Science, Chemical Sciences, Chemistry with Medicinal Chemistry B.Sc., Chemistry with French M.Chem., Chemistry with External Placement, Chemistry with French and External Placement, Chemistry with Mathematics

**Learning and teaching methods and delivery:**
**Weekly contact:** 2 - 3 lectures per week over 5 - 7 weeks and 2 - 3 tutorials in total.

This module offers a systematic introductory treatment of molecular recognition, emphasising fundamental concepts of intermolecular interactions and molecular recognition in solution. The nature, strength and directionality of orbital, hydrogen-bonding and hydrophobic interactions will be explored. Spectroscopic and other techniques for studying these interactions will be outlined with examples.

**Programme module type:**
- Compulsory for Chemistry with Medicinal Chemistry M.Chem., Chemistry with Medicinal Chemistry and External Placement.
- Optional for Biomolecular Science, Chemical Sciences, Chemistry with Medicinal Chemistry B.Sc., Chemistry with French M.Chem., Chemistry with External Placement, Chemistry with French and External Placement, Chemistry with Mathematics

The module describes the Chemistry of solid surfaces with particular reference to the structure of metal, oxide and semiconductor surfaces. The techniques available to characterise the uppermost atomic layers of a solid are presented and the novel reactivity of surfaces is linked to applications in sensors, electronic devices, heterogeneous catalysis as well as the processes of corrosion, friction and wear.

**Programme module type:** Compulsory for Chemistry with Mathematics.

**Learning and teaching methods and delivery:**

- **Weekly contact:** 2 - 3 lectures per week over 5 - 7 weeks and 2 - 3 tutorials in total.

This module will build on the foundations laid in CH2701 and CH3712 and introduce further aspects and methods of modern computational chemistry related to the electronic structures of atoms and molecules. It will be shown how results of such calculations can be used to complement, interpret, and guide experiments in many areas of chemistry.

**Pre-requisite(s):** CH3712, CH3717

**Learning and teaching methods and delivery:**

- **Weekly contact:** 2 - 3 lectures per week over 5 - 7 weeks and 2 - 3 tutorials in total.
- **Scheduled learning:** 20 hours  
  **Guided independent study:** 80 hours

**Assessment pattern:**

In our efforts to mitigate global warming it is essential to develop new and improved methods of generation and storage of energy. Foremost among these methods are the electrochemical technologies of batteries and fuel cells. In this module we will discuss the technical details and applications of such devices. Particular emphasis will be placed on the underlying electrochemistry and materials chemistry.

**Programme module type:** Optional for Chemistry

**Anti-requisite(s):** CH4712

**Learning and teaching methods and delivery:**

- **Weekly contact:** 2-3 weekly lectures over 5-7 weeks.
- **Scheduled learning:** 20 hours  
  **Guided independent study:** 80 hours

**Assessment pattern:**

- **As defined by QAA:**  
  Written Examinations = 100%, Practical Examinations = 0%, Coursework = 0%

- **As used by St Andrews:** 2-hour Written Examination = 100%

</table>

This module focuses on the processing of materials. Fundamental materials properties such as crystallinity, composition, crystal phase, phase mixing, domain structure, grains and grain boundaries, porosity and pore structure will be covered and the main methods used to control these properties in order to develop and improve materials for specific applications will be addressed. Processes including casting, extrusion, physical and chemical vapour deposition, calcination, sintering, annealing, plasma treatments, mechanical working, crystallisation and dopant addition will be described and explained. Applications in high-value metals, ceramics and semiconductor materials will be emphasised.

</table>

This module will introduce the concepts and science behind the design and synthesis of a wide range of nanostructures and the application of these structures in functional materials and devices. The relationship between nanoscale structure and composition and macroscale properties and behaviour will be emphasised. Structures will be classified and introduced in terms of their number of dimensions: clusters, nanoparticles and quantum dots (0-D); nanotubes, nanowires and nanorods (1-D); nanosheets and films (2-D); and porous crystals, mesoporous structures and metal-organic frameworks (3-D). Other specific topics will include the science of clusters, molecular assemblies and assemblies of nanostructures. Novel carbon based materials, including simple and functionalised fullerenes, carbon nanotubes and graphene and related materials will be described and their physical and chemical properties related to their structure and bonding. Advanced characterisation techniques and applications related to nanotechnology, MEMs, biomaterials, catalysis, and optical and magnetic devices will be addressed.

| Optional for Chemical Sciences, Chemistry and Geology, Chemistry M.Chem., Chemistry with French M.Chem., Chemistry with External Placement, Chemistry with French and External Placement, Chemistry with Mathematics, Chemistry and Physics |
| Learning and teaching methods and delivery: | **Weekly contact:** 2 - 3 lectures per week over 5 - 7 weeks and 2 - 3 tutorials in total. |
