

How to download the notebook questions.nb

This is a short talk-through on how to download the *Mathematica* notebook questions.nb for each week.

Open the program *Mathematica* before you press the "Questions" button.

(This will save you the trouble of being asked for an activation key later on.)*

Press the button and you will see this icon:

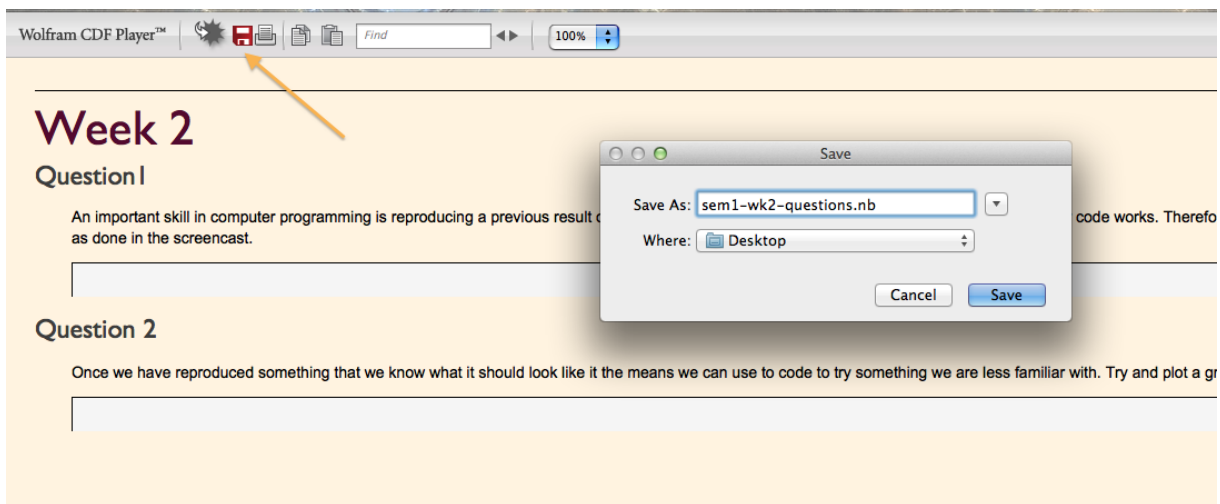

OR

meaning that your computer is getting ready to download the file.

The first time round, it could be a process lasting up to 20 seconds (- a program called CDF will be loaded). Sometimes nothing else happens for a while; when your patience is running out, try clicking on this icon or hit the refresh-page-button on your browser, to get things moving in the right direction. When downloading a second *Mathematica* notebook it should only take a moment.

After this, you are referred to the Wolfram CDF (Computable Document Format) Player, looking like this:

Here you need to click on the button for "download" and then save the notebook in a directory of your choice. You might need to add .nb to the end of the filename.

Now open your notebook within *Mathematica*, answer the questions, save it (with your name in the filename) and upload it onto Moodle.

* Should you have forgotten to open the program *Mathematica* first and gotten the message: Enter your Activation Code, close the message, close CDF and start again, this time opening *Mathematica* first.
