## Common reporting scale

The University uses a 20-point common reporting scale for **grades**. A grade is attached to a module and provides a numeric value between 0 and 20 (to one decimal place) to express the final outcome of a module. Grades awarded to modules allow for comparisons to be made across the University: a particular grade can be viewed as representing the same standing of achievement at the same level of study in any subject.

**Marks** are given to individual pieces of work: essays, dissertations, exam questions and so on. This marking will often be out of 20 but need not be, as some Schools, or some assignments, need another (e.g. percentage) scale. A conversion procedure is then applied to produce a grade on the 20-point scale once the module is completed.

Schools that use a marking scale other than 0-20, will publish in their handbooks the procedures that will be used for marking, and for conversion of marks to final grades.

As a rough guide only, the following Common reporting scale table describes each grade as a classification equivalent. The grades shown in italics mark the thresholds for the boundaries between classifications. Degree classification itself is dependent on an algorithm taking account of all eligible grades. Further information on degree classification may be found at: [Honours classification](#) and [PGT Masters classification](#).
